1. INTRODUCTION

The Leota Claim Block (“LCB”) is situated 25 to 50 kilometers east to southeast of Dawson City in the Yukon Territory. It consists of 1018 contiguous, un-surveyed, Quartz mining claims covering an area of over 210 square kilometers. LCB is bordered in the north and east by the Klondike River and Minnie Bell Creek and in the south by the Hunker and Dominion Creeks and forms an eastern portion of the historical Klondike Goldfields. The LCB owners M. Pocklington (50%) of Edmonton and R. Weitzel (50%) of Whitehorse optioned the claims in 2010 to Goldbank Mining Corporation (Goldbank) of Vancouver, and since then Goldbank had acquired a 75 % interest in the Leota Property.

A soil and rock geochemistry program was carried out on the LCB claims from August to October, 2012 with the objectives to expand the 2011 grids, to test extensions of the precious and base metal anomalies, to search for and sample new outcrops, and to record the structural data.

The writer of this report designed, supervised and took part in the 2012 fieldwork. The soil grids consisted of north - south and/or east – west running lines spaced 100 meters and stations 25 meters apart. The rock samples were collected from outcrops or historical pits or trenches within and outside the grids. A GPS unit was used to locate stations and sample sites and to record coordinates. A total of 747 soil samples and 51 rock samples were collected. The samples were prepared and analysed by the Acme Analytical Laboratories Ltd. in Dawson City and Vancouver. The assays were made available to the writer in June 2016.

The 2012 soil geochemistry survey and the assays indicate several new gold anomalies on the KS and MB claims. In both cases, the gold anomalies line up in north – south direction and their possible sources are the basement rocks, while fluvio-glacial sediments may have contributed at the lower altitudes. A multi-element anomaly in the northern portion of the KS survey grid is located below a power line, thus it may be of man-made origin.

Detected gold and silver anomalies are recommended for further testing by mechanical trenching to uncover their sources and detailed logging and sampling.

1.1. Location, Access and Topography

The Grouping HD3048 is the largest of the three groupings that make up the LCB. It comprises 722 claim units covering about 14750 ha (Appendix III).

Access to the KS claims from Dawson City is by Klondike HW 2 and by all-weather Hunker Creek road to southern portions of the LCB and then via road branching off HW 2 at the Allgold Creek intersection, some 43 air kilometers from Dawson City. A motorable trail runs southwest along the ridge, from which the access is by ATV, or on foot.

Access to the MB (Minnie Bell) claims from Dawson City is by Klondike HW 2 and by a dirt road that branches off the HW at Allgold Creek and runs south and east.

Topography on the KS claims ranges from rolling to steep with altitudes ranging from 450 meters at the Klondike River to about 800 meters above sea level on top of the Mt. Luba.

Topography on the MB claims is gently rolling with altitudes ranging from 570 meters at Minnie Bell creek to about 700 meters above sea level in the northwestern corner of the grid.

Fig. 1: Location of Leota Claim Block, Grouping HD03048.

1.2. The Claims

The LCB is composed of three groupings numbered HD03048, HD03054 and HD03143. The grouping HD03048 is the largest and comprises 722 claim units. The claim status and information is attached in Appendix III. The HD03048 grouping is surrounded by other Quartz claims named Crown Jewel (owner Shawn Ryan), Zigzag (owner C. Brown), INIT (owner Goldbank Eastern Klondike Properties Inc.), Forgotten (owner C. Brown), HRS, CAU, Almeda (owners S. Montreuil, E. Petroutsas, M. Church), UDQ (owner Abakhan and Associates Inc., GATA, Gotta and Sheba (owner Klondike Star Mineral Corp.), DOM (owner KSL Exploration), Hasenfuss (owner Goldbank Eastern Klondike Properties Inc.), Nikki (owner G. Morris). Leota KS 20, 25 and 26 claims in part overlap with the placer claims named KRT 2 and KRT 5 that are 100 % owned by John Alton.

1.3. Terms of Reference

This report summarizes the results of a soil sampling program that was conducted on selected claims within the Grouping Certificate HD03048 in 2012. The objective was to expand on the 2011 grids to test the possible extensions of the precious and/or base metal anomalies, to map and sample the outcrops and old pits or trenches located within and outside the soil sampling grids and to record structural information. This report has been written after the assays were made available to the writer in 2016.

For parts of this report the writer has relied on the Technical Report by C. H. Ash (2010), on the assessment and open file reports of the Yukon Exploration and Geological Services Division, on various geo-scientific publications and on the Yukon Department of Energy, Mines and Resources (YDEMR) Internet applications. The information reported by other experts who are not qualified persons for this report are quoted in the References chapter and are to the best of the writer's knowledge and experience correct and suitable for inclusion in this report. Claim descriptions provided herein have been excerpted from the electronic applications of the YDEMR and relate to the status as of March 16, 2012. The 2012 Exploration Expenses chapter was prepared by Goldbank Mining Corp.

2. PREVIOUS EXPLORATION

The earliest geological information on the gold placer and lode gold mining in the Klondike area was presented by McConnell (1900, 1907), Tyrrell (1907), MacLean (1914) and others. Of note is Tyrrell's observation that "...the Klondike District owes its phenomenally rich placers not to the wearing down of highly mineralized gold-bearing veins or lodes but rather to the favorable conditions of land, continued and un-interrupted concentrations from a great mass of rock that contained only very minute quantities of gold".

The broader area was mapped and investigated by the Yukon Geological Survey at scale 1:250,000 (Bostock, 1942), and the areas south and east of Dawson City at 1:50,000 scale (Debicki et al, 1984, 1985; Mortensen, 1996).

Geochemical and geophysical surveys (IP, resistivity and magnetics) and percussion drilling were carried out during the 1980s and 1990s on the nearby Sheba – Mitchell, Gold Bottom and other occurrences (Mortensen 1984 a, b, Hulstein, 1988; Tomlinson and Gonzales, 1990, Mark, 1991, Stevens, 1997). Mortensen's (1996) explanations to geological maps include summaries of historical mines and occurrences in the area (Minfile 115 O 067, 068, 069, 086).

Newer geological maps at scale 1:250,000 of the entire Yukon (Gordey and Makepeace, 2003) and of the Stewart River region (Gordey and Ryan, 2005) by the Yukon Geological Survey and geological maps of the Klondike Goldfields at 1:50,000 scale are part of the geo-scientific papers by MacKenzie et al (2007, 2008). Ash produced a geological map of the Klondike Goldfields (map sheets 115O14, 116O15, 116B02 and 116B03) with the suture zone dividing the hanging wall ophiolitic rocks from the footwall metamorphic and plutonic rocks. McFaull presents a Map of Auriferous Gravels, Hunker Creek at scale 1:30,000, in which the Mother Lode-style gold mineralization extends from Dago Hill to Nugget Hill and is overlain by the White Channel bench.

In 2008 and 2009, Pocklington and his co-workers carried out trenching programs on the LCB, focusing on the quartz vein occurrences (Pocklington 2009, 2010). In 2009 – 2010, Cash Geological Consulting conducted geological and geochemical surveys on the Leota property

(Ash, 2010). Eight independent gold anomalous areas were identified and three, named Hasenfuss, Michie, and Cheerio, were described as definitive gold zones that could be made drill ready within two months of further definition exploration. The remaining areas were defined by the point-source, the ridge or spur soil surveys or by grab sampling (Ash, 2010).

3. REGIONAL GEOLOGY

The area is situated on the southwest side of the Tintina Trench within the Yukon – Tanana Terrane. The Klondike Goldfield is made up of meta-sedimentary and meta-igneous units belonging to Klondike Schist and Finlayson Assemblages and lesser amount of low-grade metamorphosed ultramafic rocks of the Slide Mountain Terrane comprised of serpentinite, harzburgite and their altered, carbonatized and steatitized derivatives (MacKenzie et al, 2008).

Regional scale thrust faulting in the Early Jurassic stacked these rocks into a series of thrust slices that are locally separated by lenses of sheared ultramafic rocks. They were then uplifted through the brittle-ductile transition in the Jurassic and unconformably overlain by locally derived sedimentary and volcanogenic rocks in the Late Cretaceous (Mortensen, 1996). The Klondike Goldfield was then offset approximately 450 km along the Tintina fault (Gabrielse et al., 2006). Erosion and minor uplift continued in the Late Tertiary and resulted in the deposition of Pliocene White Channel Gravels and their placer gold deposits (Lowey, 2005).

4. LOCAL GEOLOGY AND MINERAL OCCURRENCES

Based on Mortensen (1996) and Gordey & Makepeace (2003), the Leota KS claims are underlain by Nasina, Anvil and Klondike Schist Assemblages. The Nasina Assemblage is made up of meta-siliciclastic rocks of Late (?) Devonian to Early Mississippian age (DMN1) comprised of medium to coarse grained mica schist, commonly garnetiferous, with amphibolite and minor quartzite and conglomerate. The Anvil Assemblage (CPA4) is made up of Late Paleozoic, mafic/ultramafic rocks of oceanic origin (Fig. 3). The Klondike schist is represented mainly by muscovitic or chloritic quartzite and quartz-muscovite-chlorite schist.

According to Debicki (1985), the KS claims are underlain by various facies of muscovite-quartz-feldspathic schist, garnet-feldspar-chlorite schist and foliated serpentinite, all of Triassic or older age. Debicki (1984, 1985) described two mineral occurrences in the area, the first named Asbestos Bluff about 1 km southwest of the Klondike Highway – Dempster HW junction.

The chrysotile fibres up to 9 mm long occur with amphibole fibres up to 50 mm long in a 10 meter wide zone of brecciated serpentinite. The second, named Leotta, coincides with the Minfile 115O 074 occurrence. It was staked in 1969 after sphalerite was found in a panning sample from Too Much Gold Creek. The area is underlain by carbonaceous quartz-muscovite schist of the Nasina Assemblage that has been tectonically interleaved with thrust slices of serpentinitized harzburgite (Slide Mountain Terrane, Anvil Assemblage).

Minfile 115O 074 describes an occurrence named Leotta where GSC reported sphalerite in a panning sample from Too Much Gold Creek. Minfile 115O 126 describes the All Gold quartz vein, which was reportedly up to 4.3 meters wide and was followed for a length of 300 meters parallel to greenstone dyke. The area is mainly underlain by carbonaceous quartz-muscovite schist of Nasina Assemblage (DMqsc), which has been overthrust by a slice of serpentinitized harzburgite (Pzu). The “greenstone dyke” could be either a narrow, imbricate thrust slice of greenstone associated with the serpentinite unit (Pzg) or a conformable band of chlorite schist and amphibolite within the Nasina Assemblage metasedimentary rocks (DMasc).

5. 2012 GEOCHEMISTRY SURVEY

5.1. Soil Geochemistry

A soil geochemistry program was carried out on the HD03048 Grouping intermittently from August 19 to October 3, 2012, with a rationale to follow up on the 2011 KS and MB grids (Fig. 3) and to continue searching for the gold anomalies. Compliant with the 2011 grids, the lines were spaced 100 meters and the stations 25 meters apart. The soil samples were collected from “C” horizon using a Dutch auger. The samples were placed in pre-numbered Kraft paper bags

and sealed with flagging tape. Each station was flagged and coordinates were recorded using a GPS unit.

In total, 747 soil samples were collected from the KS and MB claims. The writer kept samples in his possession during the survey and personally dispatched samples to Acme Analytical Laboratories Ltd. (AcmeLabs) facility in Dawson City for preparation. The analysis proper was conducted at AcmeLabs in Vancouver.

5.1.1. KS Claims

The 2012 soil survey was carried out on the Leota KS 2 (YC63293), Leota KS 10 (YC63301), Leota KS 12 (YC63303), Leota KS 14 to 19 (YC63305 – YC63310), Leota KS 21 to 22 (YC63312 to YC63313), Leota KS 24 to 27 (YC63315 to YC63318), Leota KS 29 (YC63320), Leota KS 31 (YC63322); Leota KS 33 (YC63324) and Leota KS 35 (YC63326) claims as a follow-up on the 2011 survey. Five lines were added to the east, four lines to the west and thus combined grid was extended 300 meters southwards as shown in Figs. 4 to 7. The 2011 and 2012 grids are underlain by the Klondike Schist, Nasina and Anvil Assemblages (Figs. 3 and 6) and the rationale was to test the precious and/or base metal abundances in each and the presumed alteration zones at their contacts. In this report the 2011 and 2012 grids are joined together to obtain a complex picture.

In total, 649 samples were collected from the KS claims in 2012. It has become apparent during the survey that the north-facing slopes at lower altitudes are locally covered by gravel and rounded cobbles up to 30 cm in diameter. Several old pits were found dug into the gravel deposits. This gravel does not appear to belong to White Channel Gravel unit. Other parts of the north-facing grid are locally waterlogged and/or underlain by permafrost. Fig. 7 shows the stations marked by distinct colors for gravel and permafrost and/or waterlogged areas..

The assays were statistically processed using Excel Toolpak (Tables 1 and 2) and the graphs are presented in Figs. 8 to 11. The isoline maps and a 3D rendering (Figs. 12 to 19) for selected elements were produced using the Surfer12 program of Golden Software.

5.1.2. MB Claims

Soil sampling was carried out in the Minnie Bell creek area from September 4 to 7, 2012 with an objective to test the presumed extensions of gold anomalies detected in 2011. The grid was laid on the claims Leota MB 15 (YC63915), Leota MB 19 (YC63514), Leota MB 21 (YC63921), Leota MB 25 (YC63925) and Leota MB 26 (YC63926), immediately north of the 2011 grid. The writer aided by a junior geologist M. O'Donnell ran two lines and collected 98 soil samples from the "C" horizon using a Dutch auger, as shown in Figs. 20 and 21. The analytical results are shown in graphs in Figs. 22 to 25 and the statistics and correlations are listed in Tables 3 and 4. The isoline maps for precious, base and other metals for 2011 and 2012 grids combined are displayed in Figs. 26 to 33. Additionally, two rock samples were collected from outcrops immediately north of the grid (Fig. 21) and the results are presented below.

5.2. Rock Geochemistry

Fifty one rock samples were collected from the outcrops and/or historical trenches located on the soil grids and on the claims Leota KS63 - 64 (YC63354, YC63355), Leota KS74 (YC63365), Leota KS85 (YC63376), Leota AGC1 (YC63476), Leota AC4 (YC63453), Leota AC12 (YC63461), Leota AC22 (YC63471), Leota AC24 (YC63473), Leota HC24 (YC84024), Leota HC28 (YC84028), Leota SM888 (YC84056), Leota EV13 - 14 (YC63396 - YC63397), Leota EV16 (YC63399), Leota EV25 (YC63548), Leota QV16 (YC63415), BM17-19 (YC63512-YC63513) and Leota LK33 (YC63855). The sample locations with Au, Ag, Cu and Pb values are shown in Figs. 5, 21, 34-37 and the sample coordinates and descriptions are in Appendices II and III. The statistics and correlations are in Tables 5 and 6 and the assay graphs are in Figs. 38 -41.

Fig. 41: graphs for chromium, nickel and magnesium (Y axis at logarithmic scale).

The rock samples are classified with the Klondike Schist, Nasina and/or Anvil Assemblages.

6. SAMPLE PREPARATION AND ANALYSIS

AcmeLabs conducted the sample preparation and analysis in accordance with generally accepted analytical laboratory principles and practices. The soil samples were prepared by drying at 60° C and sieving 100g to -80 mesh (code SS80). The rock samples (1 kg) were crushed, split and pulverized to 200 mesh (code R200-1000) and the analyses performed on 30 g pulps using Aqua Regia digestion and Ultratrace ICP-MS analysis (codes 1F03, 1F06) for 37 and/or 53 elements for soils and rocks, respectively.

The assays for selected elements were statistically evaluated and descriptive statistics and correlations were made using the Excel Toolpak program (Tables 1 to 6). Graphs for selected elements (Figs. 8 – 11, 22 – 25, 38 – 41) were also made using the Excel program. The contouring and 3D surface mapping for selected elements was made using the Surfer 12 program of Golden Software Inc., and the results are illustrated in Figs. 12 to 19, 21, 26 to 33.

7. QUALITY ASSURANCE

The AcmeLabs Quality Assurance (QA) program includes repeat, standard and blank analyses for soil and rock samples. The QA for soil samples from the KS and MB claims consisted of 45 repeats (Figs. 42 to 51), 29 standards (Figs. 52 to 56) and 25 blanks (table below). The QA for rock samples included two standards, two blanks and two prepared blanks. QA for the MB assays in Figs. 42 to 51 are numbered 209 and 225, all other QA is for the KS assays.

Correlation coefficients for original vs repeat assays in soil samples

Au	Ag	As	Cu	Pb	Zn	Sb	Hg	Cr	Ni
0.5494	0.9976	0.9894	0.9980	0.9912	0.9841	0.9850	0.8322	0.9894	0.9978

Note: Au, Ag, Hg in ppb, all other elements in ppm.

As shown in Figs. 42 to 51 b, the correlation coefficients for original vs repeat assays range from 0.5494 to 0.9980. Gold has the lowest coefficient of 0.5494, indicating some discrepancies occur in the assays. Mercury with the coefficient of 0.8322 also fares lower than

other elements, in which the coefficients range above 0.9, indicating a good reproducibility. As for the gold assays, inconsistencies are probably caused by a nugget effect. Similar effects were observed in the assays made on the soil from this area in 2011.

The QA included a DS9 standard that was measured multiple times with samples from the KS and MB claims. The performance is shown in Figs. 52 to 56. Most DS9 standard assays are close to the mean or within ± 1 standard deviation (“SD”) for all elements. Exceptions include one gold value above the +2 SD, two silver values outside the + or – 2 SD, one copper above + 2SD, one lead above +2SD, two zincs above + 2SD, one arsenic above +2 SD, one antimony below -2SD and one mercury above + 2 SD.

Blanks for Co, Fe, U, Au, Th, Sr, Sb, V, Ca, P, La, Mg, Ba, Ti, B, Al, Na, K, W, Sc, Tl, S, Hg, Se and Ga are all below detection limit (“DL”), however, a number of elements fall above detection limits, as shown in Table 8 below:

Table 8: Blanks with assays above DL

Element	Mo	Cu	Pb	Zn	Ag	Ni	Mn	As	Cd	Bi	Cr	Te
Maximum	0.01	0.25	0.03	0.2	8	1.4	1	0.4	0.01	0.03	1.2	0.05
Count	1	9	6	5	10	17	2	9	1	1	12	3

QA for the rock samples shows two DS8 standards for all elements that are equal and/or within 10 % from each other. Prepared blanks for all elements but gold, cadmium, boron, mercury, germanium and indium are within 20 % range, while the remaining elements have one value below and one value above detection limit. Blanks for all elements are below DL.

In conclusion we can state that AcmeLabs adhered to generally accepted industry procedures and practices and achieved a good accuracy and reproducibility of the soil and rock sample assays for all elements but gold, which may have been affected by a nugget effect (Fig. 42). More work is needed to ascertain the real cause. Regardless of this, the assays are acceptable for this stage of the project. During the future stages of the project, the Company should require the laboratory to apply a differential method for sample preparations to improve the accuracy and reproducibility of the gold assays.

8. CONCLUSIONS AND RECOMMENDATIONS

The objectives of the 2012 soil and rock geochemistry surveys on the Leota Grouping HD03048 were to follow up on the 2011 survey and to continue the search for the precious and base metal anomalies in decomposed residues of the Nasina, Anvil and Klondike Schist Assemblages as the indicators of lode-gold mineralization. The survey also addressed the lithology, the veins and the structural features including the main foliation, contacts, faults and thrust zones and their bearing on the gold mineralization.

The grid on the KS claims was extended to the west, east and south and the 2011 and 2012 grids were combined to gain a wider picture of the area. A new gold anomaly (maximum 456.7 ppb Au) was discovered on the line 613800E from 7092575N to 7092825N. It extends for at least 250 meters in the north – south direction and straddles the contact between Klondike Schist and Anvil Assemblages. Some of the repeat assays from this zone returned much higher gold values than their originals indicating a nugget effect. The survey/assays also revealed a silver anomaly (maximum 2754 ppb Ag) extending in the west – east direction from 613000 to 613700E. Its eastern end coincides with the above gold anomaly. Based on the sporadic small outcrops and rock fragments in soil, the anomalous area is underlain by ultramafic rocks and/or their altered derivatives.

No correlation was detected between gold and any other precious and/or base metals. However, faint correlations were detected among silver, zinc and antimony and between lead and arsenic. The coincident, copper – lead – zinc – arsenic - mercury, and in part silver and iron anomalies in the northern portion of the KS grid are located below a transmission line and their origin is questionable, not excluding the man-made.

On the MB claims, two lines were run north of the 2011 grid and the results indicate that the gold anomaly extends in that direction. The anomaly strikes north-northwest and may be sourced from a vein and/or an alteration zone hosted by the Nasina Assemblage. A chlorite – biotite schist outcrop was found on the road just north of the gold anomaly and the soil assays

with anomalous chromium, nickel and magnesium from this area indicate a northwestern extent of these rocks below the soil overburden.

The soil assays from MB claims do not indicate any correlation between gold and silver and/or between the precious and base metals. A weak correlation was detected between lead and arsenic, similar to that in the KS area. The strongest correlations exist among the chromium – nickel – magnesium group metals, and can be used as indicators of the ophiolitic rocks or mafic schist in the bedrock.

The rock assays indicate a strong correlation between gold and antimony (coefficient 0.876, covariance 77%) and fairly strong correlation between gold and arsenic. Arsenic also fairly well correlates with silver and antimony. These correlations indicate a polymetallic, epithermal mineralization.

The gold anomalies detected in 2012 soil survey are recommended for further testing by step-in soil sampling and contingent on the results a mechanical trenching program should be conducted.

9. 2012 EXPLORATION EXPENSES

Geologist (25 days @ \$ 600)	15000.00
Assistant (14 days x 300)	4200.00
Assistant (12 days x 300)	3600.00

11. STATEMENT OF QUALIFICATIONS

I, Bohumil (Boris) Molak, Ph.D., P.Geo., do hereby certify that:

1. I am a self-employed Geoscientist residing at 704 – 6689 Willingdon Avenue, Burnaby, BC., V5H 3Y8, Canada.
2. I am a member of the Association of Professional Engineers and Geoscientists of British Columbia (License No. 28600) in good standing.
3. I graduated from the Comenius University of Czechoslovakia with a Bachelor of Science in Economic Geology in 1970. The same university awarded me the degree Master of Science in Economic Geology (RNDr.) in 1980 and the degree Doctor of Philosophy (CSc.) in Applied Geology and Geophysics in 1990. I have been practicing my profession since 1970.
4. My geological practice includes exploration and research for/into precious, base and other metals in Czechoslovakia, Zambia, Cuba, Guinea, Canada, Chile and Argentina.
5. Since 2003 until present I am a self-employed geo-scientist.
6. I personally supervised the soil survey on the KS, MB and other claims from September 24 to October 26, 2011. I am responsible for all items in this report. The sources of all information not based on personal examination are quoted in the References Chapter.
7. As of the date of this Statement I am not aware of any material fact or material change with respect to the subject matter of this report that is not reflected in this report, the omission of which would make the report misleading.
8. I am independent of Goldbank Mining Corp.

Dated at Vancouver, BC, Canada, this 25th day of July, 2017.

APPENDIX I

Leota KS and MB Claims, Soil Samples and Coordinates

(Grey color: 2011 samples/coordinates)

APPENDIX II

Rock Sample Descriptions and Coordinates, KS, MB and Other Claims, Grouping
HD03048

#	Description	Easting	Northing	Au*	Ag*
26945	Allgold placer operation, outcrop in schist with alluvial sediment in fractures	613648	7089653	36.8	223
26947	Allgold creek, outcrop, gossanous Fe-ox material of red-brown to orange color	612979	7089391	7.1	436
26948	GC/CT claims, Klondike Schist? Small outcrop	603735	7095900	0.9	150
26949	Allgold creek, outcrop, quartz nest wrapped in biotite, some vugs lined up with Fe-ox	614657	7090312	0.2	33
26950	Allgold creek, same outcrop, quartz nest, chlorite, fuchsite?, Fe-ox infiltrations, vugs filled with Fe-ox	614645	7090317	0.9	63
26961	Allgold creek, listwanite composed of quartz and carbonate, vug filled with Fe-oxides and chlorite	614858	7090546	<0.2	74
26962	Allgold creek, carbonate (ankerite?) selected from a nest made up of carbonate minerals and chlorite	614858	7090546	3.0	42
26964	KS claims, small outcrop, serpentinite (?)	613800	7092800	1.0	11
26965	KS claims, small outcrop, serpentinite (?)	613695	7092739	<0.2	18
26969	Allgold claims, biotite-rich rock with some chlorite, garnet(?) and Fe-oxides	612808	7089304	0.2	65
26970	Allgold creek, outcrop, selective sample - quartz lense with vugs filled with Fe-oxides, a black mineral (?)	612808	7089304	1.0	47
26971	Allgold creek, outcrop of biotite gneiss or schist, selective sample of black mineral (non-magnetic)	612819	7089332	<0.2	163
26972	Allgold creek, same outcrop, gneissic rock, some disseminated sulphides, arsenopyrite (?)	612819	7089332	0.4	49
26973	Allgold creek, outcrop of biotite gneiss, quartz lense with yellow Fe-oxidic	611836	7088555	1.0	220
26974	Allgold creek, large pit, quartz vein (~2m thick) altered mica schist & grey siliceous rock + biotite and Fe-oxid	610963	7088427	2.0	235
26974A	Allgold creek, large pit, brown, decomposed "soily" sample rich in Fe-oxidic matter	614600	7092675	46.7	1000
26980	MB claims:subcrop, quartz lense in green schist, empty vugs, green mica flakes (phlogopite?), actinolite	618398	7088773	15.7	82
26981	MB claims:outcrop, green schist (breaks to platelets), quartz lenses, green mica flakes(phlogopite?)	618395	7088774	3.5	26
26984	KS claims, small outcrop, fine gr. dark to black banded siliceous rocks (graphitic?) with empty, +/- Fe-ox vugs	613776	7091845	14.0	1936
26988	KS claims, trench, grab sample, serpentinitized peridotite	613070	7092605	0.3	6.0
26989	KS claims, trench (W end), black (graphit.) schist with quartz lenses/veinlets along foliation, vugs with Fe-oxides	613057	7092605	1.1	1190
26990	KS claims, trench, chip sample, black schist with quartz lenses, veinlets along foliation, vugs with Fe-oxides	612964	7092601	<0.2	799
26991	KS claims, trench, grab sample, contact serpentinite-black mica-qtz schist, greenish gouge, actinolite, talc	612995	7092390	<0.2	101
26992	KS claims, trench, grab sample, altered Kl. schist +/- graphite, hornfelsic bands, mica bands, Fe-oxidic bands	612915	7091611	0.5	1400
26999	KS claims, trench into serpentinite	612764	7092840	3.5	86
27000	KS claims, trench, green schist with biotite (newly formed?), some brown, oxidized pyrite cubes, serpentinite	613002	7092217	1.4	40
27001	Pit beside trail, float, Kl. Schist at contact with vein quartz,	612927	7091617	2.9	110
27002	Bump on ridge running to GC/CT claims, silicif. Kl. schist, +/- chloritic, barren quartz, Fe-oxide streaks, patches	605315	7091610	1.5	487
27003	Bump on ridge running to GC/CT claims, chloritic(?), or sericitic(?) schist, +/- biotite, folded, quartz, oxid. pyrite	605147	7091877	1.8	112
27004	Ridge running to GC/CT claims, white +/- black mica schist, +/- vein quartz, some oxidized diss. pyrite in schist	604461	7092774	0.2	24
1304951	Stripped area, filled-in trench (?), float includes Klondike schist fragments with tiny pyrite cubes	605893	7091064	1.8	1266
1304952	Stripped area, filled-in trench (?), float includes Klondike schist fragments with tiny pyrite cubes	605903	7090996	1.0	378

Geochemical Report on the Leota Claim Block, grouping HD03048, Yukon Territory, Canada

1304953	Stripped area, filled-in trench (?), float includes vein quartz; selective chips of quartz + vugs filled with Fe-oxides	605903	7090996	3.6	225
1304954	Stripped area, filled-in trench (?), float - silicified variety of Kl. schist, sericite, chlorite (?), small dissem. pyrite	605903	7090996	<0.2	83
1304955	Trench on ridge, exposing Klondike schist containing some black magnetite and oxidized cubes of pyrite	605840	7090607	2.6	480
1304956	Allgold-Alexander creek confluence; sheared bi-mica gneiss, some oxidized pyrite inclusions	609350	7087905	0.7	139
1304958	Allgold creek, outcrop, a band rich in biotite, garnet (?) , locally nerly pure biotite, garnet	612821	7089313	<0.2	81
1304959	Allgold creek, outcrop, biotite, garnet (?), Fe-oxidic vug fillings, chloritized garnet (?) with a metallic mineral in it	612821	7089313	<0.2	104
1304960	Michie stripped area, trench, chloritic schist, quartz lenses, listwenite, barite(?), talc(?), brown ox. Fe-carbonate	609656	7088023	0.6	48
1304961	Michie, stripped area, float, chloritic schist with brown patches, lumps after pyrite or Fe-carbonate?	609644	7088016	1.3	75
1304962	Michie, stripped area, float, quartz with vugs and Fe-ox. Specks, patches, black tourmaline veinlet	609644	7088016	0.6	26
1304063	Michie, dump at trench, dark rock (silicified black schist?), quartz veinlets/lenses, qtz. crystals perpendicular to foliat.	609655	7088374	27.1	146
1304964	Michie, large pit, silicified muscovitic black schist, quartz streaks and lenses, rare disseminated sulphides?	609654	7088472	837.4	689
1304965	Michie, pit, quartz vein, dark-black musc. graphit. schist host rock, q.v. strike ~ 5/85E, Fe-oxidic infiltr., lumps	609612	7088525	181.6	480
1304966	Michie, pit, quartz vein hosted by dark, black musc. graphit. schist, q.v. strike ~ 5/85E, Fe-oxidic infiltr., lumps	609612	7088525	226.3	532
1304967	Michie, pit, quartz vein in dark, black musc. graphit. schist, q.v. strike ~ 320/90, Fe-oxidic infiltr., lumps	609577	7088532	109.0	248

Note: Au, Ag in ppb.

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
Dry at 60C	63	Dry at 60C			DAW
SS80	63	Dry at 60C sieve 100g to -80 mesh			DAW
1F03	63	1:1:1 Aqua Regia digestion Ultratrace ICP-MS analysis	30	Completed	VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CLIENT JOB INFORMATION

Project: Leota
Shipment ID:
P.O. Number
Number of Samples: 50

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Goldbank Mining Corp.
#702 - 889 W. Pender St.
Vancouver BC V6C 3B2
CANADA

SS80	50	Dry at 60C sieve 100g to -80 mesh			DAW
1F03	50	1:1:1 Aqua Regia digestion Ultratrace ICP-MS analysis	30	Completed	VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS

DAW12000305.1

CLIENT JOB INFORMATION

Project: Leota
Shipment ID:
P.O. Number
Number of Samples: 113

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Goldbank Mining Corp.
#702 - 889 W. Pender St.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS

WHI12000781.1

CLIENT JOB INFORMATION

Project: Leota
Shipment ID:
P.O. Number
Number of Samples: 7

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
R200-1000	7	Crush, split and pulverize 1kg of sample to 200 mesh			VAN
1F06	7	1:1:1 Aqua Regia digestion Ultratrace ICP-MS analysis	30	Completed	VAN

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT Dispose of Reject After 90 days

ADDITIONAL COMMENTS

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Goldbank Mining Corp.
#702 - 889 W. Pender St.
Vancouver BC V6C 3B2
CANADA

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS

WHI12000833.1

CLIENT JOB INFORMATION

Project: Leota
Shipment ID:
P.O. Number
Number of Samples: 10

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
R200-1000	8	Crush, split and pulverize 1kg of sample to 200 mesh			VAN
1F06	8	1:1:1 Aqua Regia digestion Ultratrace ICP-MS analysis	30	Completed	VAN

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT Dispose of Reject After 90 days

ADDITIONAL COMMENTS

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Goldbank Mining Corp.
#702 - 889 W. Pender St.
Vancouver BC V6C 3B2
CANADA

CC:

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS

WHI12000892.1

CLIENT JOB INFORMATION

Project: Leota
Shipment ID:
P.O. Number
Number of Samples: 1

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
R200-1000	1	Crush, split and pulverize 1kg of sample to 200 mesh			VAN
1F06	1	1:1:1 Aqua Regia digestion Ultratrace ICP-MS analysis	30	Completed	VAN

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT Dispose of Reject After 90 days

ADDITIONAL COMMENTS

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Goldbank Mining Corp.
#702 - 889 W. Pender St.
Vancouver BC V6C 3B2
CANADA

CC:

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS

WHI12000931.1

CLIENT JOB INFORMATION

Project: Leota
Shipment ID:
P.O. Number
Number of Samples: 8

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
R200-1000	8	Crush, split and pulverize 1kg of sample to 200 mesh			VAN
1F06	8	1:1:1 Aqua Regia digestion Ultratrace ICP-MS analysis	30	Completed	VAN

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT Dispose of Reject After 90 days

ADDITIONAL COMMENTS

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Goldbank Mining Corp.
#702 - 889 W. Pender St.
Vancouver BC V6C 3B2
CANADA

CC:

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS

WHI12000994.1

CLIENT JOB INFORMATION

Project: Leota
Shipment ID:
P.O. Number
Number of Samples: 16

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
R200-1000	16	Crush, split and pulverize 1kg of sample to 200 mesh			VAN
1F06	16	1:1:1 Aqua Regia digestion Ultratrace ICP-MS analysis	30	Completed	VAN

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT Dispose of Reject After 90 days

ADDITIONAL COMMENTS

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Goldbank Mining Corp.
#702 - 889 W. Pender St.
Vancouver BC V6C 3B2
CANADA

CC:

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.
