Vancouver, BC, Canada V6C 3L6
December 13, 2012.

Statement of location of diamond drill core created during the 2018 exploration season at the Brewery Creek Project.

The diamond drill core produced at the Brewery Creek project was partly used for a metallurgical study.

Drillholes with the prefix BCM18 were holes drilled by PQ tubes. Some entire uncut intervals of this core were sent to SGS Ontario for metallurgical test-work. Intervals not sent for test-work are stored on-site at the Brewery Creek project.

Drillholes with the prefix BC18 were exploration holes drilled by NQ tubes. Identified mineralized intercepts in the NQ core were split by diamond caw saw. One half of the core was sent for assay to SGS in Whitehorse, the uncut and remaining ½ drill core is stored on-site at the Brewery Creek project.

Yours sincerely
