From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
21.95	22.14	VN	37	40	NUL	1	6cm banded quartz carbonate vein found along the footwall of a 5cm clay gouged fault zone/shear. Quartz vein has bands of white carbonate that form thin wisps. Hosts disseminated pyrite, arsenopyrite, sphalerite (blackjack) and trace galena.			
								Py	8	DI
								Sp	2	DI
								Gn	0.2	DI
								As	4	DI
26.83	27.45	FT	42	50	NUL	4	weakly phyllic altered granodiorite with clay gouged and faulted fractures cutting throughout. Four faulted structures cut unit at sporadic attitudes, but overall at 50TCA. Structures are defined by bleached white/brown clay and pebbly rubble.			
29.32	29.45	FT	42	65	NUL	1	Clay fault zone found at the contact between overlying , medium green, weakly phyllic altered granodiorite (hanging wall) and maroon quartz feldspar porphyry dyke. Quartz eye fragments found in the clay gouge, along with smeared dark grey sulphide clay patches.			
								Py	1	DI
33.05	33.11	FT	42	60	NUL	1	Clay fault zone found at the contact between overlying red/maroon quartz feldspar porphyry dyke and bleached argillic altered granodiorite. QFP is bleached to grey along contact.			
35.78	35.80	DY	37	60	NUL	1	medium to dark pink, fine grained aplite dyke.			
42.10	42.20	VN	37	62	NUL	1	milky quartz and carbonate vein cutting weakly propylitic altered granodiorite. Vein is slightly brecciated, with quartz fragments. Vein area is strongly oxidized from deep fracture network (?).			
43.30	43.45	FT	42	80	NUL	1	clay gouged fault zone within granodiorite. Footwall zone is blue/grey and strongly clay altered, while footwall rocks are intensely fractured and broken.			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
50.20	50.23	VN	37	55	NUL	1	2cm quartz carbonate breccia vein cutting weakly phyllic altered granodiorite. Minor carbonate is present as bands along the selvedge of the vein. Quartz clasts are present within quartz and smokey quartz vein (quartz brecciating quartz indicates multi-phase). Breccia vein hosts disseminated pyrite throughout.			
								Py	6	DI
52.42	52.48	VN	37	50	NUL	1	Net textured veinlet swarm consisting of white carbonate, ankerite and possibly rhodochrosite(?) (very faint pink colouration).			
								Rh	5	BN
								Ak	5	BN
54.23	54.27	VT	37	60	NUL	1	green chalcedony vein with minor carbonate along selvedges. Disseminated pyrite is found along selvedges near carbonate stringers. Found within an area of granodiorite that has strong oxidation along fracture planes.			
								Py	2	DI
59.18	59.25	VN	37	-	NUL	1	Intensely gouged and oxidized vein zone consisting of bleached white and vibrant orange limonitic clay. Fragments of massive pyrite present within. Zone is rubbly and decomposed, so measurements on orientation are not possible.			
								Py	13	MA
60.90	90.64	ST		-	NUL	1	network of fine carbonate stringers that are oxidized along stringer and fracture planes.			
64.10	64.12	VT	37	25	NUL	1	White to tan carbonate/ankerite veinlet cutting weakly propylitic altered granodiorite.			
66.40	66.42	VT	37	15	NUL	1	Intensely fractured and rubbled zoe of phyllic altered granodiorite. Alteration grades distally to argillic alteration. 1.5cm quartz veinlet cuts GRD, hosting disseminated blebs of pyrite, sphalerite and galena.			
								Gn	1	BL
								Py	5	DI
								Sp	2	BL

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
70.46	70.50	GO	34	60	NUL	1	Black smeared sulphide gouge found along the contact between rubbly and strongly decomposed fault zone (above) and phyllic altered granodiorite that grades into unaltered GRD. Black gouge carries disseminated and coarse euhedral pyrite (fractured and broken). Slickenlines present along gouge.			
								Py	4	DI
75.19	75.36	VN	37	85	NUL	2	Bleached white and green fault gouge zone consisting of fragmented and rounded granodiorite pebbles and clay sitting atop (HW) a quartz-black smokey quartz breccia vein (7cm). Smokey quartz brecciates white quartz, and carries disseminated pyrite throughout the entire vein zone.			
								Py	7	DI
78.44	78.46	VT	37	15	NUL	1	Loww angle carbonate veinlet cutting propylitic altered granodiorite. Vein is offset by fractures (cm scale).			
88.40	84.00	VN	37	-	NUL	4	Intensely rubbly and fractured zone of phyllic altered granodiorite. Rubble zone carries fragments of quartz carbonate veining that hosts disseminated to blebby pyrite.			
								Py	3	DI
								Py	1	BL
101.26	101.29	VN	37	50	NUL	1	2 cm quartz carbonate vein hosted within propylitic and phyllic altered granodiorite. Quartz and carbonate are inter-banded throughout vein. Hosts disseminated pyrite, arsenopyrite and sphalerite with trace galean.			
								Sp	2	DI
								Py	4	DI
								Gn	0.1	DI
								As	2	DI
102.88	102.94	VN	37	50	NUL	1	banded quartz carbonate vein cutting phyllic altered granodiorite along the footwall of rubbly and clay gouged shear/fault zone (cm scale). Vein hosts blebby pyrite, galena, black to red sphalerite and minor dissemianted arsenopyrite. Carbonate veining eminates from the vein along fracture plans (fractures are earlier than veining), and a disseminated pyrite halo is present around vein.			
								Sp	3	BL

								Gn	2	BL
								Py	9	BL
								As	1	DI
103.50	103.86	VN	37	40	NUL	1	Faulted vein zone within rubbly and decomposed propylitic altered granodiorite. Fault vein zone is comprised of a single main quartz carbonate vein (6cm) wwith blebby sphalerite, galena, pyrite, surrounded by strongly faulted granodiorite that carries blebby sulphides and carbonate fragments throughout. Fault selvedges are bleached clay gouge.			
								Py	3	BL
								Sp	2	BL
								Gn	1	DI
104.19	104.63	FT	42	30	NUL	1	Fractured and gougey zone of phyllic altered granodiorite hosting a gouged and rubbly, smokey and white quartz carbonate vein to vein breccia (7cm). Minor disseminated pyrite and sphalerite is present within.			
								Sp	1	DI
								Py	3	DI
105.72	105.82	VN	37	-	NUL	1	Faulted quartz vein icutting pale green altered granodiorite that is partially faulted and rubbly. Vein zone is intensely fractured, but fragments hosts abundant disseminated and blebby pyrite.			
108.27	108.61	FT	42	-	NUL	1	Intensely decomposed and friable phyllic altered granodiorite that makes up a mineralized fault zone. Strongly gouged granodiorite hosts disseminated pyrite, black sulphide smear and smokey grey streaks throughout. Zone is found on the footwall of a quartz carbonate breccia zone.			
								Py	3	DI
108.61	108.76	VB	37	70	NUL	1	Quartz carbonate (dominantly white carbonate) and minor ankerite breccia zone fount along the footwall of mineralized fault zone. Quartz and carbonate is intermixed in breccia matrix, but quartz clasts are dominant breccia clasts. Blebs of galena, sphalerite and pyrite are found within. Sulphide stringers eminate from the footwall of the vein breccia zone.			
								Gn	3	BL

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
								Py	2	BL
								Sp	1	BL
110.94	110.96	VN	37	60	NUL	1	quartz carbonate vein (barren) found along hematite/chlorite slickenside joint plane.			
116.05	116.20	VB	37	57	NUL	1	Massive quartz carbonate breccia vein within phyllic altered granodiorite. Quartz breccia vein has ankerite throughout, which brecciates quartz (enveloped quartz fragments and clasts within ankerite). Breccia zone hosts massive blackjack to red sphalerite, and blebby to disseminated galena throughout. Minor pyrite is also present.			
								Py	1	DI
								Gn	4	BL
								Sp	10	MA
117.22	117.39	VB	37	50	NUL	1	Quartz-smokey quartz-carbonate vein breccia zone found within rubbly and gouged phyllic altered granodiorite. Vein hosts disseminated pyrite, arsenopyrite and trace galena throughout. Vein breccia is truncated and offset (cm scale) by fractures and shear zones within the soft decomposing granodiorite interval.			
								Py	5	DI
								As	1	DI
134.00	134.17	VN	37	25	NUL	1	Highly fractured vein zone with poor recovery. Massive sulphide vein cutting strongly phyllic altered granodiorite in above hanging wall and strongly argillic/propylitic altered granodiorite below (footwall). Massive sulphide vein has HW contact of 25-30 TCA, but lower contact is destroyed. Vein hosts massive galena that forms a solid and defined centre-line vein which is zoned by massive banded arsenopyrite, pyrite and blackjack sphalerite.			
								Gn	20	MA
								Sp	4	BL
								As	15	MA
								Py	15	MA

								Py	7	BL
174.33	174.50	VB	37	-	NUL	1	Fractured and rubbly quartz-smokey quartz-carbonate vein breccia zone within phyllic altered granodiorite. Hosts clasts of carbonate and milky quartz. Hosts disseminated pyrite throughout.			
								Py	4	DI
181.80	181.92	VN	37	80	NUL	1	10 cm quartz vein cutting grey to green phyllic altered granodiorite zone. Vein hosts massive pyrite, arsenopyrite and trace galena.			
								As	15	MA
								Py	18	MA
								Gn	1	DI
182.25	182.69	VN	37	70	NUL	3	Three narrow polymetallic, massive sulphide veins cutting phyllic altered granodiorite. Veins are quartz-carbonate veins that cut phyllic altered granodiorite. The first vein is comprises a centre-line of massive galena with disseminated pyrite along selvedges (2-3cm), followed by a smokey quartz vein found along shear/fault gouge that hosts dissemianted pyrite, sphalerite and arsenopyrte (6cm), and finally a smokey quartz carbonate vein hosting ganela, pyrite, arsenopyrite and red to honey brown sphalerite. (2cm)			
								Py	10	BL
								Sp	5	BL
								As	3	BL
								Gn	4	BL
183.43	183.46	VT	37	75	NUL	1	narrow quartz vein hosting massive pyrite.			
								Py	30	BL
192.24	192.26	VT	37	60	NUL	1	quartz carbonate veinlet cutting propylitic altered granodiorite.			
203.06	203.06	VT	37	60	NUL	1	banded quartz carbonate vein hosting disseminated pyrite. Slickenlines present along hanging wall fracture face.			
								Py	4	DI
214.11	214.40	FT	42	70	NUL	1	Gouged and decomposed fault zone that shears and grinds up a vein. Fault gouge hosts grey sulphide smear, and black smokey quartz carbonate breccia vein fragments. Hosts disseminated pyrite.			
								Py	6	DI

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
219.69	219.95	VT	37	68	NUL	3	caronate veinlets cutting propylitic/argillic altered granodiorite. Found in association with dark pink aplite dykes. Carbonate veinlets crosscut and offset aplite dykes indicating dykes are earlier stage.			
220.80	220.91	DY	37	85	NUL	1	deep red to pink, very fine aplite dyke that is cut by carbonate veinlets. Found in unaltered granodiorite.			
226.67	227.00	VB	37	60	NUL	1	quartz-smokey quartz-carbonate breccia vein zonen that cuts stronglgy argillic altered granodiorite. Breccia vein has black sulphide smears throughout that form net textured bands. Sulphides comprised of dominantly dissemianted pyrite.			
								Py	7	DI
234.74	235.18	VB	37	73	NUL	1	Smokey quartz-carbonate breccia zone cutting phyllic altered granodiorite. Breccia zone is comprised of a larger 15cm breccia vein and smaller narrow carbonate breccia veinlets along the selvedges, eminating outwards. Carbonate and quartz veins are banded, with carbonate banding within the quartz. Smokey quartz comes in as later stage viening and brecciates regular milky quartz. Ankerite present. Breccia veins host disseminated pyrite and bands of galena, red to honey brown sphalerite and minor disseminated arsenopyrite.			
								As	1	DI
								Py	6	DI
								Gn	3	BN
								Sp	3	BN
241.23	243.00	VN	37	70	NUL	3	Three carbonate veins with minor quartz, averaging 3cm in width cutting unaltered to weakly propylitic altered granodiorite. No distinct sulphides outside of disseminated pyrite present within.			
								Py	3	DI
248.79	248.82	VN	37	50	NUL	1	3 cm, calcite vein brecciating host grd			
254.61	254.65	VN	37	35	NUL	1	1 cm, pyrite bearing , calcite infilled and brecciated quartz vein in weakly propylitic granodiorite

37.15	38.55	1.40	GRD	GRDF	MG	faulted, fractured, heavily oxidized and clay altered, weakly propylitic altered granodiorite; likely related to faulting.
38.55	38.85	0.30	FLT	GRDF	FG	gouged, faulted contact between granodiorite and siliceous QFP dyke
38.85	45.75	6.90	QFP	DYK	MG	light grey to reeeish grey, densely fractured (all fractures in interval trend ~70 TCA, competent feldspar porphyry dyke with pervaiseve reddish alteration - this is likely related to the density of fractures and surface leaching.
45.75	46.05	0.30	GRD	GRDF	MG	fault gouged contact between QFP dyke (above) and grd (below) trends 80 TCA
46.05	47.80	1.75	GRD	GRDA	MG	moderately argillic altered granodiorite with weak propylitic overprint.
47.80	49.00	1.20	GRD	GRDM	MG	moderate to strong propylitic altered granodiorite with set of seven quartz veinlets up to 7 mm with trace pyrite along their margins.
49.00	49.29	0.29	GRD	GRDF	MG	phyllic and propylitic, clay altered brecciated granodiorite; likely faulted
49.29	49.75	0.46	QFP	DYK	MG	medium brownish grey feldspar porphyry dyke, trending 70 TCA with a sharp upper and lower contact
49.75	51.20	1.45	GRD	GRDA	MG	heavily argillic and prpylitic altered granodiorite with weak hairline veinlets (3) throughout interval, without sulfides.
51.20	53.20	2.00	QFP	DYK	MG	medium grey to brownish grey with greenish white feldspar clasts, feldspar porphyritic dyke.
53.20	53.90	0.70	GRD	GRDF	MG	medium grey, brecciated and clay altered granodiorite.
53.90	55.46	1.56	QFP	DYK	MG	medium grained brownish grey weakly clay altered feldspar porphyritic dyke
55.46	57.20	1.74	GRD	GRDM	MG	moderately propyltiic altered and weakly silcified granodiorite with trace disseminated pyrite throughout interval
57.20	58.45	1.25	QFP	DYK	MG	medium grey with white feldspar grains and a dense stockwork of mesh like fine-grained black veinlets, porphyritic dyke. Contact trends 45 TCA
58.45	61.00	2.55	GRD	GRDA	MG	medium grey to light grey moderately argillic altered granodiorite
61.00	61.75	0.75	QFP	DYK	MG	porphyritic medium to dark grey feldspar porphyry dyke with a chaotic stockwork of mm-scale quartz veinlets devoid of sulfide
61.75	65.53	3.78	QFP	DYK	MG	light grey feldsdpar porphyritic dyke without any sulfide
65.53	65.75	0.22	QFP	FLT	MG	gouged section of dyke; light grey; intensely clay altered trending 80 TCA on both contacts
65.75	71.30	5.55	QFP	DYK	MG	light grey feldspar porphyryitic dyke

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
71.30	74.50	3.20	GRD	GRDA	MG	medium grained, weakly propylitic altered granodiorite after weak argillic alteration, with sparse quartz veinlets with tace pyrite developed throughout, trending ~40-60 TCA
74.50	74.86	0.36	GRD	GRDF	MG	faulted, gouged, highly fractured granodiorite
74.86	78.15	3.29	GRD	GRDA	MG	weakly propylitic altered granodiorite with weak argillic alteration. Medium greenish grey to grey with rare, hairline, pyrite bearing quartz stringers
78.15	79.50	1.35	GRD	GRDM	MG	light grey to medium grey weakly argillic altered granodiorite with weak propylitic overprint, and a set of 8 hairline quartz carbonate stringers with trace pyrite along margins
79.50	81.26	1.76	GRD	GRDA	MG	medium grained, medium grey weakly propylitic and argillic altered granodiorite
81.26	84.15	2.89	QFP	DYK	MG	feldspar porphyritic, medium brownish grey, with weakly clay altered feldspar grains dyke with a sharp upper and lower contact that trends 60 TCA
84.15	86.25	2.10	GRD	GRDA	MG	weak to moderate propylitic altered granodiorite
86.25	86.46	0.21	VEN	VEIN	MG	weaakly developed, weak pinkish white, rhodochrosite vein mixed with clay altered granodiorite. Upper 10 cm of vein is competent band of rhodoschrosite. Lower 10 cm of vein is brecciated, and is a mixture of rhodochrosite and granodiorite. Weak patchy pyrite and sphalerite is devleoped within vein as well as rimming rhodochrosite clasts in brecciated portion of vein
86.46	88.50	2.04	GRD	GRDM	MG	weakly propylitic and argillic altered granodiorite with weak discrete 5-10 cm sections that are stockwork hairline veined and weakly brecciated. Sparse pyrite bearing veinlets are dispersed throughout interval
88.50	93.90	5.40	GRD	GRDA	MG	weakly argillic altered granodiorite with patchy disseminated tourmaline throughout interval
93.90	96.60	2.70	GRD	GRDM	MG	strongly propylitic and moderately argillic altered granodiorite with sets of quartz stringer veinlets trending 40 TCA (3 in interval) that contain pyrite
96.60	97.75	1.15	GRD	GRDM	MG	weakly brecciated and clay gouged, likely faulted, heavily clay altered granodiorite with disseminated pyrite within groundmass, with three patchy bands of more intense mineralization, with a higher proportion of pyrite
97.75	98.17	0.42	VEN	VEIN	MG	semimassive sulfide vein, with intense phyllic alteration and semimassive cubic pryite hosted within clay altered material. Weak quartz +- rhodoschrosite veining on upper 15 cm of vein, with in situ sulfides (not hosted in clay). Cubic pyrite up to 3 cm by 3 cm and semimassive sphalerite +- galena. Trace arsenopyrite spotted disseminated throughout interval
98.17	100.00	1.83	GRD	GRDM	MG	clay altered, weakly phyllic altered and propylitic altered granodiorite with strong disseminated pyrite throughout, and 4 quartz veinlets trending 40 TCA with pyrite
100.00	100.34	0.34	VEN	VEIN	MG	intensely phyllic altered, veined material with semimassive to massive cubic pyrite hosted within phyllic altered intervals of vein. Weak fine-grained disseminated sphalerite and galena are visible in vein as well.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
100.34	100.90	0.56	GRD	GRDM	MG	clay altered, weakly phyllic altered and propylitic altered granodiorite with strong disseminated pyrite throughout, and 2 quartz veinlets trending 40 TCA with pyrite
100.90	105.00	4.10	GRD	GRDA	MG	weak to moderate propylitic alterd granodiorite with weak argillic alteration. Rare pyrite bearing quartz stringers trending 50 TCA
105.00	105.60	0.60	GRD	GRDM	MG	moderate propylitic altered granodiorite with 4 pyrite bearing quartz veinlets trending 80 TCA
105.60	108.90	3.30	GRD	GRDA	MG	medium grained, medium greenish grey, weakly propylitic and argillic altered granodiorite with rare quartz carbonate veinlets with trace pyrite
108.90	109.50	0.60	GRD	GRDM	MG	strongly argillic altered granodiorite with weak quartz veinlets (two) with pyrite along margins
109.50	112.05	2.55	GRD	GRDA	MG	moderate to strong argillic altered granodiorite

COMMENTS

Reduced to NTW at 36.58m. Elevation pending RTK survey. Notable introduction of chalcedony veining at depth (starting around 230m). Rhodochrosite in hole is incredibly vibrant pink. 36m of HTW rods stuck at top of hole, abandoned due to broken rod string.

333.52	334.00	0.48	FLT	MG	light grey, faulted ,rubbly, argillic granodiorite interval. Trace , pyrite is locally hosted within dark grey, gouged seams in grd interval. (faulted contact between quartz feldspar porphyry dyke and grd).							
334.00	334.49	0.49	GRD	MG	faulted contact footwall comprised of strongly argillic, trace potassic/propylitic granodiorite. Feldspathic clasts near vein zone are light brown/orange altered (oxidation(?)). Trace 1-3mm, dark grey, veinlets (80 degrees TCA) are locally observed on interval							
334.49	334.79	0.30	VEN	MG	strongly argillic, trace propylitic granodiorite vein zone. Interval contains 2mm-1 cm, rhodocrosite infilled, quartz veins which locally host pyrite in dark grey , fine grained bands. Light pink, rhococrosit appears to locally brecciate host quartz vein. Sub-mm , sphalerite crystals are observed within rhodocrosite rich zones. Veins are 80 degrees TCA.							
334.79	338.33	3.54	GRD	MG	strongly argillic moderate potassic granodiorite with local zones of trace propylitic alteration (mostly as alteration halo near veinlets). Trace 1-5mm, quartz-carbonate veinlets are locally observed throughout interval , sometimes hosting trace, disseminated pyrite (veins are 80 degrees TCA).							
338.33	340.11	1.78	GRD	MG	moderate argillic interval with local zones of moderate potassic alteration. 5-8mm, quartz-carbonate veinlets (30 degrees TCA) are hosted in weakly propylitic granodiorite zones.

3.04	6.63	3.59	GRD	GRD	MG	relatively unaltered (trace potassic, trace propylitic granodiorite) with local, light brown oxidation zones. A gouge clayey section is observed from 4.60-4.85m.
6.63	7.09	0.46	GRD	GRDA	MG	moderately arfillic, trace potassic, granodiorite interval with light brown, clay alteration and dark hematite oxidation observed along fracture surfaces.
7.09	8.38	1.29	BXA	GRDA	MG	weakly propylitic, clay altereted, pervasively oxidized granodiorite containing a polymictic , breccia zone from 7.33-8.05m. Alteration halos near brecciated zone are weakly propylitic with breccia footwall being pervasively oxidized. Breccia zone is weakly silicified and disseminated pyrite is locally observed within it.
8.38	11.00	2.62	GRD	GRDA	MG	trace potassic, trace propylitic granodiorite with locally fractured, gouged, clay altered zones (limonite observed within fractured zone).
11.00	12.56	1.56	GRD	GRDA	MG	pervasively oxidized, clay rich, weakly argillic granodiorite interval . Limonite observed in argillic , fractured zones. Dark red hematite oxidation is observed along fracture/joint surfaces.
12.56	16.04	3.48	GRD	GRDA	MG	weakly propylitic granodiorite with with local zones of pervasive oxidation , limonite, and clay alteration. Dark brown, gouged clayey section is observed from 12.60-12.87m. Trace 3mm-1 cm, carbonate infilled, quartz veins are locally observed throughout interval, sometimes containting trace, disseinated pyrite. Largest vein at 14m, exhibits dark brown, carbonate, dentritic inclusions within quartz vein. Sub-mm, pyrite bearing, oxidized veinlets are observed from 13.80-14m. Veins are ~ 50 degrees TCA and are locally offset by calcite infilled fractured. A light pink, fine grained, aplite dyke intrusion(~ 20 degrees TCA) is observed @ 15.60m.
16.04	19.81	3.77	GRD	GRDA	MG	weakly argillic, trace potassic, pervasively oxidized, limonite infilled, granodiorite interval . Darh red hematite oxidation is observed along fractures/joint surfaces and within host grd. Trace 1-4 m, oxidized, carbonate infilled quartz veins are locally observed. Vein @ 17.27m, contains trace galena and sphalerite blebs. Light pink, fine grained aplite dyke intrusion occurs from 18-18.50m.
19.81	22.86	3.05	GRD	GRDA	MG	weakly argillic, trace potassic granodiorite with local zones of pervasive oxidation, clay rich zonesand limonite rich zones. 2 cm, aplite dyke intrusion is present at 21.96m (~45 degrees TCA).
22.86	25.40	2.54	GRD	GRDA	MG	trace potassic, trace propylitic granodiorite intervalwith minor oxidation along fracture surfaces, and within 1-4mm, veins. Some veins are vuggy and are partially infilled by carbonates.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
25.40	28.16	2.76	GRD	GRDA	MG	weakly argillic granodiorite with intermittent zones of weak potassic and weak propylitic alteration. Pervasive oxidation is locally observed throughout interval. 1mm-1 cm, oxidized, cabonate infilled, sometimes vuggy, veins are locally observed as well. Oxidized veins appear to locally brecciate host grd and contain trace disseminated pyrite. Veins are perpendiculary crosscut by sub-mm, hematite infilled fractures. Veins on interval are ~ 35 degrees TCA.
28.16	30.10	1.94	GRD	GRDA	MG	trace potassic, trae propylitic granodiorite with intermitten zones of clay rich, weakly argillic altered grd. Dark grey, fine grained, polymictic intrusions containting oxidized alteration halos near 1-3 mm, carbonate infilled, veinlets.
30.10	31.14	1.04	GRD	GRDA	MG	pervasively limonite and oxidized, moderately argillic granodiorite interval containing gouge, brecciated ones. Reddish hematite oxidation is locally observed along fractures/joint surfaces. Proximal to gouge brecciated section, interval appears weakly sheared.
31.14	35.78	4.64	GRD	GRDA	MG	trace potassic, trace propylitic, relatively unaltered granodiorite with intermittent, oxidized, weakly to moderately argillic sections. Trace 1-2m, oxidized, carbonate infilled veinlets are locally observed throughout interval.
35.78	36.65	0.87	GRD	GRDA	MG	weakly argillic, trae propylitic, unoxidized , granodiorite interval.
36.65	40.16	3.51	GRD	GRDA	MG	light brown/dark brown, oxidized, weakly argillic granodiorite interval containin 1-2 mm, oxidized, carbonate infilled stringer veinlets. Veins are ~ 25 degrees TCA.
40.16	41.84	1.68	GRD	GRDA	MG	trace potassic, trace propylitic, relatively unaltered granodiorite interval.yellowish, dark red oxidation is observed in fracture/joint surfaces.
41.84	42.67	0.83	GRD	GRDA	MG	weakly potassic, trace argillic granodiorite interval with light brown oxidation,limonite rich sections. 1-3m, quartz veins (~ 35 degrees TCA) containing trace blebby galena, pyrite and sphalerite occur throughout interval. A 1 cm, quartz vein containing trace pyrite is observed 42.48m
42.67	43.46	0.79	GRD	GRDA	MG	weakly potassic, propylitic granodiorite containing 5mm-1 cm polymetallic veins. Polymetallic veins contain disseminated pyrite, trace galena, sphalerite, arsenopyrite and are partially infilled by carbonates. Veins locally brecciate host grd. Veins are ~ 35 degrees TCA.
43.46	47.89	4.43	GRD	GRDA	MG	trace potassic,trace propylitic, relatively unaltered granodiorite containing light brown and dark red hematite oxidation on fractures and joint surfaces.
47.89	48.77	0.88	GRD	GRDA	MG	weakly oxidized, weakly argillic, trace potassic granodiorite interval. dark red, hematite oxidation is observed on fractures/joint surfaces.
48.77	49.19	0.42	VEN	GRDA	MG	moderately silicified, locally oxidized, polymetallic vein breccia zone. Light tan, feldspathic clasts and dark grey clasts are observed in vein breccia zone. Trace, disseminated pyrite, sphalerite and galena are hosted in vein breccia zone. Trace, interstitial ankerite occurs within vein zone and light grey, smoky quartz appears to interstitially infill vein breccia zone.
49.19	51.82	2.63	GRD	GRDA	MG	pervasively oxidized, weakly argillic, trace propylitic and local potassix granodiorite zones containting trace 1mm-1 cm, oxidized, carbonate infilled quartz veins containting trace disseminated pyrite.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
51.82	54.31	2.49	GRD	GRDA	MG	trace potassic, trace propylitic, relatively unaltered granodiorite interval. light brown, clay oxidation and dark red hematite oxidation are observed.
54.31	56.58	2.27	GRD	GRDA	MG	weak propylitic, trace potassic altered granodiorite overprinted by weak argillic alteration. Trace, 1 mm, dark fine grained veinlets containing fine grained pyrite and 2-3mm, carbonate infilled quartz veinlets arelocally observed on interval. light brown oxidation occurs in more argillic altered sections.
56.58	64.77	8.19	GRD	GRDA	MG	trace potassic, propylitic, relatively unaltered granodiorite with intermitten zones of weak argillic, potassic alteration. Light brown oxidation and limonite is observed in argillic altered zones. Trace, 1mm, pyrite bearing bands are locally observed on interval
64.77	67.45	2.68	GRD	GRDA	MG	weak propyitic alteration oveprinting weak argillic trace potassic alteration in grd. Trace 1-2 mm, pyrite bearing veins are locally observed on interval. Weak, light brown oxidation occurs in some grd zones.
67.45	76.40	8.95	GRD	GRDA	MG	trace potassic, trace propyliltic granodiorite interval with intermitten zones of weak argillic, trace propylitic alteration. 1 cm, light pink, aplite dyke intrusion is observed at 7515m (~40 degrees tca). Oxidation along fractures and joint surfaces is locally observed.
76.40	77.60	1.20	GRD	GRDA	MG	weakly argillic grnodiorite with intermitten zon of weak propylitic alteration. Light pink, fine grained aplite dyke intrusions are locally observed on interval(~80 degrees TCA). A 2 mm, calcite veinlets crosscuts through aplite dyke intrusion at 76.90m
77.60	80.37	2.77	GRD	GRDA	MG	trace potassic, trae propylitic granodiorit interval displaying light brown and reddish oxidation along fracture and joint surfaces.
80.37	82.15	1.78	GRD	VEIN	MG	weakly propylitic granodiorite overprinting weak argillic alteration. Sheared, gouged brecciated zones are locally observed proximal to vein breccia zone. Ankerite infilled, quartz veins locally brecciate host granodiorite. Fractures locally offset quartz veins in interal. Trace disseminated pyrite occurs in dark grey, gouged seans, within granodiorite host and vein breccia zone. Vein breccia zone is weakly silicified, dark grey and contains feldspathic and quartz clasts. Chlorite clasts, trace pyrite and sphalerite also occuring in vein breccia zone.
82.15	86.68	4.53	GRD	GRDA	MG	moderate potassic, weakly argillic granodiorite interval with zones of dark red, hematite oxidation (oxidation observed in grd, fractures/joint and in quartz veins. Quartz veins contain trace pyrite , and contain dark red hematite inclusions . Veins are locally offset and crosscut by calcite infilled fractures. Trace 1-2 mm, pyrite bearing veinlets are present on interval as well.
86.68	96.15	9.47	GRD	GRD	MG	white/black, salt/pepper unaltered granodiorite interval with intermittent zones (no larger than 10cm) of weak potassic alteration. Trace 1mm, pyritebearing bands occur sporadically throughout interval.
96.15	98.35	2.20	GRD	GRDA	MG	trace potassic, relatively unatered granodiorite interval. trace 1-2mm, carbonate infilled, quartz veinlets are locally observed

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
98.35	99.64	1.29	GRD	GRDA	MG	trace potassic,trace propylitic altered granodiorite oveprinted by weak argillic alteration. 2-4mm, quartz veins sometimes containting trace disseminated pyrite occur on interval. calcite veinlets locally crosscut quartz veins. Interval exhibits increased veining compared to previous unaltered interval.
99.64	101.20	1.56	GRD	GRDA	MG	trace potassic, propylitic granodiorite interval containting 4mm-6mm, carbonate infilled quartz veins. Veins appear to locally brecciate host grd.
101.20	104.50	3.30	GRD	GRDA	MG	trace potassic granodiorite interval displaying yellowish, light brown oxidation along fractures/joint surfaces.
104.50	110.15	5.65	GRD	GRD	MG	black/white, unaltered granodiorite interval. 1-2cm, weakly propylitic alteration sections are observed.
110.15	112.00	1.85	GRD	GRD	MG	black/white, unaltered granodiorite with small, interittent sections of moderate propylitic alteration (as alteration halos near veins). Veins in propylitic alteration halos contain calcite, dark, fine grained, magnetite and trace disseminated pyrite. Veins range from 2-4mm and are ~ 60 degrees TCA. Trace, sub mm, sphalerite is also present in veins.
112.00	116.80	4.80	GRD	GRD	MG	black/white , unaltered granodiorite with trace potassic ,intermittent ones (as alteration halos near veins). Veins are 1-2mm, contain disseminated pyrite. Calcite infilling fracture surfaces in grd is locally observed. Red , hematite oxidation is present along joint surfaces. Propylitic alteration halos are no longer observed on interval.
116.80	121.41	4.61	GRD	GRD	MG	black/white, unaltered granodiorite with intermittent zones of trace propylitic, potassic alteration. Sub-mm, veinlets occur sporadically on interval (with small, potassic alteration halos). Calcite infilling fracture surfaces is locally observed. Dark red, hematite oxidation along joints is also observed on interval.
121.41	126.10	4.69	GRD	GRDA	MG	trace potassic, propylitic granodiorite interval with intermittent potassic altered, propylitic, weakly argillic sections (also as alteration halos near vein zones). Chaotic, sub-mm,calcite infilled fracturing is localy observed throughout granodiorite unit. Vein zone with propylitic alteration halo within a weakly argillic,potassic altered grd section is observed at 122.40m. Pyrite is hosted in smoky quartz veins which are partially infilled by calcite. Pyrite bearing veins in this section are ~ 50 degrees TCA. Least altered grd sections appear to be weakly silicified.
126.10	128.60	2.50	GRD	GRDA	MG	weakly potassic, propylitic altered granodiorite overprinted by argillic alteration. (more argillic and propylitic in vein zone). 4mm-3cm, (60 degrees TCA) smokey quartz veins , partially infilled by calcite and dark red, fine grained , hematite (?) are observed from 127-128m (in propylitic/argillic and potassic/argillic altered grd sections). Trace disseminated pyrite occurs within quartz veins. 1 mm, calcite infilled fractures locally crosscut through quartz veins.
128.60	133.60	5.00	GRD	GRDA	MG	trace to weakly potassic altered granodiorite overprinting trace propylitic alteration. Local fractured sections are pnserved on interval. trace 2mm-1cm, carbonated infilled, quartz veins containing trace disseminated pyirte are locally observed.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
133.60	136.75	3.15	GRD	GRDA	MG	trace propylitic alteration overprinted by trace to weak potassic granodiorite interval containting 4cm-14cm, light pink aplite dyke intrusions (~60 degrees TCA). Trace, 1-4mm, carbonate infilled, quartz veins, sometimes containting minor disseminated pyrite occur throughout interval.
136.75	140.10	3.35	GRD	GRDA	MG	weakly potassic, trace propylitic granodiorite with moderate argillic zones overprinting potassic altered sections. Alteration is more prominent on interval, in particular argillic alteration. 1-3 mm, stringer , quartz veins with partial carbonate infill(`45 degrees TCA) are more commonly observed in altered interval, are sometimes crosscut by 1-2 mm, calcite veinlets and contain trace disseminated pyrite.
140.10	146.19	6.09	GRD	GRDA	MG	trace potassic, trace propylitic granodiorite interval with intermittent zones of weak to moderately potassic alteration overprinted by weak to moderate argillic alteration (argillic alteration more prominent near vein vein zone contact). 5 mm, light pink aplite dyke intrsution is observed @ 145.12m (~ 50 degrees TCA). 3-4mm, carbonate infilled, pyrite bearing veinlets in altered grd sections are observed.
146.19	146.40	0.21	VEN	GRDA	MG	moderately silicified, vein zone in argillic altered granodiorite. Blebby pyrite, disseminated pyrite, trace and sphalerite are observed in vein section. Vein zone appears brecciated, with argillic altered, brecciated clasts and carbonate infilled veins brecciating host grd being locally observed.
146.40	147.83	1.43	GRD	GRDA	MG	weakly propylitic, trace potassic altered granodiorite overprinted by moderate argillic alteration. From 146.70-147m, light pink (slightly paler due to alteration), aplite dyke intrusions (65 degrees TCA) are observed in altered grd . 2-5mm, dark grey, carbonate infilled, stringer veins occur from 147.30-147.60m where trace disseminated occurs within some stringer veins (~40 degrees TCA). Three, light pink, 3-5 mm, aplite dyke intrusions (40 degrees TCA) are observed from 147.60-147.83m.
147.83	150.58	2.75	GRD	GRDA	MG	trace potassic, trace propylitic granodiorite with intermittent zones weak argillic alteration (as alteration halos near 1-3m, pyrite bearing veins) overprinting existing potassic, propylitic altered sections. Blebby and disseminated pyrite are observed in grey, quartz, carbonate infilled veins (~50 degrees TCA).
150.58	153.00	2.42	GRD	GRD	MG	trace potassic, granodiorite with intermittent moderate potassic, weakly propylitic and argillic/potassic altered zones. Trace 3m-5mm, ankerite infilled, pyrite bearing veinsare observed in propylitic/argillic altered zones(zone might have a trace phyllic overprint; disseminated pyrite, silicified and basal cleavage muscovite crystals observed). Trace 1-3mm, calcite infilled veinlets occur in potassic/argillic altered grd sections.
153.00	155.30	2.30	GRD	GRD	MG	weak to moderate argillic, weak potassic granodiorite and intermitten zones of trace potassic, trace propylitic alteration. Trace 1-2mm, carbonate infilled veins, sometimes containting disseminated pyrite are observed throughout altered interval.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
155.30	157.35	2.05	GRD	GRD	MG	Interval comprised of weakly argillic, trace potassic granodiorite with intermittent zones of moderately argillic, weakly propylitic, trace phyllic granodiorite. A fine grained, green,pink, propylitic, potassic altered granodiorite dyke intrusion is observed @ 155.63-156m. 2-4mm, stringerquartz veins partially infilled by ankerite and calcite , containting blebby pyrite are comonly observed, mostly in argillic/propylitic altered zones. Thinner, 1-2mm, dark grey, pyrite bearing veins crosscut through stringer veinsand are also locally offset by calcite infilled fractures. Trace disseminated pyrite also occurs within host grd in argillic/propylitic/phyllic altered zones.
157.35	161.15	3.80	GRD	GRD	MG	weak to moderate argillic granodiorite interval with intermittent sections of weakly potassic and weakly propylitic altered granodiorite. Trace 2-4 mm, pyrite bearing stringer veins occur in argillic/propylitic altered granodiorite zones. Pyrite in veins occurs within dark grey, fine grained bands and within quartz viens partially infilled by calcite and ankerite. Veins are ~ 50 degrees TCA.
161.15	164.34	3.19	GRD	GRDA	MG	weakly to moderate argillic granodiorite overprinted by weak propylitic alteration and intermittent zones of weak potassic alteration. 1-3mm, dark grey, fine grained, pyrite bearing bands are locally observed in argillic/propylitic altered zones. 2-4mm, quartz veins containting trace disseminated pyrite are also oserved in argillic/propylitic altered zones.
164.34	167.10	2.76	GRD	GRDA	MG	moderate potassic, moderate argillic granodiorite interval with trace potassic overprint zones (near 1-3mm, quartz veinlets). Veins are ~ 40 degrees TCA. Quartz veinlets contain trace amounts of disseminated pyrite.
167.10	168.13	1.03	GRD	GRDA	MG	moderate argillic, trace propylitic altered granodiorite overprinting trace potassic alteration. 2-5mm, calcite, ankerite infilled quartz veins containing disseminated pyrite are locally observed on interval. Trace pyrite blebs are also observed within altered grd host.
168.13	168.44	0.31	VEN	GRDA	MG	bright pink, rhodocrosite infilling quartz veins and brecciating weakly propylitic, trace argillic host granodiorite. Tan, ankerite occurs as inclusions within brecciated zone and appears topartially infill some quartz veins as well. Coloform bands are also observed within vein interva. No significant mineralization is present in vein zone, trace pyrite occurs sporadically within vein zone. What is notable about interval is the purity of the rhodocrosite (bright pink rhodocrosite only seen this pink on this hole).
168.44	170.74	2.30	GRD	GRDA	MG	moderate argillic, potassic granodiorie overprinting trace propylitic alteration. Light pink, fine grained, aplite dyke intrusions are oserved at 168.70 and 169.20 in altered grd interval. Aplite dyke intrusions are crosscut by sub-mm black fine grained veinlets and sub-mm calcite veinlets.
170.74	171.33	0.59	GRD	GRDA	MG	light green, weakly silicified, fine grained, weakly propylitic, argillic granodiorite interval containing pyrite blebs and sub-mm, black sphalerite. Veins @ 170.85 containt blebby pyrite within dark grey , veins which are infilled and brecciated by bright pink rhodocrosite. Rhodocrosite infills clear quartz veins and locally brecciates host granodiorite. Sub-mm sphalerite and possibly galena is appears to be restricted to rhodocrosite veins. Calcite infilled fractures appear to locally offset veins. Veins are ~ 30 degrees TCA.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
171.33	174.85	3.52	GRD	GRDA	MG	weak to moderate argillic, weak to trace potassic altered granodiorite with trace propylitic overprint. Trace 1-4 mm, carbonate infilled veinlets are locally observed on interval.
174.85	176.00	1.15	GRD	GRDA	MG	moderate propylitic alteration overprinted by weak argillic altered granodiorite. Interval contains 2-3mm, dark grey, pyrite bearing stringerveins (40 degrees TCA). Light grey, gouged seam in a 1cm quartz vein is observed at 175.05m. Trace disseminated pyrite is observed in vein zones and sometime within grd host. 2 cm, quartz vein at 175.44m contains red hematite bands and appears to microbrecciate host grd.
176.00	177.20	1.20	GRD	GRDA	MG	weak potassic alteration oveprinted by moderate argillic alteration in granodiorite. Interval is fractured from 176.85-177.10m.
177.20	178.55	1.35	GRD	GRDA	MG	moderate argillic, trace potassic granodiorite containing 2-5 mm, dark grey, pyrite bearing stringer quartz veins. Veins are ~ 40 degrees TCA and are partially infilled by carbonates (mostly calcite).
178.55	181.00	2.45	GRD	GRDA	MG	moderate potassic, argillic granodiorite intervalwith intermittent zones of trace propylitic granodiorite with trace 1-2mm, pyrite bearing, carbonate infilled veinlets. A 1 cm, 15 degree tca, clear quartz vein is observed @ 179.15m.
181.00	183.14	2.14	GRD	GRD	MG	trace potassic, trace propylitic granodiorite with local zonesof weak argillic overprint. 1-2 mm, calcite veinlets and calcite infilling joint surfaces from 181.45-182.30 are observed in granodiorite interval
183.14	184.00	0.86	GRD	GRD	MG	trace potassic, trace propylitic granodiorite with intermittent zones of weak argillic, trace potassic alteration. A 1 cm, dark grey, carbonate infilled vein containing bleby pyrite is observed @ 183.40m (in argillic/potassic altered grd section). Chlorite and calcite infilling fracture parallel to vein (~ 40 degrees tca) adjacent to vein is observed as well.
184.00	185.15	1.15	GRD	GRD	MG	weak to moderately argillic granodiorite with intermittent zones of weak propylitic alteration (as alteration halo in vein near veins) and weakly argillic/potassic alteration. Vein at 84.15m, contains bleby pyrite, is partially infilled by calcite and is ~ 70-75 degrees TCA). 2 mm, quartz vein with propylitic alteration halo is observed 184.30m (no mineralization observed in this vein). Alteration become increasingly argillic proximal to grd-dyke contact. 4 m, vein at 184.90m contains disseminated pyrite, black, fine grained clasts and is partially infilled by calcite.
185.15	185.83	0.68	POR	DYK	MG	light to medium grey porphyry dyke interval with trace clay alteration. From 185.15-185.30 contact grades frfom a light beige feldpathic rich zones, to a ligh-medium brown oxidized clast rich zone. Trace 1-3mm, calcite veinlets are found at 20 and 80 degrees TCA.
185.83	186.75	0.92	POR	DYK	MG	dark purple matrix, porphyry dyke with fracture zones occurring at 186.25-186.55m. Trace 3-4 mm, caronate infilled veins (40 degrees TCA) are observed). Calcite infilling fractures , sometimes micro brecciating porphyry dyke occur locally.
186.75	189.56	2.81	POR	DYK	MG	porphyry dyke exhibiting light red alteration (hematite or clay alteration(?)) and increased black, biotite . Veins are no longer observed on interval only trace, calcite infilled fractures.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
189.56	190.55	0.99	POR	DYK	MG	unaltered, porphry dyke with dark purple matric and local zone of light red alteration (near contact with grd). No veining is observed and biotite content also increases right at the contact with grd
190.55	191.40	0.85	GRD	GRDA	MG	trace potassic, weakly propylitic granodiorite interval.
191.40	192.77	1.37	GRD	GRDA	MG	moderately argillic granodiorite with local zones of moderate propylitic and weakly potassic alteration. Trace 1-2 mm, carbonate infilled veins are locally observed on interval (no significant mineralization observed). Small carbonitic veins are ~ 40 degrees TCA
192.77	193.80	1.03	GRD	GRDA	MG	moderate argillic , weakly propylitic granodiorite interval containing trace, 2-5 mm, dark grey, pyrite bearing veins (~ 40 degrees TCA). Quartz veins contain sub-mm, carbonitic rims. Sub-mm, pyrite bearing bands run ~ 80 degrees TCA. Trace pyrite blebs occur within argillic altered grd.
193.80	195.32	1.52	GRD	GRDA	MG	moderate argillic , weakly propylitic granodiorite containting 1-4 cm, pyrite bearing quartz veins, which locally brecciate host grd, are brecciated and infilled by bright pink, rhodocrosite and ankerite. Trace blebby, pyrite also occurs within grd host. Dark, fine grained bands surround quartz vein zone (coloform bands(?). Vein breccia zone @ 193.85m runs ~ 80 degrees TCA. Sub-mm, fractures locally offset and crosscut through sub-mm, pyrite bearing veinlets(~ 40 degrees TCA). Rhodocrostite infilled vein at 174.75 runs about 55 degrees TCA). Vein contains small, irregular, brecciated calcite clasts within quartz-rhodocrosite vein zone. NOTE: purity of rhodocrosite continues to be observed in hole. So far is the only hole to contain such bright pink, pure (?) rhodocrosite. Vein at 195.16m contains both rhodocrosite and ankerite (rhodocrosite infilling quartz vein and then ankerite surrounds and brecciates rhodocrosite-quartz vein).
195.32	197.14	1.82	GRD	GRDA	MG	moderately argillic granodiorite with local zones of trace potassic and trace propylitic alteration. A rubbly, gouged seam is observed @ 195.35m and contains disseminated pyrite. A 3 mm, quartz vein (45 degrees TCA) with carbonate inclusions contains brassy yellow, soft, chalcopyrite(?) and trace galena and is surrounded by a moderately propylitic alteration halo. Calcite infilling fracture surfaces is locally observed on interval.
197.14	198.29	1.15	GRD	GRDA	MG	trace potassic, weakly propylitic alteration overprinted by moderate argillic alteration in granodiorite. Rubbly, gouged zone is observed from 197.80-198m. A 70 degrees TCA , quartz vein containting calcite clasts and is crosscut by a calcite infilled fracture is observed @ 197.67-197.70m
198.29	199.00	0.71	GRD	GRDA	MG	moderate propylitic altered granodiorite overprinting moderate argillic alteration. 1 cm, quartz vein containing blebby pyrite (or chalco(?); brassy yellow, softer than pyrite,) and trace sphalerite . Trace, calcite and ankerite are observed within quartz vein but otherwise remains unaltered. Vein is ~ 40 degrees TCA. 1-2 mm, pyrite bearing bands , ~ 30 degrees TCA, occur along fracture plane in grd.
199.00	201.55	2.55	GRD	GRDA	MG	moderate argillic granodiorite with local zones of weak potassic and trace propylitic alteration. Trace 1-2mm, dark grey, pyrite bearing veinlets (~ 60 degrees TCA) are locally observed. 1 mm, calcite infilled veinlets and calcite infilled fractures also occur throughout interval

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
201.55	203.20	1.65	GRD	GRDA	MG	moderately argillic, weakly propylitic granodiorite interval with minor gouged, brecciated seams and containing 2-4 mm, carbonate infilled quartz veins sometimes containing trace disseminated pyrite. A 2 cm, quartz vein is observed at 202.16 (80 dedgrees tca). Vein contains dark grey, smoky and clear quartz.
203.20	203.44	0.24	VEN	GRDA	MG	quartz vein zone in altered granodiorite. Dark grey, smoky quartz and clear quartz occur in vein zone with rhodocrosite infilling and brecciating quartz vein locally. Trace ankerite as partiall infill in vein is also observed. Disseminated pyrite and trace sphalerite mostly occurs within dark grey, vein zones (within smoky quartz). Dark grey smokey quartz brecciated clasts are also present within vein zone. (brecciated by clear quartz vein, and partially infilled by carbonates).
203.44	204.22	0.78	GRD	GRDA	MG	moderately argillic, weakly potassic granodiorite interval.
204.22	205.11	0.89	GRD	GRDA	MG	trace potassic altered granodiorite overprinting tra
205.11	207.56	2.45	GRD	GRDA	MG	moderate argillic granodiorite with local zones of weak potassic and trace propylitic alteration. Trace 1- 4mm, pyrite bearing stringer veins (50 degrees TCA) are observed in more altered granodiorite zones. A 3 mm, rhodocrosite infilled, stringer vein running 80 degrees TCA, occurs @ 205.44. Calcite infilled, 1-2 mm fractures crosscut through stringer veins locally.
207.56	207.65	0.09	VEN	GRDA	MG	7 cm, vuggy vein (80 degrees TCA) within moderately argillic, trace propylitic granodiorite containting dark grey, smoky quartz,clear quartz and bright pink rhodocrosite partially infilling and locally brecciatd clear quartz vein. Trace disseminated pyrite is observed in grd host and within dark grey, smoky quartz vein. A 5 mm, light grey gouged, brecciated seam is observed at the contact between grd and vein zone.
207.65	208.64	0.99	GRD	GRDA	MG	moderately argillic granodiorite with local zones of weak to moderate potassic alteration. Trace 2-4mm, dark grey, pyrite bearing veins (~ 35 degrees TCA) are crosscut by 3 m, rhodocrosite infilled quartz veins(~ 80 degrees TCA). Trace pyrite is observed within grd host
208.64	209.30	0.66	GRD	GRDA	MG	moderate argillic, trace propylitic granodiorite interval containing 2-8mm, dark grey, pyrite bearing stringer quartz veins (80 degrees TCA). Minor calcite vein infill occurs within stringer veins. Blebby and disseminated pyrite is locally observed within host grd. Veins appear slightly deformed (irregular)(weakly sheared (?)). 1-2 m, light grey gouged seams are observed near stringer veins.
209.30	209.66	0.36	VEN	GRDA	MG	Weakly silicified, vein breccia zone containing disseminated and blebby pyrite. Vein in breccia is 75 degrees TCA and contains rhodocrosite and ankerite that both infills and locally brecciates quartz veins. (rhodocrosite mainly infills and brecciates clear quartz vein
209.66	211.16	1.50	GRD	GRDA	MG	moderate argillic, trace propylitic granodiorite containting trace 3-5 mm, pyrite bearing, quartz stringer veins. Gouged, weakly sheared brecciated seas is observed at the lower vein breccia-grd contact. Stringer veins occur at 80 and 35 degrees TCA. (lower angled ones are partially infilled with calcite).

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
211.16	212.87	1.71	GRD	GRDA	MG	moderately argillic, weakly potassic granodiorite interval with local zones of trace propylitic alteration. Trace 2-4 m, carbonate vein locally brecciating host grd are observed. Veins run 80 degrees TCA.
212.87	213.56	0.69	GRD	GRDA	MG	trace potassic, trace argillic ,relatively unaltered granodiorite interval containing trace 1-2 mm, calcite infilled veinlets.
213.56	216.41	2.85	GRD	GRDA	MG	moderately argillic granodiorite with local zones of weak potassic and weak propylitic alteration. 2mm-2cm pyrite bearing stringer quartz veins (80 degrees TCA) are locally observed on interval. Veins are partially infilled by carbonates. Coloform bands are observed in vein at 214.97m (dark grey quartz, calcite ,hematite bands). Trace, sub-mm sphalerite is observed in some stringer veins.
216.41	216.94	0.53	GRD	GRDA	MG	moderate propylitic alteration overprinting weak argillic alteration in granodiorite interval. Two 8mm, pyrite-bearing,stringer quartz veins (35 degrees TCA) , with partial carbonate infill are observed on interval.
216.94	219.00	2.06	GRD	GRDA	MG	fractured, trace potassic, trace propylitic granodiorite interval. Trace, 1m, pyrite bearing bands are observed on interval.
219.00	221.34	2.34	GRD	GRDA	MG	trace potassic, trace propylitic granodiorite interval with local zones of moderate argillic, propylitic and potassic alteration (as 1-4 cm, alteration halos near stringer veins). Stringer veins with propylitic altered halos are ` 35 degrees TCA. Veins with argillic alteration halos are 75-80 degrees TCA.
221.34	224.20	2.86	GRD	GRDA	MG	moderately argillic, trace potassic granodiorite with intermitten zones of weak propylitic, trace potassic alteration. 3mm-10 cm quartz veins , sometimes containing trace pyrite are observed on interval. rhodocrosite, ankerite and calcite infilling and locally brecciating clear quartz veins are observed within vein zones. Larger veins form coloform bands with carbonates-quartz. Veins with coloform bands are ` 80 degrees TCA (222.62, 224m). A 2 cm, vein (25 degrees TCA) locally brecciated and infilled by rhodocrosite is observed @ 222.05m.
224.20	226.40	2.20	GRD	GRDA	MG	weakly potassic, trace propylitic granodioriteinterval containing trace 2-5 mm, pyrite bearing veins (30 degrees TCA) are locally observed. Interval is rubbly and fractured from 224.16 at vein contact between potassic/argilic granodiorite and weakly altered grd.
226.40	229.00	2.60	GRD	GRDA	MG	strongly argillic granodiorite interval overprinting local zones of trace potassic, propylitic alteration. Trace 2-5 mm stringer veins containting trace pyrite are locally observed (~40 degrees TCA).
229.00	231.04	2.04	GRD	GRDA	MG	strongly argillic granodiorite interval with increased pyrite bearing, quartz stringer veins. Veins are 40 degrees tca, contain trace pyrite blebs and sometimes brecciate host grd Trace rhodocrosite and ankerite partially infilling larger stringer veins are observed.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
231.04	241.12	10.08	GRD	GRD	MG	strongly argillic granodiorite with local zones of weak potassic and propylitic alteration. 2mm-3 cm, pyrite bearing stringer veins ~ 40 degrees, sometimes infilled and brecciated by carbonates are locally observed throughout interval. Some dark grey, pyrite rich bands run about 70 degrees TCA. Some veins contain trace, sub-mm, sphalerite occuring within carbonitic infill in stringer vein zones is observed. Some stringer veins are ~ 80 degrees TCA(mostly largest and rhodocrosite containing veins). Some stringer veins in the lower portion of the interval containt milky quartz run ~ 30 degrees TCA.
241.12	241.43	0.31	VEN	GRD	MG	irregular, slightly deformed, vein zone containing clear quartz, dark grey smoky quartz, blebby pyrite and partially infilled by rhodocrosite is observed in vein interval. Dark grey matrix appears to locally brecciate clear quartz vein sections and host grd. Trace, sub-mm, sphalerite crystals are observed within rhodocrosite infilled zones. Veins are ` 80 degrees TCA on interval.
241.43	242.52	1.09	GRD	GRD	MG	strongly argillic granodiorite with local zones of trace potassic, propylitic alteration. Two, low angle (20 degrees TCA) quartz veins containing blebby pyrite are observed on interval.
242.52	246.73	4.21	GRD	GRD	MG	Moderate argillic granodiorite with weakly potassic overprint. Trace, dirty quartz, low angle veins(25 degrees) , brecciating host grd are observed @ 243.45m. Trace 1-3 mm, pyrite bearing , stringer veins with coloform bands are observed in slightly propylitic, potassic zones.
246.73	247.30	0.57	GRD	GRD	MG	trace potassic , trace propylitic granodiorite interval
247.30	247.61	0.31	GRD	GRD	MG	moderately propylitic, trace argillic granodiorite containing a 2 cm, 35 degrees TCA, quartz vein. Quartz vein host blebby pyrite in clear quartz and within dark grey, bands. Quartz vein contains light red,clasts (chert?). Calcite infill is also observed on vein.
247.61	249.34	1.73	GRD	GRD	MG	trace potassic, trace propylitic granodiorite interval with trace 1-2 mm, pyrite-bearing, carbonate infilled veinlets (50 degrees TCA).
249.34	250.44	1.10	GRD	GRDA	MG	strongly argillic granodiorite overprinting trace potassic, propylitic altered zones. 1 cm, quartz vuggy veins infilled by carbonates are observed on interval(80 degrees TCA).
250.44	250.70	0.26	VEN	GRDA	MG	Brecciated, quartz veinin moderately propylitic granodiorite. Trace disseminated pyrite occurs in vein zone. Carbonates locally brecciates quartz veins and host grd. Light grey, chalcedony(?)) clasts are observed within brecciated vein zone.
250.70	253.22	2.52	GRD	GRDA	MG	strongly argillic granodiorite with local zones of trace potassic, trace propylitic alteration. 1- 4mm, carbonate infilled, pyrite bearing , vuggy veins are observed throughout interval (65 degrees TCA).
253.22	253.30	0.08	POR	DYK	MG	light grey, light brown, clay altered, weakly oxidized porphyry dyke interval
253.30	253.53	0.23	POR	DYK	MG	dark purple, fractured ,porphyry dyke interval.
253.53	253.93	0.40	POR	DYK	MG	light grey, fractured, rubbly , clay altered porphyry dyke with light brown oxidation near the dyke-grd contact

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
253.93	258.10	4.17	GRD	GRDA	MG	strongly argillic granodiorite overprinting trace potassic, propylitic local zones. Trace vuggy veinlets and vugs in grd occur @ 255m. 2-4 mm, quartz-carbonate veinlets sometimes hosting trace disseminated pyrite are observed (50 degrees TCA).
258.10	258.47	0.37	GRD	GRDA	MG	strongly argillic granodiorite overprinted by moderate potassic alteration. Two, 4-5 mm, vuggy quartz veins containting dark green chlorite at veinlet boundaries are observed(40 degrees TCA). Trace 1-3 mm, carbonate-quartz veinlets (60 degrees TCA) also occur throughout interval.
258.47	260.93	2.46	GRD	GRDA	MG	moderately argillic granodiorite with trace toweakly potassic overprint. Sub-mm quartz carbonate veinlets occur sporadically throughout interval.
260.93	261.00	0.07	POR	VEIN	MG	light grey, fine grained dyke intrusions proxiaml to vein zone within a moderately argillic, trace potassic granodiorite.
261.00	261.15	0.15	VEN	VEIN	MG	Polymetallic vein zone (55 degrees TCA) in moderate argillic, trace propylitic granodiorite. Polymetallic vein is 7 cm, contains blebby pyrite, trace arsenopyrite, trace sphalerite and possibly galena (sphalerite and galena observed near rhodocrosite zones. Dark grey,quartz hosts minerals and locally brecciates a clear quartz vein, and locally brecciates host grd host. Vein is offset 4 cm, by a light grey carbonitite,infilled fracture. Rhodocrosite surrounding vein displays a vuggy texture with acicular-like intrusions in contact with dark grey mineralized quartz. Coloform bands are also observed in rhodocrosite surrounding vein. Pyrite blebs surround smaller brecciated, quartz clasts within vein zone.
261.15	261.65	0.50	GRD	GRDA	MG	strongly argillic, trace propylitic granodiorite interval overprinting trace potassic altered zones.
261.65	266.28	4.63	GRD	GRDA	MG	strongly argillic granodiorite with intermittent zones of moderate potassic and trace argillic alteration. 2-6 mm, carbonate infilled, 70 degrees TCA, stringer veins and local vuggy veinlets infilled by quartz crystals occur throughout interval. Some stringer veins have reddish,hematite infill and a few veinlets contain trace disseminated pyrite within dark grey, bands within veinlets. Coloform bands are also commonly observed in stringer veins on interval. Ankerite interstitially infilling and locally breccciating quartz vein occurs in lower section of interval at 265.47m. Calcite infilled fractures, locally crosscut through ankerite infilled vein.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
266.28	266.79	0.51	VEN	GRDA	MG	polymetallic vein zone within weak propylitic, trace potassic granodiorite overprinted by trace phyllic alteration (increased quartz clasts,basal cleavage muscovite(?) and disseminated pyrite locally observed in host grd). Interval is comprised of 2mm-2 cm, vuggy veins containing blebby pyrite, trace arsenopyrite , galena and sphalerite. Chalcedony, rhodocrosite and ankerite partially infill polymetallic veins . On fracture surface in light greyish chalcedony infilled vein, boytroidal, crystals are observed along fractured surface as well as euhedral calcite crystals. Coloform bands are commonly observed in vein zone. Veins range from 40-80 degrees TCA (steeper angled ones are thicker, ankerite-rhodochrosite rich veins. 40 degrees vein infilled by calcite where sphalerite and galena are located the the vein edges. Blebby pyrite occurs at vein boundaries and around quartz vein boundaries. In 80 degrees TCA, rhodocrosite infilled vein, trace galena and sphalerite are contained within rhodocrosite infill and within dark grey quartz matrix.
266.79	267.59	0.80	GRD	GRDA	MG	strongly argillic, trace propylitic, potassic granodiorite interval. trace, 1-3 mm, carbonate infilled, veinlets are locally observed on interval. Veinlets are 60 degrees TCA and are locally crosscut by a low angle (15 degrees Tca) calcite infilled veinlet.
267.59	268.72	1.13	GRD	GRDA	MG	interval comprised of trace potassic trace propylitic granodiorite and intermittent zones of weakly argillic, weakly to moderately potassic granodiorite and trace propylitic granodiorite. Trace, 2-3 mm, pyrite bearing veinlets sometimes containting carbonate infill are locally observed on interval. veinlets are 60-85 degrees TCA (most of them are 60 only vein at 268.35 run perpendicular to core axis.
268.72	269.75	1.03	GRD	GRDA	MG	moderately argillic , weak to moderate propylitic granodiorite containing 1-3 mm, pyrite bearing stringer quartz veins. Veins in mosre propylitic altered sections contain disseminated pyrite around veinlets and within grd host. Some veinlets contain carbonate infill and sometimes trace, sub-mm sphalerite is locally observed. Vein At 269.41m, contains light brown, carbonitic infill (ankerite(?)).
269.75	270.95	1.20	GRD	GRDA	MG	weak to moderate potassic, moderate argillic, trace propylitic granodiorite interval. Trace 6-8mm, light grey carbonate infilled veinlets are observed on interval and locally crosscut through 1-2 mm, 80 degrees TCA, quartz-carbonate veinlets. At 270.61, medium green, pinkish, fine grained (dyke(?)) intrusion is observed on altered granodiorite interval.
270.95	272.34	1.39	GRD	GRDA	MG	weakly potassic, argillic granodiorite with zones of weak to moderate propylitic alteration. 1mm-1 cm, 40 degrees TCA, vuggy veinlets are locally observed throughout granodiorite interval. vuggy veins contains light pink, rhodocrosite and calcite infill and blebby pyrite is hosted in dark grey bands within vein. Rhodocrosite infilled vuggy veins contain sub-mm, trace galena and sphalerite.
272.34	272.90	0.56	GRD	GRDA	MG	moderate argillic trace potassic granodiorite interval.
272.90	273.08	0.18	GRD	GRDA	MG	moderate propylitic granodiorite interval with light grey, gouged brecciated seam. A 3 mm, dark grey, slightly deformed veinlet is observed in propylitic altered interval. dark grey veinlet surround light beige, carbonate infill.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
273.08	274.52	1.44	GRD	GRDA	MG	trace potassic/trae propylitic granodiorite with local zones of moderate potassic, weak argillic alteration. Trace sub-mm, calcite infilled veinlets are observed (40 degrees TCA).
274.52	275.53	1.01	GRD	GRDA	MG	strongly argillic granodiorite with loca zones of weak potassic and weak propylitic alteration. Trace 1-2 mm, 50 degrees TCA, carbonate veinlets are observed on interval
275.53	277.13	1.60	GRD	GRDA	MG	trace potassic, propylitic granodiorite with trace1-3mm , dark grey,veinlets containting trace blebby pyrite (50 degrees TCA). Weak argillic, alteration halos are observed near veinlets bearing zones.
277.13	278.29	1.16	GRD	GRDA	MG	strongly argillic, trace potassic granodiorite with local zones of increased potassic and trace propylitic alteration. A 1 cm, carbonate infilled quartz vein (60 degrees TCA) containing trace pyrite blebs is observed @ 277.45m. A 2 mm, ankerite band surround a calcite infillef quartz vein. Pyrite is mostly hosted in dark grey, fine grey bands. A light grey/greenish, fine grained , dyke(?) intrusion occurs @ 277.90 (60 degrees Tca) and contains sub-angular quartz, feldspathic and black irregular clasts.
278.29	280.07	1.78	GRD	GRDA	MG	trace potassic, propylitic, relatively unaltered granodiorite interval with local zones of moderate potassic and weak argillic alteration. A 2 cm, light pink, fine grained aplite dyke intrusion is observed at 278.978m. 3mm-1 cm, carbonate infilled veinlets (65 degrees TCA) are observed within potassic/argillic altered grd. Larges veinlet contains ankerite which is crosscut by a 3 mm, calcite infilled quartz vein (i.e. 279.80m). A 4 cm,light pink aplite dyke intrusion occurs @ 279.92m (35 degrees TCA).
280.07	282.65	2.58	GRD	GRDA	MG	moderate to strongly argillic, trace potassic, propylitic granodiorite interval containing a 15cm, light grey, gouged, brecciated seam @ 280.66m and 2-5 mm, dark grey, rhodocrosite infilled, pyrite bearing veinlets which offset light pink, aplite intrusions. (Veinlets are 30 degrees TCA and appear to offset a 50 degree aplite dyke about 10 cm). Fractures locally offset sub-mm carbonate veinlets.
282.65	283.52	0.87	GRD	GRDA	MG	weakly propylitic, argillic granodiorite interval with local zones of weak potassic alteration (on lower interval section). 2mm-1 cm, carbonate infilled, quartz veinlets are locally observed (60 degrees TCA). Vein at 283 , contains light pink,rhodocrosite containing sub-mm, trace galena and sphalerite. Dark grey veinlets host trace, disseminated pyrite
283.52	285.06	1.54	GRD	GRDA	MG	weakly argillic trace potassic granodiorite interval containing a 1 cm, ligh pink, fine grained aplite dyke intrusion (65 degrees TCA) which is locally crosscut by calcite infilled veinlets and fractures.
285.06	286.00	0.94	GRD	GRDA	MG	interval comprised of weakly potassic, granodiorite with weakly propylitic altered local zones. An ankerite, calcite infilled vein locally brecciating host grd is observed at 285.27 (70 degrees TCA). Sub-mm pyrite and sphalerite are observed in carbonate infilled vein. Vein locally offset and crosscut by fracturing. A 2 cm, light pink aplite dyke intrusion is observed at 285.95m (40 degrees TCA).

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
286.00	286.86	0.86	GRD	GRDA	MG	weakly propylitic, trace argillic granodiorite interval containing semi chaotic, 2-5mm, calcite infilled veinlets which locally brecciate host grd. Dark grey bands on veinlet zones locally host trace, disseminated pyrite. Carbonate veinlets brecciating host grd run 70 degrees TCA. Bright pink rhodocrosite partially infilling and locally brecciating quartz veinlet and hosting sub-mm, sphalerit is observed @ 286.80m.
286.86	288.22	1.36	GRD	GRDA	MG	moderately argillic, weakly potassic granodiorite with local zones of weak to moderate propylitic alteration. 1-2 cm, carbonate infilled, veinlets forming coloform bands occur at 30 and 70 degrees TCA. 70 degree vein occurs @ 287.26 and contains red hematite, and ankerite-calcite-quartz coloform bands. Hematite appears to interstitially infill a dark, grey vein that microbrecciates quartz vein locally. Low angle vein observed @ 288m contains ankerite,calcite and light pink rhodocrosite which locally brecciate host grd (no significant mineralization observed in either vein). Fine grained, pink, aplite dyke intrusion (60 degrees TCA) also occur within altered grd interval and one dyke intrusion appears to be offset by irregular quartz clast.
288.22	289.25	1.03	GRD	GRDA	MG	weakly argillic, weakly potassic granodiorite with local zones of trace potassic , argillic alteration (mostly as alteration halos near pyrite bearing veinlets). Veinlets at 288.88, are 80 degrees TCA , contain blebby pyrite and are partially infilled by calcite. Veinlets crosscut through 3 cm, light pink, fine grained aplite dyke intrusion present at 289m (55 degrees TCA).
289.25	290.60	1.35	GRD	GRDA	MG	moderately argillic, weakly potassic, granodiorite interval displaying dark red, hematite alteration. Dark red alteration observed in 20 degrees TCA,1-2 mm, veinlets. 1-2 mm, calcite infilled fractures crosscut through hematite altereted veinlets.
290.60	291.08	0.48	GRD	GRDA	MG	moderately argillic, weakly potassic and trace propytic granodiorite interval. Trace, 1 mm, veinlets (80 degrees TCA) veinlets are locally observed throughout interval and sometimes contain trace, disseminated pyrite.
291.08	291.72	0.64	GRD	GRDA	MG	moderately argillic, weakly potassic, trace propylitic granodiorite interval containing light green, chlorite bearing inclusions and 1-4mm,ankerite infilled veinlets (50 degrees TCA). Ankerite infilled vein contains black, sub-mm bands which interstitially surround ankerite infilled veinlet.
291.72	292.05	0.33	VEN	GRDA	MG	moderately propylitic, trace argillic granodiorite interval containting 2mm- 3 cm, carbonate infilled quartz veinlets which brecciate host grd . Trace, sub-mm, pyrite and sphalerite are observed within quartz vein and within dark grey, fine grained bands . Orange/brownish, carbonitic infill is also observed surronding aknerite infilled vein. Small fractures crosscut through vein zone. Veinlets are 80 degrees TCA. 103 mm, quartz vuggy veinlets are also observed at 292.02m.
292.05	293.00	0.95	GRD	GRDA	MG	moderate argillic, trace potassic, trace propylitic granodiorite containing ankerite and calcite infilling fractures.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
293.00	293.24	0.24	VEN	GRDA	MG	argillic, trace propylitic granodiorite with light grey, gouged brecciated seams and weakly sheared. 1-3mm, dark grey, clear and smoky quartz veinlets are observed in sheared interval. calcite and ankerite infilling and surrounding veinlets is observed on interval. Veinlets are deformed due to shearing and appear to be locally offset by fracturing and sheared texture. Trace disseminated pyrite hosted in dark grey, veinlets is observed on vein section. Veins are ~ 70 degrees TCA and shear fabric appears to be 40 degrees TCA.
293.24	294.12	0.88	GRD	GRDA	MG	moderate argillic,trace propylitic granodiorite interval containing a 1 cm, ankerite infilled quartz vein. Coloform bands are also observed in veinlet (80 degrees TCA). Ankerite appears to infill a milky quartz vein which partially repaces a dark grey, fine grained , pyrite hosting veinlet.
294.12	294.34	0.22	GRD	GRDA	MG	gouged, brecciated section of moderate argillic, trace propylitic granodiorite. Brecciated clasts include K-spar, chlorite and feldspathic granodiorite clasts.
294.34	296.00	1.66	GRD	GRDA	MG	weakly argillic, weakly potassic granodiorite interval exhibiting 1-4mm, light grey gouged seams occur near aplite dyke intrusion@ 295m. Aplite dyke intrusion is 30 degrees TCA.
296.00	297.60	1.60	GRD	GRDA	MG	moderately argillic, weakly potassic, trace propylitic granodiorite containing 3mm-1cm, carbonate infilled , quartz veinlets locally hosting trace disseminated pyrite (pyrite mostly within dark grey bands in veinlets). Ankerite coloform bands surrounding quartz vein are observed at 296.85m veinlets are ~ 60 degrees TCA.
297.60	298.50	0.90	GRD	GRDA	MG	weakly sheared, locally gouged brecciated, moderate argillic, trace propylitic granodiorite interval. sheared dark , fine grained bands appear to locally brecciate host grd as well. Sheare fabric appears to be 30 degrees TCA. Carbonate infilled , slightly deformed veinlets are locally observed on interval (~ 60 degrees TCA). Trace disseminated pyrite locally hosted on dark grey, fine grained bands is also observed throughout interval.
298.50	299.81	1.31	GRD	GRDA	MG	moderately argillic, weakly potassic granodiorite with local zones of trace to weak propylitic alteration. 1-2 mm, dark grey bands (80 and 60 degrees Tca) locally hosting disseminated pyrite are observed throughout interval.
299.81	301.13	1.32	GRD	GRDA	MG	moderate propylitic , weakly argillic granodiorite ith local zone of moderate argillic, trace propylitic granodiorite. Propylitic altered sections contain 2-5mm, dark grey, fine grained veinlets locally hosting blebby and disseminated pyrite. Interstitial fine grained pyrite is observed on granodiorite proximal to veinlets. Small, stringer veins are 80 degrees TCA and largest veinlet @ 300.85 m appears vuggy , is 60 degrees Tca and is partially infilled by carbonates. Rhodocrosite infilled veinlets @ 301m, contain sub-mm sphalerite. Calcite infilled fractures, locally offset pyrite-hosting stringer veinlets.
301.13	301.71	0.58	GRD	GRDA	MG	moderate argillic, trace propylitic granodiorite interval containing trace 1-3mm, 80 degrees TCA quartz veinlets.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
301.71	302.36	0.65	GRD	GRDA	MG	moderate argillic, trace potassic/propylitic granodiorite displaying gouged brecciation and calcite infilled , semi chaotic fracturing in lower interval zone (from 302m). Coloform carbonate-quartz veinlets perpendicular to core axis and dark grey, fine grained, slightly deformed, veinlets locally hosting pyriteare observed on interval. Fractures locally offset and crosscut through dark grey, carbonate infilled veinlets. Trace disseminated pyrite also occurs within granodiorite interval proximal to veins.
302.36	303.80	1.44	GRD	GRDA	MG	Moderate argillic, trace propylitic/potassic granodiorite interval ith local zones of weak proptliric alteration, containing 1-3 mm, quartz veins locally hosting pyrite (80 degrees TCA). Some clasts on interval display reddish/ light brown alteration (oxidation(?)). 1mm, dark grey veinlet containing trace pyrite are observed @ 40 degrees TCA.
303.80	304.00	0.20	GRD	GRDA	MG	gouged, brecciated, moderate argillic, trace propylitic granodiorite. Dark grey, fine grained bands and clasts in gouged brecciated section locally host disseminated pyrite. Gouge brecciated seam runs ~ 15 degrees TCA.
304.00	305.34	1.34	GRD	GRDA	MG	strongly argillic, trace potassic/propylitic granodiorite ith local zone of increased potassic/proyplitic alteration (304-304.26- clasts are orange/reddish). Trace 1-2 mm, veinlets perpendicular to core axis , locally host , trace, disseminated pyrite. 2-4mm, low angle (30 degrees TCA) carbonate veinlets locally brecciating host granodiorite areobserved on interval as well
305.34	307.87	2.53	GRD	GRDA	MG	moderately argillic, trace propylitic, phyllic altered granodiorite interval locally hosting pyrite in dark grey, finegrained clasts within granodiorite and in dark grey, carbonate infilled veinlets. Bright pink rhodocrosite partially infills and brecciates clearquartz veinlets. Vein @ 305.50 is 80 degrees TCA, locally hosts pyrite in dark grey bands ithin vein zone and light pink rhodocrosite locally brecciated clear quartz vein. Sub-mm sphalerite hosted in rhodocrosite rich zones is locally observed throughout interval. A fine grained, tan, inclusion at 306 contains irregular,dark grey inclusions that locally host fine grained pyrite as well. Slightly deformed(weakly sheared) veinlets and smallgouged seams are observed at 306.47m. Rhodocrosite in vein at 207.40m, locally hosts sub-mm galena and sphalerite (mostly observed at the vein edges). Largest vein zone (60 degrees), observed at 307.65m, is comprised of 6 veinlets ranging from 1-8mm and some display vuggy texture , and display less carbonate infill than other veinlets on interval. (rhodocrosite and ankerite mostly observed intruding veinlets at the vein edges.
307.87	310.23	2.36	GRD	GRDA	MG	moderate argillic, trace potassic, propylitic granodiorite with intermittent zones of moderate propylitic,trace potasic altearation. Vein @ 308.35m is vuggy, is infilled by light brown, tan ankerite and chalcedony(?) (60 degrees TCA). Light grey, carbonates infilling propylitic and potassic alteredzone near dyk contact occur as irregular inclusions in grd. Some clasts near grd-dyke contact are brownish-orange (oxidized or clay altered).
310.23	311.19	0.96	QFP	DYK	MG	grey/brownish, clay altered quartz feldspar porphyry dyke interval containting 2-7mm, quartz veinlets that locally brecciate host dyke. Small, 1-2mm, gouged brecciated seams are alsoobserved on interval

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
311.19	315.47	4.28	QFP	DYK	MG	dark purple, quartz feldspar porphyry dyke interval with local gouged brecciated and locally fractured zones. Quartz-carbonate veinlets sometimes locally brecciate host grd. Some gouge seams are 40 degrees TCA. Some gouged seams are 80 degrees tca. 1-2mm, calcite infilled fractures locally crossut through veinlets.
315.47	315.77	0.30	QFP	DYK	MG	purple-light grey , gouged brecciated quartz feldspar porphyry dyke interval. contact between dyke and grd is gouged, brecciated(faulted contact(?)), Light grey, gouged-brecciated section is composed of grd fragments.
315.77	316.11	0.34	GRD	GRDA	MG	weakly sheared, moderately propylitic, argillic granodiorite interval near quartz feldspar porphyry dyke grd contact. (shear fabric ~ 30 degrees TCA).
316.11	317.48	1.37	GRD	GRDA	MG	moderate argillic, trace potassic granodiorite with local zones of moderate propylitic alteration . Fine grained,light green, purple inclusion is observed at 316.50 on granodiorite interval.
317.48	318.52	1.04	QFP	DYK	MG	medium grey, clay altered quartz feldspar porphyry dyke interval containing quartz-carbonate (80 degrees TCA) veinlets. Calcite infilling fracture surfaces is commonly occuring throughout interval.
318.52	319.55	1.03	QFP	DYK	MG	light grey, clay altered, quartz feldspar porphyry dyke interval displaying vuggy texture on quartz-carbonate veinlets. Veinlets contain subhedral calcite inclusions within vuggy quartz veinlets. Euhedral quartz crystals occur within vugs.
319.55	321.56	2.01	QFP	DYK	MG	light-medium grey , clay altered quartz feldspar porphyry dyke interval. lower portion of interval has soft, clayey gouged seas, is locally fractured and contains 1-2mm, carbonate veinlets (50 degrees TCA).
321.56	323.67	2.11	QFP	DYK	MG	dark purple, unaltered, quartz feldspar porphyry dyke interval
323.67	324.70	1.03	QFP	DYK	MG	dark purple, quartz feldspar porphyry dyke interval with local zones of light grey,clay alteration and soft, gouged, brecciate seams.
324.70	325.50	0.80	QFP	DYK	MG	light-medium grey, clay altered, fractured, quartz feldspar porphyry dyke interval containing trace 1-2mm, slightly deformed,calcite veinlets (50 degrees TCA).
325.50	326.88	1.38	QFP	DYK	MG	dark purple, fractured quartz feldspar porphyry dyke interval displaying minor gouge brecciation and containing trace 1-2 m, quartz-carbonate veinlets. Fracturing increases in lower interval section.
326.88	327.84	0.96	QFP	DYK	MG	fractured, mlight-medium grey, clay altered quartz feldspar porphyry dyke interval containing trace, 1-2mm, quartz-carbonate vienlets are carbonate infilled fractures are observed.
327.84	328.49	0.65	GRD	GRD	MG	strongly argillic, moderately potassic granodiorite interval containing trace 1-2mm, carbonate-quartz veinlets (40 degrees TCA). Ankerite and calcite appear to infill and locally brecciate host grd.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
328.49	330.04	1.55	GRD	GRD	MG	strongly argillic granodiorite with intermittent zones of moderate propylitic and weak potassic alteration. 2-7 mm, quartz-carbonate veinlets (80 degrees TCA) are locally observed (carbonate infilling vein is light grey and slightly reactive to HCL). A low angle (30 degrees TCA) vuggy vein is observed at 328.90m where calcite and ankeirte partially infill and locally brecciate quartz vein. Veins at 328.49m exhibit vein restricted, calcite fractures perpendicular to vein direction. Vein zone appears weakl to moderately silicified and light brown/tan carbonate appears to surround quartz-carbonate vein zone. Carbonates locally brecciate host granodiorite in zone as well.
330.04	331.50	1.46	GRD	GRD	MG	moderately argillic, potassic granodiorite interval displaying fracturing and gouged brecciated seams in lower intervalsection proximal to grd-quartz feldspar porphyry dky contact. Trace 1-3mm, carbonate infilled veinlets (40 degrees TCA) are locally observed throughout interval.
331.50	331.97	0.47	QFP	DYK	MG	light to medium grey, clay altered , gouged brecciated section of quartz feldspar porphyry dyke.
331.97	332.25	0.28	QFP	DYK	MG	purple-grey, clay altered, fractured , quartz feldspar porphyry dyke interval.
332.25	333.15	0.90	QFP	DYK	MG	purple-grey, clay altereted, gouge brecciated, quartz feldspar porphyry dyke interval
333.15	333.52	0.37	FLT	DYK	MG	light to medium grey , rubbly, quartz feldspar porphyry dyke interval. faulted section proximal to quartz feldspar porphyry dyke-grd contact
333.52	334.00	0.48	FLT	GRDA	MG	light grey, faulted ,rubbly, argillic granodiorite interval. Trace , pyrite is locally hosted within dark grey, gouged seams in grd interval. (faulted contact between quartz feldspar porphyry dyke and grd).
334.00	334.49	0.49	GRD	GRDA	MG	faulted contact footwall comprised of strongly argillic, trace potassic/propylitic granodiorite. Feldspathic clasts near vein zone are light brown/orange altered (oxidation(?)). Trace 1-3mm, dark grey, veinlets (80 degrees TCA) are locally observed on interval
334.49	334.79	0.30	VEN	GRDA	MG	strongly argillic, trace propylitic granodiorite vein zone. Interval contains 2mm-1 cm, rhodocrosite infilled, quartz veins which locally host pyrite in dark grey , fine grained bands. Light pink, rhococrosit appears to locally brecciate host quartz vein. Sub-mm , sphalerite crystals are observed within rhodocrosite rich zones. Veins are 80 degrees TCA.
334.79	338.33	3.54	GRD	GRDA	MG	strongly argillic moderate potassic granodiorite with local zones of trace propylitic alteration (mostly as alteration halo near veinlets). Trace 1-5mm, quartz-carbonate veinlets are locally observed throughout interval , sometimes hosting trace, disseminated pyrite (veins are 80 degrees TCA).
338.33	340.11	1.78	GRD	GRDA	MG	moderate argillic interval with local zones of moderate potassic alteration. 5-8mm, quartz-carbonate veinlets (30 degrees TCA) are hosted in weakly propylitic granodiorite zones.
340.11	340.57	0.46	GRD	GRDA	MG	gouged brecciated, fractured, moderately argillic granodiorite containting 4-6mm, quartz-carbonate veinlets (60 degrees TCA). Dark grey, fine grained, veinlets locally ohsting trace pyrite are observed around quartz-carbonate vein. Quartz vein appears to locally brecciate host grd as well.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
340.57	342.00	1.43	GRD	GRDA	MG	moderatelyargillic, weakly potassic altered granodiorite interval.
342.00	342.68	0.68	GRD	GRDA	MG	moderately argillic, trace propylitic granodiorite interval exhibiting gouged brecciated seams and weak shear fabric in dark grey, quartz vein zone @ 342.55m. Three , 3-4m stringer quartz-carbonate veinlets are observed proximal to gouge brecciated zone (50 degrees TCA) and locally host trace, disseminated pyrite. Veins in shear zone appear slightly deformed (shear fabric 40 degrees TCA(?) and locally host disseminated pyrite within dark gre, fine grained quartz veinlets. Veins appear to locally microbrecciate host grd. At 342.14m, a quartz-carbonate, discontinuous veinlet forming coloform bands is locally observed (80 degrees TCA0.
342.68	343.05	0.37	GRD	GRDA	MG	moderately argillic, weakly potassic granodiorite interval
343.05	344.85	1.80	GRD	GRDA	MG	trace potassic, trace propylitic, relatively unaltered granodiorite interval. a dark green, fine grained clasts inclusion is observed at the contact between unaltered and argillic granodiorite interval.
344.85	345.50	0.65	GRD	GRDA	MG	moderately potassic, weakly argillic, trace propylitic granodiorite interval. Trace, 1 mm, dark grey, veinlets (80degrees TCA) are sporadically observed on interval.
345.50	349.37	3.87	GRD	GRD	MG	white/black, unaltere granodiorite interval with trace 2-5mm, quartz-carbonate veinlets (60 degrees TCA) within a moderate propylitic (2-4cm) alteration halo.
349.37	351.33	1.96	GRD	GRD	MG	trace potassic, trace propylitic, relatively unaltered granodiorite with local sections of moderately propylitic, potassic , trace phyllic alteration . 1-2 mm, dark grey, ,veinlets (80 degrees TCA) locally host trace disseminated pyrite. A 5 mm, quartz- carbonate veinlets observed at 349.65m , locally brecciates host grd. Within vein, carbonates appear to locally brecciated clear quartz vein as well. A 2 cm, (50 degrees TCA) quartz-carbonate vein is observed within a green/beige, fine grained inclusions within granodiorite interval (no significant mineralization is observed in vein zone).
351.33	355.30	3.97	GRD	GRD	MG	white/black , unaltered granodiorite interval with sporadic, moderate propylitic alteration halos within 2-6 mm, quartz carbonate veinlets (60 degrees TCA). 5 mm, light pink, aplite dyke intrusion is observed at 40 degrees TCA and is locally crosscut by calcite infilled, discontinous veinlets and calcite infilled fractures.
355.30	360.36	5.06	GRD	GRD	MG	white/black unaltered granodiorite with intermittent zones of trace potassic alteration. Trace, 2-4mm, quartz carbonate veinlets (60 degrees TCA) within 2-3 cm, propylitic alteration halos occur on interval.
360.36	360.75	0.39	GRD	GRD	MG	moderately argillic, potassic, trace propylitic granodiorite interval. Semi chaotic, quartz-carbonate veins locally brecciating host granodiorite are observed at 360.36m. Carbonate vein appears to be replacing an existing clear quartz vein (clear quartz surrounded by calcite veining. 1-2 mm, quartz veinlets (70 degrees TCA) are locally crosscut by calcite vein breccia.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
360.75	361.00	0.25	VEN	GRD	MG	weakly sheared, gouged brecciated , moderately argillic trace propylitic granodiorite contianting a 3 cm, dark quartz vein within gouged, brecciated seams. Vein is 60 degrees TCA, dark grey/purple and contains blebby galena, sphalerite, trace arseno pyrite. A clear quartz vein appears to surround polymetallic vein. (clear quartz vein came in first then dark, polymetallic quartz vein infilled and replaced it(?)). Pyrite islocally hosted in dark grey, 1-2mm, fine grained bands within shear zone and within polymetallic vein zone.
361.00	361.45	0.45	GRD	GRD	MG	beige , medium pink, fine grained moderately argillic , potassic granodiorite vein zone footwall. From 361.19-361.45m, potassic alteration increases and 1-2 mm,calcite veinlets are locally observed (60 degrees TCA). A 4mm, quartz-carbonate ,60 degrees TCA veinlet is observed in lighter beige section at 361.14m.
361.45	362.44	0.99	GRD	GRD	MG	trace potassic, relatively unaltered granodiorite interval with local zones of moderate argillic, trace potassic and propylitic granodiorite. Two , 60 degrees TCA, quartz carbonate veinlets are locally observed at 361.70m. Calcite appears to infill fractures and locally brecciate host grd within vein zone.
362.44	372.89	10.45	GRD	GRD	MG	black/white unaltered granodiorite interval containing trace 2-3 mm, 25-80 degrees TCA, quartz carbonate veinlets . Potassic, propylitic,2-3 cm, alteration halos are observed within veinlet zones . No significant mineralization observed in unaltered granodiorite interval
372.89	374.84	1.95	GRD	GRDA	MG	trace to weakly potassic granodiorite interval with local fractured zones and containing trace 1-2mm, veinlets locally hosting trace, disseminated pyrite.
374.84	375.18	0.34	VEN	GRDA	MG	moderate propylitic, trace argillic granodiorite interval containing, 4, 2-4mm, quartz-carbonate veinlets locally hosting pyrite, trace sphalerite and galena. Veinlets are 80 degrees TCA. Ankerite appears topartially infill nd replace existing calcite veinlet and quartz veinlets on interval. pyrite is locally hosted in dark grey, fine grained bands within vein zone. Trace disseminated pyrite is also hosted in altered granodiorite interval.
375.18	379.90	4.72	GRD	GRDA	MG	trace potassic, relatively unaltered granodiorite interval with intermittent zones of weakly potassic, propylitic alteration and moderate propylitic altearation (mostly as alteration halo near veinlets). Trace 1-2 mm, quartz - carbonate veinlets occur sporadically throughout interval (60 degrees TCA).
379.90	381.35	1.45	VEN	GRDA	MG	moderate propylitic granodiorite interval containting a 2 cm, polymetallic vein at 25 degrees TCA. Darker section of quartz vein locally host blebby pyrite, galena, sphalerite and sub-mm arseno pyrite. Clear quartz located within dark grey, polymetalliz vein zone contains minor rhodocrosite, ankerite inclusions.
381.35	382.00	0.65	GRD	GRDA	MG	trace potassic , relatively unaltered granodiorite interval
382.00	382.70	0.70	GRD	GRDA	MG	weakly argillic, weakly potasssic granodiorite interval. a 40 degrees TAC, quartz-carbonate vein is observed at 282m
382.70	384.57	1.87	GRD	GRDA	MG	trace potassic, relatively unaltered granodiorite with local zones of weak propylitic, argillic alteration.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
384.57	385.18	0.61	GRD	GRDA	MG	weakly propylitic, argillic, trace potassic granodiorite interval. 2-4 mm, quartz-carbonate veinlets are observed (60 degrees TCA).
385.18	386.77	1.59	GRD	GRDA	MG	trace potassic, propylitic , relatively unaltered granodiorite interval containing trace, 1-2mm, carbonate veinlets (45 degrees TCA)
386.77	387.41	0.64	GRD	GRDA	MG	moderately potassic, weakly argillic, trace propylitic granodiorite interval a 4 m, 50 degrees TCA, quartz carbonate vein. Trace , disseminated pyrite is locally hosted within 2 mm, dark grey bands within vein zone. Trace blackjack sphalerite is locally observed within carbonate replaced vein zone. Carbonates appear to locally brecciate vein.
387.41	390.73	3.32	GRD	GRDA	MG	trace potassic, relatively unaltered granodiorite interval. trace 1-2mm, carbonate veinlets occur sporadically thorughout interval (60 degrees TCA).
390.73	391.51	0.78	GRD	GRDA	MG	moderately potassic, argillic granodiorite interval.
391.51	391.93	0.42	GRD	GRDA	MG	weakly propylitic, argillic granodiorite interval containing 4 mm, dark grey, vuggy veinlets (35 degrees TCA).
391.93	393.00	1.07	GRD	GRDA	MG	trace potassic ,propylitic granodiorite interval.
393.00	398.25	5.25	GRD	GRDA	MG	strongly argillic, weakly potassic granodiorite interval containing local fractured zones (i.e. 286.80m) and trace 2-3mm, carbonate veinlets (40 degrees TCA).
398.25	400.21	1.96	GRD	GRDA	MG	trace potassic, propylitic, mrelatively unaltered granodiorite with local zones of weak potassic,argillic alteration.
400.21	401.73	1.52	GRD	GRDA	MG	strongly argillic, moderately potassic granodiorite containing a low angle(20 degrees) reddish, carbonate veinlet.
401.73	402.34	0.61	GRD	GRDA	MG	moderately propylitic, weakly argillic granodiorite interval containting 1-2 cm, quartz -carbonate veins which locally brecciate host grd. Trace disseminated pyrite is locally hosted within dark grey veinlets. Vein zone is 80 degrees TCA.
402.34	403.71	1.37	GRD	GRDA	MG	weakly potassic granodiorite with intermittent zones of weak propylitic and weak argillic alteration.

Quartz-carbonate veins within propylitic altered granodiorite locally host bleby pyrite, trace galena and sphalerite. Veinlets at 375m, are 80 degrees TCA, contain blebby pyrite and sphalerite and sub-mm galena, and are partially infilled and locally brecciated by ankerite. Ankerite appears to replace calcite infilled veinlets as well. Trace disseminatd pyrite is also hosted within propylitic altered granodiorite. Vein at 380.20 is 30 degrees TCA, and locally hosts pyrite, galena, sphalerite and trace arseno pyrite within dark grey, quartz vein zone. Cleat quartz is observedwithin polymetallic vein and minor rhodocrosite and calcite infill is present in both veins.

393.00	403.71	10.71	GRD	MG	interval comprised of strongly argillic, weakly potassic granodiorite and intermittent zones of moderately propylitic,argillic granodiorite and trace potassic, relatively unaltered granodiorite. Quartz-carbonate veinlets are more prominent in propylitic altered granodiorite zones (i.e. 402m, 80 degrees TCA). A low angle veinlets is observed at 401 m in potassic altered granodiorite zone. (20 degrees TCA). Vein zone appears to locally brecciate host grd.

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
7.31	8.13	VB	37	50	NUL	1	Smokey breccia cutting weathered and oxidized granodiorite near top of hole. Granodiorite clasts are anglular and cobble sized within breccia matrix. Minor pyrite (disseminated) hosted within.			
								Py	3	DI
12.64	12.87	FT	42	70	NUL	1	Orange to grey clay gouge zone that represent fault gouge within weathered granodiorite.			
14.00	14.08	VN	37	70	NUL	1	quartz carbonate vein cutting weathered granodiorite. Vein hosts unidentifiable weathered sulphides (disseminated, minor).			
								Un	3	DI
16.00	16.03	VB	37	70	NUL	1	Carbonate vein			
25.40	28.00	VT	37	50	NUL	17	Orange weathered granodiorite with minor dull granodiorite periods. Hosts an array of narrow carbonate/quartz stringers and veinlets that all follow the same orientation set. One larger carbonate vein zone is present within, with minor stringers eminating from it (4cm). Limonitic alteration is present along all stringers.			
								Li	5	BN
31.00	31.11	FT	42	70	NUL	1	orange to beige clay altered fault gouge. Hosted within decaying argillic/oxidized/weathered granodirite.			
38.88	39.60	VN	37	40	NUL	7	1-2 mm, oxidized, pyrite bearing stringer veinlets in oxidized, weakly argillic granodiorite.			
42.67	43.46	VN	37	40	NUL	9	quartz stringer veins containing disseminated pyrite,trace sphalerite and galena within propylitic, potassic granodiorite. Some stringer veins appear to locally brecciate host grd.			
48.77	49.19	BX	34	-	NUL	1	moderately silicified, oxidized, breccia vein zone containting trace disseminated pyrite. An oxidized, carbonitic vein appears to brecciate clasts within breccia zone. Ankerite occurs as partiall infill in veins and as brecciated clasts in vein zone.			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
58.30	58.33	DY	37	80	NUL	1	2 cm light pink aplite dyke intrusion crosscutting a potassic altered grd section			
64.77	65.00	VN	37	40	NUL	4	2-4 mm, quartz vein containting trace hematite, pyrite in weakly propylitic, argillic grd

135.00	136.87	VN	37	50	NUL	7	1-4 mm, carbonate infilled quartz veins in grd			
139.70	140.00	VN	37	55	NUL	5	1-3mm, quartz stringer veins containing trace disseminate pyrite in altered grd			
141.15	141.25	VN	37	40	NUL	1	4 mm, calcite-quartz pyrite bearing vein in grd			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
144.55	144.78	VN	37	60	NUL	3	2-4 mm, quartz veins containting hematite and trace disseminated pyrite.			
144.74	144.85	VN	37	85	NUL	2	Banded rodhocrosite veins (1 cm) with minor quartz, carbonate and smokey quartz hosted in propylitic altered granodiorite. One vein have a centimeter offset from joint, and both are bare of mineralization.			
145.12	145.16	DY	37	60	NUL	1	6 mm, light pink, aplite dyke intrusion in grd			
145.17	145.24	VN	37	65	NUL	1	3cm banded carbonate vein at 65TAC with interstitial quartz and carbonate clast hosted in weak propylitic and phyllic altered granodiorite. Dissemnated pyrite in 8 cm of altered GRD at vein footwall.			
145.29	145.45	VN	37	20	NUL	1	4mm, quartz vein in potassic/argillic grd			
146.07	146.45	VN	37	40	NUL	1	silicified, carbonate infilled, vein breccia zone containting blebby pyrite. Quartz locally brecciates clasts within breccia zone			
146.70	147.24	DY	37	75	NUL	3	4mm-10 cm, pale pink, aplite dyke intrusion in argillic/propylitic granodiorite.			
147.24	147.55	VN	37	40	NUL	7	3-7 mm, pyrite bearing, quartz veins with minor calcite infill, locally brecciating host grd			
147.55	147.83	DY	37	45	NUL	3	4-5 mm, light pink, aplite dyke intrusions in argillic/potassic granodiorite			
156.00	157.40	VN	37	45	NUL	4	1-4mm, pyrite bearing, dark grey veins within propylitic, argillic altered grd.			
158.78	159.19	VN	37	40	NUL	3	4-6mm, pyrite bearing , carbonate infilled quartz veins in argillic/propylitic granodiorite			
161.22	162.34	VN	37	45	NUL	3	2-4 m, pyrite bearing, quartz veins in propylitic/argillic granodiorite.			
163.20	163.52	VB	37	40	NUL	4	1-5 mm, dark grey and clear quartz veinlets.			
168.15	138.45	VN	37	55	NUL	4	quartz veins, infilled and brecciated by bright pink, rhodocrosite and trace ankerite infill.			
169.25	169.35	DY	37	60	NUL	1	1 cm, pink, fine grained, aplite dyke intrusion in grd.			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
171.90	171.33	VN	37	35	NUL	6	2-5 mm, quartz vein zone infilled and brecciated by bright pink rhodocrosite. Rhodocrosite hosts sub-mm sphalerite and possibly galena. Blebby pyrite occurs within dark grey quartz vein. Rhodocrosite vein appears to brecciate host grd as well			
174.89	175.77	VN	37	40	NUL	5	2-4 mm, dark grey, pryrite bearing quartz veins in propylitic granodiorite			
177.48	178.29	VN	37	40	NUL	5	2-6 mm, quartz stringer veins containing trace disseminated pyrite.			
183.27	183.29	VT	37	53	NUL	1	1.5cm quartz-smokey quartz-carbonate veinlet cutting propyitic to weakly potassic altered granodiorite. Veinlet is barren of sulphide.			
184.17	184.20	ST		70	NUL	1	quartz-smokey quartz-carbonate stringer zone cutting propylitic altered granodiorite. Weak potassic alteration present. Trace disseminated pyrite found within.			
								Py	0.5	DI
184.90	194.91	ST		56	NUL	1	quartz carbonate stringer cutting granodiorite along GRD-QFP contact.			
192.40	193.50	ST		50	NUL	6	Strongly propylitic altered granodiorite hosting multiple quartz-smokey quartz stringers with minor carbonate. Stringers host disseminated pyrite locally. Stringers average 50TCA.			
								Py	1	DI
193.60	194.96	VN	37	85	NUL	1	Banded quartz-carbonate vein with lesser smokey quartz hosted within phyllic to propylitic altered granodiorite. Light pink rhodochrosite is present as bands that envelop quartz and as weakly brecciated clasts. Vein hosts disseminated pyrite.			
								Py	1	BN
								Py	1	DI
202.16	202.20	VN	37	85	NUL	1	quartz vein cutting phyllic altered granodiorite found along the footwall edge of a minor mm-scale clay shear (90TCA). Vein and associated softer gouge hosts disseminated pyrite within.			
								Py	2	DI

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
203.23	203.39	VB	37	80	NUL	1	16 cm wide quartz-smokey quartz-carbonate breccia vein hosted within phyllic altered granodiorite (hanging wall) and argillic/potassic altered footwall granodiorite. Black breccia is present within quartz veining. Ankerite and rhodochrosite is present along selvedges of quartz breccia veining, but no carbonate breccia clasts are present. Disseminated pyrite, honey brown sphalerite and asrsenopyrite is hosted throughout breccia.			
								Sp	2	DI
								Py	2	DI
								As	2	DI
205.24	206.20	ST		75	NUL	3	Quartz carbonate stringers cutting argillic to propylitic altered granodiorite. Stringers are up to 0.5cm wide. 3cm sinistral offset found along joint planes that crosscut stringers.			
214.14	214.15	VT	37	60	NUL	1	1cm quartz carbonate vein hosted within moderately propylitic altered granodiorite. Veinlet has a centre-line of carbonate with quartz along outer selvedges.			
214.97	215.00	VN	37	80	NUL	1	Banded quartz-smokey quartz-carbonate vein cutting propylitic to phyllic altered granodiorite. Vein has a mm-scale band of red hematite(?) and disseminated blebs of fine grained pyrite within.			
								Py	4	BL
								He	1	BN
216.38	216.69	VT	37	70	NUL	2	smokey quartz-quartz vein cutting propylitic altered granodiorite. Vein has bands of smokey quartz within.			
221.42	221.43	VT	37	68	NUL	1	smokey quartz-carbonate veinlet cutting unaltred to weakly propylitic/argillic altered granodiorite.			
221.94	221.97	VN	37	43	NUL	1	2.5cm intermixed and interstitially developed quartz carbonate vein. Minor net texture present within quartz-carbonate veining.			
223.96	224.10	VN	37	90	NUL	1	Banded quartz carbonate vein hosted in ewawkly propylitic altered granodiorite. Carbonate (ankerite) is found interstitially around quartz veining and takes on a colloform texture.			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
								Ak	5	BN
229.00	229.04	VT	37	60	NUL	1	quartz vein hosted within argillic/propylitic altered granodiorite.			
229.33	229.37	VB	37	70	NUL	1	Banded quartz-carbonate vein with weakly brecciated textures hosted within weakly argillic/propylitic altered granodiorite. Minor colloform/net textures are present.			
229.75	229.82	VN	37	70	NUL	1	quartz-smokey quartz-carbonate (ankerite) breccia vein. Weakly disseminated pyrite hosted within.			
								Py	2	DI
230.88	235.00	VT	37	65	NUL	15	Quartz carbonate stringers and veinlets, up to 1m wide cutting argillic/weakl potassic altered granodiorite. Stringers host locally disseminated pyrite. Black smokey bands present within. Vein angles range from 60 to 30, but generally trend 60 TCA. Local offsets along low angle, rehealed joints are present.			
								Py	5	DI
235.70	235.86	VT	37	60	NUL	2	Two 3cm quartz carbonate (narrow rhodochrosite bands?) veinlets cutting argillic altered granodiorite.			
238.98	239.00	VT	37	40	NUL	1	quartz carbonate veinlet hosted in argillic altered granodiorite.			
239.90	239.92	VT	37	90	NUL	1	banded quartz-smokey quartz-carbonate veinlet cutting propylitic/weakly argillic altered granodiorite. Veinlet hosts trace disseminated pyrte.			
								Py	0.1	DI
241.12	241.43	VB	37	80	NUL	2	Zone of two quartz-smokey quartz-carbonate breccia veins (12 cm, 6cm) hosted within propylitic/argillic altered granodiorite. Breccia veins host disseminated pyrite throughout.			
								Py	6	DI
243.39	243.43	VN	37	60	NUL	1	opaque, light grey chalcedony vein with brecciated fragments of altered granodiorite within. Minor ankerite stringer found along FW selvedge.			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
247.40	247.50	VN	37	35	NUL	1	1.5 cm, quartz vein comprised of dark grey quartz, clear quartz infilled by light red/pink clasts and calcite infill surrounding vein zone. Dark grey bands in vein locally brecciate host grd. Trace disseminatd pyrite is observed withindark grey bands in vein and within host grd.			
249.74	249.92	VN	37	60	NUL	3	5-8 mm, vuggy quartz-carbonate veinlets within argillic/potassic altered grd. Euhedral clear quartz crystals are observed within vein vugs			
250.60	250.07	VN	37	80	NUL	1	quartz, smokey quartz vein locally brecciating host propylitic granodiorite. Carbonates partially infill , brecciate quartz vein and host grd. Trace, disseminatd pyrite is observed within dark grey, smoky quartz veins.			
								Py	1	DI
252.07	252.14	VN	37	60	NUL	1	4 mm, quartz-carbonate vuggy vein containing fine grained euhedral calcite within vein vugs			
252.27	252.35	VN	37	70	NUL	2	Broken rock, gouge with fragmented rock and brecciated clast along 1 meter throughout the core axis. The contact between the gouge and the footwall of strongly propylitic altered granodiorite begins at 334.10m. Grey and black clay (smeared sulphides) gouge with quartz and carbonate and minor pyrite.			
258.05	258.14	VN	37	40	NUL	2	4-6 mm, quartz veinlets containing dark green, chlorite at venlet boundaries			
260.76	260.88	ST		60	NUL	1	3cm of dark grey stringers zone hosted in strong argilic/weak propylitic/potassic altered granodiorite proximal to hanging wall contact with a centimeter scale light green altered clay dyke. Smokey-quartz/chlorite/dark clay with minor carbonate stringers are millimeter width at 60TAC. No trace of mineralization.			
266.42	266.79	VN	37	70	NUL	4	Banded stringer and vein zone with minor colloform and vuggy textured quartz/carbonate. Hosted in argilic altered granodiorite. Quartz/smokey-quartz/carbonate (up to 4 cm) vein coupled with millimeter black stringers at 40TAC to 70TAC. Banded sphalerite and pyrite are along the border of the veinlets and form banded like stringers.

								Py	1	BN
284.07	284.20	DY	37	50	NUL	6	One centimeter redish-brown, aplite dyke cutting strong argilic altered granodiorite. Carbonate/quartz stringers (2 mm) crosscutting the dyke. One smokey-quartz stringer (3mm) has an offset from those carbonate/quartz stringers. No mineralization.			
286.44	286.86	VT	37	70	NUL	6	5mm, quartz/carbonate veinlets and smokey-quartz/carbonate stringers hosted in strong popylitic altered granodiorite. Veinlets have minor brecciated and banded veinlet texture (70TAC), they are offset by a joint, and crosscuts by stringers that are at opposite angle to the veinlets. Blebby pyrite associated with the stringers.			
								Py	1	BL
287.24	287.29	VT	37	75	NUL	1	7 mm, banded carbonate/smokey-quartz veinlet (75TAC) hosted in argilic/propylitic altered granodiorite. Colloform texture and minor milky-quartz. Disseminated pyrite with 'iron stain' along the smokey-quartz layer.			
								Py	1	DI
287.35	287.48	DY	37	50	NUL	2	5 mm, redish-brown aplite dykes cutting argilic/propylitic altered granodiorite. Discontinuity in the dykes and carbonate infilled joints crosscut the dyke. No mineralization.			
291.84	292.02	VN	37	80	NUL	7	3 cm, carbonate vein breccia and carbonate veinlets (80TAC) hosted in strong propylitic altered granodiorite. Medium-beige carbonate vein breccia with millimiter quartz clasts, banded with smokey-quartz vein and light-beige carbonate vein. Dark-beige carbonate veinlets with minor smokey-quartz. Colloform and vuggy texture locally. Trace of disseminated pyrite.			
								Py	0.5	DI

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
293.00	293.26	VN	37	65	NUL	8	2-10 mm, banded carbonate/quartz/smokey-quartz veinlets, and two gouge veins (10 mm) hosted in strong propylitic/argilic altered granodiorite. The veinlets have multiple offsets (scale-like). The gouge vein consists in 60% light-grey clay, 30% quartz clast (<1 mm), 10% host rock clast (<1-3mm) and minor smeared sulphides (black clay). Trace of disseminated pyrite.			
								Py	1	DI
295.00	295.27	DY	37	30	NUL	1	28 cm, redish-brown aplite dyke (30TAC) cutting through strong argilic altered granodiorite. Dyke is crosscut by low angle (30TCA) joints with clay gouge, and subparallel carbonate veinlets. Minor fragments of argillic altered granodiorite found within. No mineralization.			
297.85	298.19	VN	37	30	NUL	1	gouged, brecciated, weakly sheared, argillic-propylitic granodiorite interval. Dark grey, veinlets appear deformed and locally host trace disseminated pyrite. Dark grey, sheared bands appear to interstitiallysurround brecciated clasts.			
299.85	300.01	VN	37	80	NUL	2	2-4mm, dark grey, pyrite bearing , veinlets, locally infilled by carbonates and surrounding a thinner 1-2mm, quartz veinlet. Pyrite is locally hosted in dark grey, veinlets. Veinlet at 300m is locally offset a parallel Tca fracture.			
300.60	300.65	VN	37	75	NUL	1	4 mm, dark grey veinlet locally hosting trace pyrite and locally offset by a a 1 mm, carbonate infilled fracture at oblique angle from pyrite bearing vein.			
300.85	300.92	VN	37	40	NUL	2	2mm-1 cm,dark grey, veinlets locally hosting disseminated pyrite and locally brecciating host grd. Minor carbonate infill is locally observed in vein interval.			
301.71	301.80	VN	37	90	NUL	1	4 mm, quartz-carbonate vein , perpendicular to core axis in moderately argillic granodiorite. 1-3mm, dark grey, bands locally hosting trace disseminated pyrite are observed within interval			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
302.00	302.36	VN	37	60	NUL	2	4-6mm, quartz-carbonate veinlet in gouge brecciated, fractured infilled granodiorite interval. disseminated pyrite is locally hosted within dark grey, bands within vein zone.			
303.80	304.00	GO	34	30	NUL	1	gouge, brecciated seam in altered granodiorite. Dark grey, slightly deformed veinlets locally host trace disseminated pyrite			
305.40	305.50	VN	37	75	NUL	3	3mm-2 cm, quartz veinlets with rhodocrosite and calcite infilling and surrounding quartz veins. Fractures locally offset vein on interval. Disseminated pyrite is locally hosted in dark grey bands within vein zone. Sub-mm, sphalerite is observed in rhodocrosite ricih zones			
307.67	307.87	VN	37	80	NUL	2	4 cm banded quartz/carbonate vein (80TAC) crosscut by a 4cm gouge vein at opposite direction (50TAC) hosted in argilic/propylitic altered granodiorite. Quartz, rodhocrosite, ankerite and minor smokey-quartz banded with minor vuggy texture, and bare of mineralization. Clay gouge with host rock fragments and a 2 mm dark clay (smeared sulphides) at hanging wall of the vein. Trace of disseminated pyrite in the gouge vein.			
								Py	0.2	DI
308.31	308.37	VN	37	60	NUL	1	1-2 cm, carbonate/quartz vein (60TAC) hosted in propylitic altered granodiorite. Banded and locally colloform texture, with minor smokey-quartz and 'iron stain'. No mineralization.			
315.55	315.71	FT	42	70	NUL	1	16 cm fault gouge with quartz and feldspar clasts in a white clay matrix. Forms a sharp contact with silicifed quartz feldspars porphyry at the footwall and moderately argyllic altered quartz feldspar porphyry at the hanging wall.			
315.77	315.84	VT	37	35	NUL	1	7 cm banded smokey quartz carbonate veinlets hosted in moderately propyllitic aterared granodiorite, strongly chloritized along vein contact. Veinlets are slightly offset along a joint set at 5 TAC. Minor pyrite mineralization along quartz veinlets.

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
323.56	323.74	VT	37	60	NUL	1	10 cm, banded brecciated smokey-quartz veinlet and milky-quartz veinlet with minor carbonate stringers section hosted in stongly propylitic/moderate potassic altered granodiorite. Bare of sulphide.			
323.84	323.95	VT	37	25	NUL	1	1 cm, carbonate breccia-veinlet with smokey-quartz clast and vuggy texture hosted in strongly propylitic altered granodiorite with weak potassic overprinting. Trace of disseminated pyrite at the edge of the veinlet.			
								Py	0.1	DI
330.68	330.97	VT	37	65	NUL	4	3-5 mm, banded carbonate and quartz (greyish) veinlet of two distinct zone hosted in strongly argilic/propylitic altered granodiorite. The carbonate veinlets are slightly brecciated and show trace of vuggy texture. The quartz veinlets cut those of carbonate in some places. Trace of disseminated pyrite in the host rock.			
								Py	0.5	DI
331.58	331.85	FT	42	40	NUL	1	20 cm section of gouge in contact at 30TAC with 8cm brecciated quartz vein at hanging wall and brecciated/weakly propylitic altered porphyric dyke at footwall. 50-70% of host rock fragment, 50-30% banded clay from light grey to black. No mineralization.			
333.15	334.10	FT	42	5	NUL	1	Broken rock, gouge with fragmented rock and brecciated clast along 1 meter throughout the core axis. The contact between the gouge and the footwall of strongly propylitic altered granodiorite begins at 334.10m. Grey and black clay (smeared sulphides) gouge with quartz and carbonate and minor pyrite.			
334.50	334.73	ST		65	NUL	3	2mm to one centimeter of brecciated quartz-ankerite stringers with minor smokey-quartz hosted in strongly propylitic altered granodiorite. The stringers are offset from a joint at 5TAC. Disseminated pyrite throughout, and rimming pyrite around some chloritized hornblend and quartz grains.			
								Py	1	DI

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
338.21	338.27	VT	37	75	NUL	1	1 cm, quartz-carbonate veinlet hosted in argillic/weakly propyllic altered granodiorite. The veinlet is banded with couple of mineralized smokey-quartz carbonate stringers. Disseminated pyrite associated with stringers and the footwall of the host rock.			
								Py	1	DI
340.13	340.27	VT	37	75	NUL	2	1 cm, banded smokey-quartz carbonate veinlet hosted in strong propyllic/weak phyllic altered granodiorite. One of the veinlets has a millimeter offset from a joint. Smokey quartz at the edge of the veinlet walls and ankerite in the centre with minor interstitial quartz. Disseminated pyrite associated with smokey-quartz, throughout the footwall of host rock.			
								Py	2	DI
342.46	342.76	VN	37	50	NUL	3	6 cm smokey quartz vein with minor carbonate, adjacent to a 6cm carbonate gauge at 50 TAC. Hosted in a strongly argyllic/weakly propyllitic altered granodiorite. 3 smokey quartz veinlets (3mm-15mm) in the hanging wall of the host rock. Trace of blebby pyrite (<1%) associated to the smokey quartz.			
								Py	0.5	BL
344.90	344.93	VN	37	60	NUL	1	quartz vein with partiall rhodocrosite and calcite infill. Vein hosts pyrite, and trace galena and sphalerite are observed in quartz and within rhodocrosite.			
348.57	348.58	VN	37	60	NUL	1	3mm, quartz-carbonate veinletwithin unaltered granodiorite. A sall 2 cm, propylitic alteration halo is observed within veinlet .			
350.80	350.85	VN	37	40	NUL	1	2 cm, quartz-carbonate vein within weakly potassic, propylitic granodiorite interval vein appears to crosscut through light gree, orange, fine grained intrusion within granodiorite interval.			
353.97	353.99	DY	37	40	NUL	2	3 mm, light pink aplite dyke intrusion in unaltered granodiorite			
358.00	358.02	VN	37	60	NUL	1	2mm, dark grey, fine grained, vein locally hosting trace, dissemianted pyrite in propylitic altered halo.			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
360.36	360.40	VN	37	60	NUL	1	quartz-carbonate , semi chaotic, vein locally brecciating host grd. Ankerite and calcite appear toinfill and brecciate an exsisting quartz vein. Quartz-carbonate breccia crosscuts through 2-3mm, stringer veinlets locally hosting, trace disseminated pyrite			
360.75	361.00	VN	37	55	NUL	1	3 cm, dark purple, polymetallic vein in gouged, brecciated granodiorite interval. Vein locally hosts trace galena, pyrite, sphalerite and trace sub mm arseno pyrite Clear quartz and calcite surround vein. Shear brecciation zone is present at vein contact where 1-2mm, dark grey fine grained, deformed veinlets locally host disseminated pyrite.			
374.96	375.00	VN	37	80	NUL	4	quartz vein partially infilled by calcite and ankerite. Pyrite is hosted in dark grey, fine grained bands within vein zone. Ankerite appears to infill quartz and calcite infilled veinlet			
380.20	380.33	VN	37	30	NUL	1	1 cm, polymetallic quartz vein containing blebby pyrite, blebby galena, sphalerite and trace sub-mm arseno pyrite. Most minerals are hosted within dark purplish , quartz vein. Darker quartz vein appears to infill an already existing clear quartz vein. Pyrite is locally hosted within dark grey, 1-2mm, bands in grd.			
382.00	382.05	VN	37	30	NUL	1	4 mm, quartz-carbonate veinlets in weakly argillic, potassic granodiorite (no significant mineralization observed in veinlet)			
382.72	382.78	VN	37	30	NUL	1	4mm, quartz-carbonate veinlet in trace potassic granodiorite			
384.71	384.75	VN	37	60	NUL	2	2-3 mm, quartz-carbonate slightly deformed veinlets in propylitic altered granodiorite			
387.06	387.10	VN	37	50	NUL	1	3 cm, quartz-carbonate vein. Ankerite and calcite locally infill and brecciate quartz vein. Trace sub-mm, sphalerite is present within quartz vein. Trace, disseminated pyrite is locally hosted within 1-2mm,dark grey bands within vein section			
391.63	391.71	VT	37	50	NUL	2	Two narrow euhedral quartz veins that are vuggy (dissolution). Veins cut propylitic altered granodiorite.

21.00	23.80	2.80	GRD	GRDA	MG	moderate to strongly argillic altered granodioirte with a weak propylitic overprint.
23.80	25.47	1.67	GRD	GRDF	MG	heavily blaeached and oidized, fracuted, strongly clay altered granodioirte with pervasive oxidative staining
25.47	25.96	0.49	BXA	GRDF	MG	brecciated, pyrite bearing faulted granodiorite, with a stockwork of fractures throughout, and weak disseminated pyrite throughout.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
25.96	26.55	0.59	GRD	GRDF	MG	gouged, heavily clay altered and bleached granodiorite
26.55	28.12	1.57	GRD	GRDA	MG	moderately propylitic and argillically altered granodiorite, with one40 TCA quartz carbonate veinlet 1 cm wide with no sulfide
28.12	29.57	1.45	GRD	GRDF	MG	faulted, fractured, moderate to strongly clay altered granodioirte with weak patchy silicification
29.57	30.48	0.91	GRD	GRDA	MG	moderately propylitic altered granodioirte with patchy oxidative staining and weak bleaching, with sparse 80 TCA trending stringer veinelts barren of sulfides. Lower 40 cm is fractured and clay altered, possibly related to faulting
30.48	31.30	0.82	GRD	GRDF	MG	faulted, silicified, oxidized, and bleached granodiorite with strong clay alteration, grading into gouge in the last 40 cm
31.30	31.65	0.35	GRD	FLTM	MG	mineralized fualt gouge within a faulted interval of granodiorite. This interval contains a 3 cm wide pyrite bearing quartz vein 70 TCA, and pyrite thorughout gouge.
31.65	33.12	1.47	GRD	GRDA	MG	fracutred, patchily oxidized and weakly propylitic and argilicaly altered granodioirte
33.12	35.55	2.43	GRD	GRDA	MG	patchy, moderatly propylitic altered granodiorite with propylitic alteration envelopes extending 10 cm on either side of small pyrite bearing quartz stringers; typically trending 70 TCA
35.55	36.10	0.55	GRD	GRDA	MG	strongly argillic altered granodioirte, patchy white to light grey
36.10	36.35	0.25	GRD	GRDF	MG	silicified interval of faulted granodiorite with a sharp upper and lower contact trending 70 TCA. Contains gouged material and disseminated pyrite throguhot
36.35	38.26	1.91	GRD	GRDF	MG	rubbly to gravelly, moderately argillic altered granodiorite with small fragments within a larger rubbly interval. Possibly related to faulting
38.26	38.90	0.64	GRD	GRD	MG	unaltered granodiorite
38.90	40.70	1.80	GRD	GRDA	MG	patchily propylitically altered intervals within a broader interval of unaltered granodioirte. Two small 80 TCA trending quartz carbonate veins 2 cm wide, with propylitic alteration haloes extending 5 cm on either side within this interval.
40.70	42.00	1.30	GRD	GRDA	MG	strongly propylitic altered granodiorite with patchy oxidative staining on fracture surfaces. Heavily fractured interval with weak pyrite bearing stringers trending 80 TCA
42.00	45.15	3.15	GRD	GRDA	MG	patchy, weakly propylitic altered granodiorite with patchy weak zones of argillic alteration. Zone sof alteration coincide with small pyrite baring quartz veinlets trending 80 TCA. One small veinlet contains trace sphalerite.
45.15	47.40	2.25	GRD	GRDA	MG	weak to moderate argillic altered granoioirte with weak propylitic alteration. Two 80 TCA pyrite bearing veinlets ~2 cm wide within interval. Patchy oxdiation along fracture surfaces throughout interval
47.40	48.90	1.50	GRD	GRDF	MG	heavily oxidized and clay altered, weakly gouged, bleached and strongly clay altered granodioirte. Likely related to faulting; this interval contains many fragmental pieces of granodiorite and is oxidized.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
48.90	51.00	2.10	GRD	GRDM	MG	moderately argillic and propyliitic altered granodioirte with patchy blebby pyrite alteration along low angle quartz veinlets trending 40 TCA, and along two small pyrte bearing stringers trending 60 TCA.
51.00	53.00	2.00	GRD	GRDA	MG	moderatley propylitic and weakly silicified granodiorite with trace pyrite bearig stringers trening 70 TCA
53.00	54.00	1.00	GRD	GRDM	MG	strongly propylitic altered granodioirte with 5 pyrite beaginr quartz stringers trending 70 TCA
54.00	55.40	1.40	GRD	GRDA	MG	moderately propylitic altered granodiorite with two pryite bearing quartz stringers trending 70 TCA
55.40	57.00	1.60	GRD	GRDM	MG	strongly silicified and propylitic altered granodiorite with set of 14 pyrite bearing quartz stringer veinlets from 1-3 m in size; generally trending 70 TCA, with 3 trending 50 TCA.
57.00	59.00	2.00	GRD	GRD	MG	unaltered granodioirte with one clay altered interval 5 cm wide trending30 TCA (possible fault?)
59.00	61.15	2.15	GRD	GRDA	MG	moerately propylitic altered granodiorite with weak pyrite bearing stringers, trending 70 TCA.
61.15	63.52	2.37	GRD	GRDA	MG	moderately propylitic and argillic altered granodioirte with weak clay alteration along fractures, with weak pyrite mineralization within more densely fractured intervals.
63.52	63.75	0.23	GRD	FLTM	MG	heavily clay altered, gouged granodiorite preceding upper contact with qfp dyke. Blebby pyrite thorughout
63.75	64.12	0.37	QFP	DYK	MG	chloritized and clay alterd qfp dyke with sharp uppar and lower contact trending 70 TCA.
64.12	65.95	1.83	GRD	FLTM	MG	heavily clay altered, very soft & weak, light greenish grey granodiorite. Intense argillic alteration and weak propylitic alteration. Four semi-rhythmic 30 TCA black seams run throughout clay altered interval, likely related to sulfides (fine-grained pyrite?_) along the clay altered interval
65.95	70.20	4.25	GRD	GRDM	MG	moderately argillic and propylitic altered granodiorite with series of pyrite bearing quartz veinlets develop throuhout interval, trending between 30-70 TCA. Minior sphalerite is associated with a few of the veinlets, and there is a lot of sporadic hairline fractures running throughout interval, likely related to faulting.
70.20	70.34	0.14	GRD	FLTM	MG	gouged, light greyish green granodiorite with intense clay alteration, weak argillic alteration, and weak propylitic alteration
70.34	72.00	1.66	GRD	GRDM	MG	moerately propylitic altered and weakly argillic altered granodiorite with 30 TCA quartz veinlets with trace pyrite
72.00	74.25	2.25	GRD	GRDA	MG	moderately propylitic altered granodioirite overpinting weakargillic lteration. Medium greenish grey to whitish grey,
74.25	77.00	2.75	GRD	GRDM	MG	moderately propylitic and weakly argillic altered granodioirte with two sets of pyrite bearing veinlets (one set trends ~10-15 TCA; other set trends ~40 TCA) developed throughout interval, typically coinciding with more intense propylitic alteration. Low angle fractures have clay alteration along their seams, likely related to faulting.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
77.00	77.60	0.60	GRD	FLTM	MG	faulted, fractured granodiorite with clay alteration, fractures trend 10-20 TCA and are likely a source of the intense ffragmenting of granodioirte in this interval.
77.60	79.25	1.65	GRD	GRDM	MG	strongly propylitic and weakly argillic altered granodioirte with three 30 TCA pyrite baring quartz veinles 5 mm wide. Weak disseminated pyrite in groundmass
79.25	80.50	1.25	GRD	GRDM	MG	strongly silicified, moderately argillic altered granodiorite with strong pervasive silicification throughout. Not a true quartz vein, but very strongly silicified. Siliceous granodiorite hosts patchy blebby pyrite and strginer zones of pyrite bearing quartz veinlets sporadically dispersed throughout. 80.1 to 80.13 is a carboane vein trending 80TCA. Pyrite veinlets trend 40 TCA and 80 TCA.
80.50	80.95	0.45	BXA	GRDM	MG	silicified pyritic granodiorite breccia with a 5 cm fragment of QFP dyke within. Breccia contains class of pyrite and granodiorite; subangular, with pachy pyrite within a black fault matrix. Possibly trace fine-graine arsenopyrite - difficult to properly ID.
80.95	84.15	3.20	QFP	DYK	MG	light greenish grey, weakly clay feldspar porphyry dyke, with weak chloritization of groundmass and clay alteration of feldspar grains. Sharp upper and lower contcat trending 70 TCA..
84.15	85.08	0.93	GRD	GRDM	MG	strongly silicified with dissemianted blebby pyrite, moderately propylitic altered grandiorite with two 80 TCA pyrite bearing veinlets 1 cm wide.
85.08	85.57	0.49	BXA	GRDM	MG	brecciated, veined, disseminated pyrite bearing, banded sooty grey to medium grey to white, quartz carbonate vein, with disseminated patchy pyrite and lesser patchy sphalerite and galena. Upper 30 cm of vein is brecciated, and lower 20 cm of vein is banded and semi-competent (i.e weakly brecciated). Cemented together by a fine-grained black material.
85.57	86.90	1.33	GRD	GRDM	MG	patchy moderate argillic and propylitically altered granodiorite with disseminated pyrite throughout.
86.90	87.10	0.20	APL	DYK	FG	set of three small finegrained aplite dykes; pinkish brown, trending 80 TCA
87.10	91.90	4.80	GRD	GRDM	MG	moderately propylitic and argillic altered granodioirte with series of quartz veinlets trending 70 TCA that are 1-2 cm wide and contain pyrite. One vein has trace sphalerite rimming pyrite.
91.90	93.45	1.55	GRD	GRDA	MG	moderately propylitic altered granodioirite with weak argillic alteration, no visible sulfie stringers
93.45	93.87	0.42	GRD	GRDM	MG	disseminated sulfide stringers within propylitic altered granodiortie
93.87	95.27	1.40	GRD	GRDA	MG	weakly argillic altered granodiorite with weak propylitic alteraion
95.27	96.13	0.86	GRD	GRDM	MG	moderately propyltiic altered granodiorite with two 70 TCA pyrite bearing quartz veinlets
96.13	97.00	0.87	GRD	GRDA	MG	weakly propylitic altered granodioirte
97.00	100.00	3.00	GRD	GRDM	MG	moderately propylitically altered granodiorite with three 70 TCA pyrite stringers

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
44.70	57.10	12.40	GRD	MG	Extensive pyrite stringer development in this entire broad interval. Granodiorite varies between weak to moderate propylitic and weak to moderate argillic alteration. Weak oxidative staining around fractures persists until 54 m depth. Alternating intervals of argillic and propylitic alteration are semi-rhythmic throughout entire interval. Weak pyrite bearing stringer veinlets are developed pervasively, with no discrete zone of higher density of veining. Semi-rhythmically spacings of pyrite bearing quartz stringers that range in size from 1-4 mm wide, trending between 30-50 TCA are present for this entire section, and there is less that 1 m between each veinlet.

44.70	57.10	12.40	GRD	MG	Extensive pyrite stringer development in this entire broad interval. Granodiorite varies between weak to moderate propylitic and weak to moderate argillic alteration. Weak oxidative staining around fractures persists until 54 m depth. Alternating intervals of argillic and propylitic alteration are semi-rhythmic throughout entire interval. Weak pyrite bearing stringer veinlets are developed pervasively, with no discrete zone of higher density of veining. Semi-rhythmically spacings of pyrite bearing quartz stringers that range in size from 1-4 mm wide, trending between 30-50 TCA are present for this entire section, and there is less that 1 m between each veinlet.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
7.46	10.44	2.98	GRD	MG	locally variable,weakly oxidized, clay altered, moderately argillic, weakly potassic granodiorite interval. clay alteration and oxidiation occurs interstitially within grd host. Trace, 1-4mm, quartz-carbonate veinlets (80 degrees TCA) and trace 1-2 mm, oxidized veinlets at 40 derees TCA are locally observed throughout interval. Light brown, clay altered, fine grained clasts inclusion in granodiorite interval is observed at 7.65m and is localy crosscut by hematite-carbonate infilled fractures.							
						MD	PK		CLY	2I

49.39	53.63	4.24	GRD	GRD	MG	black-white, unaltered granodiorite interval containing trace, 1-3mm, carbonate veinlets(60 degrees Tca)

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
53.63	54.48	0.85	GRD	GRD	MG	moderately argillic, trace potassic, propylitic granodiorite containing 4mm-1 cm, light pink aplite dyke intrusions (20-80 degrees TCA; steeper dyke intrusions locally crosscut through low angled ones). Trace 3mm-2 cm, quartz carbonate veinlets are observed on interval, thinner veinlets locally crosscut and offset aplite dyke intrusions. Rubbly zone is observed from 54.20m. Trace pyrite blebs, locally hosted in vein zone at 54 m. (vein is 80 degrees TCA). Trace pyrite, is also locallyhosted in 1-2mm veinlets that locally crosscut and offset aplite dyke intrusions.
54.48	56.00	1.52	GRD	GRD	MG	black-white , unaltered granodiorite interval containting 3-4mm, 25 degrees TCA ,light pink, aplite dyke intrusions.
56.00	60.15	4.15	GRD	GRD	MG	locally fractured, trace potassic, relatively unaltered granodiorite interval containing trace 1-4mm, 60 degrees TCA, quartz-carbonate veinlets.
60.15	62.38	2.23	GRD	GRD	MG	trace potassic granodiorite with intermittent zone of weakly argillic, potassic, oxidized, clay altered granodiorite. Local rubbly, fracture zones occur throughout interval. Trace 1-4mm,quartz carbonate vienlets (60 degrees TCA) sometimes locally hosting trace pyrite are present in altered granodiorite sections.
62.38	65.77	3.39	GRD	GRD	MG	trace potassic, propylitic, relatively unaltered granodiorite interval
65.77	66.68	0.91	GRD	GRD	MG	pervasively oxidized, clay altered, moderately argillic, weakly potassic and tracepropylitic granodiorite interval. Trace 1-3 mm, quartz-carbonate veinlets occur sporadically throughout interval.
66.68	66.85	0.17	VEN	GRD	MG	quartz-carbonate vein breccia zone in argillic, oxidized granodiorite. Carbonate infilling veinlets locally brecciate host grd and microbrecciate veins within interval. Semi chaotic,discontinous veinlets are also observed in vein interval. 1-2mm, dark red, hematite bands locally crosscut bycarbonate infill are observed as well. Trace, disseminated pyrite is locally hosted in dark bands in vein zone. Trace sub-mm, sphalerite and possibly galena occur within dark grey, (30 degrees TCA) veinlet which is not brecciated or crosscut by carbonates (later stage vein(?)).
66.85	67.18	0.33	GRD	GRD	MG	pervasively oxidized, clay altered, argillic-weak potassic granodiorite interval. 1mm, carbonate infilled fractures parallel TCA are observed on interval
67.18	68.00	0.82	GRD	GRD	MG	strongly potassic, granodiorite interval within intermittent zones of trace argillic alteration.
68.00	68.22	0.22	VEN	GRD	MG	semi chaotic, dark grey, smoky quartz-carbonate veining (relatively shallow 20 degrees TCA) vein within strongly potassic granodiorite interval. Specular hematite, blebby pyrite and tabular, magnetite crystals are locally observed within vein (i.e. 28.22m). Calcite inclusion within hematite-pyrite quartz vein is observed in quartz vein. (silica flooding into strongly potassic granodiorite(?). Quartz vein locally brecciates host granodiorite as well.
68.22	69.70	1.48	GRD	GRD	MG	moderate potassic granodiorite interval with intermittent zones of weak argillic alteration.
69.70	72.50	2.80	GRD	GRD	MG	black-white , medium grained, unaltered granodiorite interval with local zones of weak potassic alteration and containin trace 1-3mm, carbonate veinlets (40 degrees Tca).

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
72.50	74.68	2.18	GRD	GRDA	MG	Moderately argillic trace potasic granodiorite interval with local zones of light brown, oxidation. Dark reddish, hematite oxidation is locally observed along fractures/joint surfaces.
74.68	76.38	1.70	GRD	GRD	MG	fractured interval of relatively unaltered granodiorite . Light brown,yellow clay alteration if observed along fracture/join surfaces.
76.38	78.78	2.40	GRD	GRD	MG	trace potassic, relatively unaltered granodiorite with trace 1-2 , quartz-carbonate veinlets (60 degrees TCA0.
78.78	79.25	0.47	GRD	GRDA	MG	clay altered, oxidized, moderately argilic granodiorite proximal to light pink, aplite sheeted dyke intrusion.
79.25	80.60	1.35	APL	GRDA	MG	light pink, fine grained, aplite dyke intrusion containing a succession of 30 degrees TCA, 2-3 cm, aplite dyke intrusions (sheeted dyke interval(?)). Blebby pyrite is locally hosted within dark , grey inclusions in aplite dyke section and light beige, quartz-carbonte veins (60 degrees) locally brecciate intrusion at 79.90m. Light beige veins appear to partially replace, white calcite veinlets within interval (80 degrees TCA). Light beige, vein breccia locally offsets 102mm, white calcite veinlets .
80.60	83.34	2.74	GRD	GRDA	MG	clay altered, hematite altered, moderately argillic, weakly potassic granodiroite interval. Reddish, hematite alteration is more prominent in lower interval section at 83m.
83.34	84.47	1.13	GRD	GRDA	MG	strongly argillic, trace potassic, propylitic granodioriote interval with trace 1-2 mm, carbonate veinlets (70 degrees TCA). Trace clay alteration is locally observed on interval
84.47	84.83	0.36	VEN	GRDA	MG	quartz-carbonate breccia vein zone within argillic altered granodiorite locally hosting blebby pyrite, trace sub-mm galena, sphalerite and possibly arsenopyrite. Breccia zone is comprised of sub-angular grd clasts with partially infilled or containing calcite veinlet fragments (reworked vein breccia(?)). Beige, ankerite appears to brecciate grd clasts, calcite , light pink rhodocrosite and quartz clasts throughout vein zone. Sub-mm galena and sphalerite is locally hosted within light pink, rhodocrosite sections. Pyrite blebs alsooccur within brecciated grd clasts. 3-5 mm, quartz veinlets (60 degrees TCA) are observed near vein breccia zone and locally host blebby pyrite within dark grey smoky quartz veinlets partially infilled by calcite and ankerite
84.83	85.65	0.82	GRD	GRDA	MG	strongly argillic, trace potassic/propylitic granodiorite with trace 1mm-1 cm, quartz-carbonate veinlets (40-80 degrees TCA. Trace,pyrite islocally hosted within dark grey, fine grained bands within some quartz-carbonate veinlets.
85.65	86.65	1.00	GRD	GRDA	MG	clay altered, weakly oxidized, argilic granodiorite interval with local light brown, soft gouged seams.
86.65	88.00	1.35	FLR	FLT	MG	light brown, clay altered, weakly oxidized, moderately argillic, fractured granodiorite interval . (start of fault hanging wall(?)
88.00	91.63	3.63	FLR	FLT	MG	fractured, soft, weakly sheared , locally rubbly trace potassic, trace propylitic granodiorite interval. (shear fabric ~ 25 degrees TCA).

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
91.63	91.71	0.08	GRD	FLT	MG	weakly propylitic, clay altered , locally fractured granodiorite interval containing trace 1-3mm, black tourmaline bands which are locally offset by calcite infilled fractures
91.71	93.21	1.50	FLT	FLT	MG	faulted interval composed of reworked, reheatted (due to fault) granodiorite fragments and locally hosting disseminated,blebby pyrite within brecciated zones. Rock is soft, gouged brecciated and contains vuggy, quartz-carbonate veinlets which locally brecciate faulted interval. Fault gouge at 92 meters occurs at steep angle to core axis (80), gouge brecciated seam at the contact with fault and footwall is 25 degrees TCA. Pervasive clay alteration is locally observed throughout faulted interval Pyrite is also hosted wtihin dark grey, fine grained veinlet fragments that are locally crosscut by clay-carbonate infilled fractures. Discontinous 2-3 mm, tourmaline bands and sub-mm tourmaline crystals are observed at 93 m.
93.21	94.41	1.20	GRD	FLT	MG	trace potassic,trace propylitic granodiorite with light brown/yellow oxidation-clay alteration along fractures/joints
94.41	96.50	2.09	FLR	FLT	MG	clay altered,limonite bearing, fractured, rubbly granodiorite interval exhibiting weakly sheared fabric in competent granodiorite zones. (fault footwall(?)
96.50	97.23	0.73	FLR	FLT	MG	sheared and rubbly, unoxidized , weakly argillic trace potassic granodiorite interval. (shear fabric ~ 20 degrees).
97.23	101.26	4.03	GRD	GRDA	MG	trace potassic, propylitic granodiorite interval with local zones of inreased propylitic alteration. Trae 1-3mm, quartz-carbonate veinlets (35 degrees TCA) are observed from 99-99.40m. Locally fracture zones are also observed throughout interval.
101.26	103.16	1.90	GRD	GRDA	MG	Moderately argillic, weakly potassic, trace propylitic, hematite altered granodiorite interval with locally fractured, argillic, propylitic zones. hematite oxidation on surfaces giving granodiorite a darker red tone. Trace 1-2 m, carbonate veinlets (40 degrees TCA) occur locally on interval.
103.16	105.00	1.84	GRD	GRDA	MG	strongly propylitic granodiorite interval locally silica flooded, expressed as mm-cm, increased quartz inclusions and 1-3 cm, 40 degrees TCA, quartz veinlets. Darker grey, carbonitic veinlets locally brecciate host grd and quartz flooded areas.
105.00	106.20	1.20	GRD	GRDA	MG	fractured, rubbly, gouged brecciated , silica flooded , strongly propylitic granodiorite. (Faulted interval(?)).
106.20	108.26	2.06	GRD	GRDA	MG	silica flooded, strongly propylitic granodiorite with local 1-3 mm , gouged brecciated seams (40 degrees TCA)
108.26	108.81	0.55	GRD	GRDA	MG	Rubbly, gouge, strongly propylitic granodiorite interval.
108.81	109.27	0.46	GRD	GRDA	MG	stronglly propylitic, silica flooded, granodiorite with trace 1-2 mm, carboante veinlets and carbonate fracture infill.
109.27	109.72	0.45	GRD	GRDA	MG	moderate argillic, weakly propylitic granodiorite interval containing 1-3 mm, black, fine grained magnetite inclusions and trace 1-4 mm, quartz-carbonate vein at 20 degrees to core axis and locally host trace disseminated pyrite. Veinlets ppear to locally microbrecciate host grd and magnetite appears to interstitially infill and surround feldspathic clasts in grd.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
109.72	110.72	1.00	GRD	GRDA	MG	moderate argillic, weakly potassic-propylitic granodiorite interval containing 1-2 mm, light grey, gouged seams (40 degrees TCA at 110.05m. Trace 1-2 mm, carbonate veinlets @ 35 degrees are also observed.
110.72	111.47	0.75	GRD	GRDA	MG	Gouged, brecciated interval of moderate argillic, trace potassic-propylitic granodiorite. Trace, disseminated pyrite is locally hosted within grey, fine grained, gouged bands on interval. competent sections of rock exhibit sheared fabric (20 degrees TCA).
111.47	112.78	1.31	GRD	GRDA	MG	fractured, rubbly interval of moderately argillic, trace potassic, propylitic granodiorite. Light brown-yellowsih clay alteration is observed along fracture surfaces.
112.78	114.74	1.96	GRD	GRDA	MG	moderately argillic with moderate propylitic overprint. Light green, brownish, fine grained, intrusion if observed @ 114.60m.
114.74	115.72	0.98	FLR	GRDA	MG	gouged brecciated , rubbly and locally fractured, moderately argillic, trace propylitic granodiorite interval. Light-meidum brown, clay alteration and oxidation is observed along fractures/joint surfaces.
115.72	116.00	0.28	VEN	GRDA	MG	light brown-grey, clay altered, oxidized, rubbly , vein zone in moderately argillic granodiorite . Trace , disseminated pyrite is locally hosted in grey , fine grained material within gouged seams.
116.00	116.70	0.70	GRD	GRDA	MG	Moderately argillic, trace potassic-propylitic granodiorite interval. Trace, pyrite is locally hosted in 40 degrees TCA , 1-2 mm, quartz-carbonate veinlets. Slickenlines are locally observed along join surfaces .
116.70	118.41	1.71	GRD	GRD	MG	trace potassic granodiorite interval exhibiting weak , hematite oxidation in grd. Sub-mm, 60 degrees TCA, quartz-carbonate veinlets occur sporadically throughout interval. 2-3 mm, hematite infilled carbonate veinlet (80 degrees TCA) locally crosscut low angle (60o) quartz-carbonate veinlets on interval.
118.41	122.83	4.42	GRD	GRD	MG	relatively unaltered granodiorite interval displaying moderate , pervasive hematite oxidation. Trace, 1-4 mm, quartz-carbonate veinlets (60 degrees TCA) locally hosting minor pyrite blebs are observed throughout interval. 1-3 mm, hematite infilled, low angle (40 degrees TCA) quartz carbonate veinlets are also observed on interval
122.83	124.00	1.17	GRD	GRD	MG	relatively unaltered granodiorite interval exhibiting pervasive hematite oxidation. Interval is more fractured and contains increased, black, fine grained, magnetite inclusions than previous interval.
124.00	125.10	1.10	GRD	GRD	MG	relatively unaltered granodiorite with moderate , pervasive hematite oxidation containing trace 4-6 mm, dark grey, 20 degrees TCA, quartz-carbonate veinlets. Dark veinlets, locally host fine grained, magnetite , trace pyrite and are locally offset by 3-5 mm, 60 degrees TCA quartz-carbonate veinlets.
125.10	127.92	2.82	GRD	GRD	MG	trace potassic, trace propylitic granodiorite exhibiting weak hematite oxidation and containing 1-5 mmm, semi chaotic, quartz-carbonate veinlets (30-60 degrees TCA) which locally brecciate host grd. Trace disseminated pyrite locally hosted in some veinlets is observed.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
127.92	132.11	4.19	GRD	GRD	MG	trace potassic, trace propylitic granoiorite interval with weak to moderate hematite oxidation and locally increased, dark grey, fine grained magnetite inclusions . Tabular, euhedral , magnetite crystals and blebby pyrite are locally observed on interval. (i.e. 129-130m). Trace 1-3 mm, 60 degrees TCA, quartz-carbonate veinlets and discontinous 1-2 m carbonate infilled vienlets are locally observed throughout interval.
132.11	133.00	0.89	GRD	GRD	MG	weakly potassic, trace proplylitc granodiorite with weak hematite oxidation.2-8mm, quartz-carbonate veinlets (60-80 degrees TCA) sometimes locally hosting trace pyrite occur throughout interval. 4-7 mm, light pink aplite dyke intrusions(20 degrees tca) are loally crosscut and offset by fractures and quartz-carbonate veinlets (i.e. 132.40m).
133.00	135.26	2.26	GRD	GRD	MG	weakly potassic granodiorite interval with intermittent zones of moderate propylitic alteration. 2-8 mm, slightly deformed (weakly sheared), quartz-carbonate veinlets (30 degrees TCA) are locally observed throughout interval. Light grey, gouged seam (60 degrees TCA) is observed at 134.45m. Trace pyrite, is locally hosted in dark grey bands within quartz-carbonate zones. Darker quartz-carbonate veinlets are locally offset by 2-3 mm, carbonate veinlets. Hematite oxidation is locally observed throughout unit as well
135.26	138.91	3.65	GRD	GRD	MG	trace potassic, trace propylitic granodiorite interval with weak hematite oxidation and containting trace 2-8 mm, quartz-carbonate veinlets (60 degrees TCA).
138.91	140.40	1.49	GRD	GRD	MG	trace potassic, propylitic granodiorite interval containing 5mm-12 cm, light pink,fine grained aplite dyke intrusions (60 degrees TCA). Weak, hematite staining is locally observed throughout interval. 8mm, quartz-carbonate vein (45 degrees TCA), containting red hamatite infill and specular hematite is locally observed at 139.50m.
140.40	141.72	1.32	GRD	GRD	MG	white-black, unaltered granodiorite with local zones of trace potassic, propylitic alteration (very minor). Trace, red, hematite staining is observed along fractures/joint surfaces.
141.72	143.75	2.03	GRD	GRD	MG	weakly potassic,trace propylitic granodiorite with weak to moderate hematite alteration. 1-2mm, hematite infilled veinlets (80 degrees TCA) occur sporadically on interval.
143.75	148.61	4.86	GRD	GRD	MG	interval comprised of unaltered granodiorite with local zones of weakly potassic /propylitic alteration and locally variable pervasive hematite alteration. Trace, sub-mm,hematite-magnetite veinlets perpendicular to core axis are observed in pervasively hematite granodiorite setions. Sub-mm, calcite infilled fractures are also present on interval
148.61	149.66	1.05	GRD	GRD	MG	weakly potassic, propylitic, pervasively hematite altered, granodiorite interval with local fracture zones (i.e. 148.70m). \
149.66	153.18	3.52	GRD	GRD	MG	black-white, unaltered granodiorite with intermittent zones of trace, potassic, propylitic alteration and local hematite stained sections. (altered zones observed mostly as alteration halos for quartz-carbonate and hematite veinlets). Quartz-carbonate vein fragment at 150.87mm contains bladed magnetite, specular hematite and pyrite blebs within a propylitic altered halo.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
153.18	154.44	1.26	GRD	GRD	MG	moderately argillic, weakly potassic-propylitic granodiorite interval containint 3mm-1 cm, quartz-carbonate veinlets (60 degrees TCA). Light pink, rhodocrosite infilling veinlets and loally hosting trae sub-mm,galena and sphalerite are observed in vein section. Coloform bands are locally observed in quartz-carbonate veinlets as well. Calcite infilled veinlets also host trae-sub mm galena. Disseminated pyrite is locally hosted within dark grey, fine grained bands. A 2 cm clear quartz vein parallel to polymetallic , carbonate infilled veins appears to locally brecciate host granodiorite
154.44	162.35	7.91	GRD	GRD	MG	trace potassic, trace propylitic granodiorite with locally variable zones of weak to moderate hematite alteration . 1-5mm, carbonate veinlets are locally observed throughout interval (60 - 80 degrees TCA). 1-2 mm, dark, veinlets (80 degrees TCA) locally hosting blebby pyrite occur on hematite altered granodiorite zones and are locally crosscut by carbonate infilled fractures.
162.35	162.93	0.58	GRD	GRD	MG	moderatelly argillic moderate propylitic, weakly potassic granodiorite interval containing 2-4 mm, quartz-carbonate veinlets (60 degrees TCA). Blebby pyrite is locally hosted in quartz around carbonate infilled veinlet. Trace specular hematite is present in a carbonate infilled fracture that is locally crosscut by quartz-carbonate veinlets.
162.93	163.53	0.60	GRD	GRD	MG	trace potassic, relatively unaltered granodiorite interval
163.53	164.24	0.71	GRD	GRD	MG	Moderately argillic, propylitic, weakly potassic granodiorite interval. Trace 1-4 mm (40 degrees TCA) veinlets are observed on interval.
164.24	164.94	0.70	VEN	VEIN	MG	polymetallic quartz-carbonate vein zone intruded into moderately argillic granodiorite overprinted by weak to moderate propylitic alteration. Vein zone is comprised multiple veinlets ranging from 40-60 degrees TCA. Veins are composed of: 2-3 mm, dark grey, slightly deformed veinlets locally hosting disseminated pyrite, 1cm ,Rhodocrosite-ankerite infilled veinlets, light grey, 1-2cm, carbonate veinlets brecciating grd clasts and smoky quartz veinlets (1-2cm). Rhodocrosite infilled veins (40 degrees TCA) locally brecciate clear quartz vein and locally host sub-mm galena and sphalerite. Vuggy texture is observed in vein section from 164.24-164.59m. Blebby pyrite is locally hosted in clear quartz veinlets. Calcite infilled, fractures locally crosscut perpendiculary through smoky quartz veinlets. Smoky quartz vein locally brecciate host granodiorite and cleartz vein fragments. Trace disseminated pyrite is also present within granodiorite interval.
164.94	171.00	6.06	GRD	GRDA	MG	interval comprised of trace potassic granodiorite with intermittent zones of moderate argillic, weakly potassic, propylitic alteration and locally variable hematite alteration. 2-6mm, quartz-carbonate veinlets (60 degrees TCA) are observed within altered granodiorite at 168.25-168.40m. Rhodocrosite-ankerite partially infill existing quartz vein which locally host blebby pyrite. Carbonates-quartz veinlets form coloform texture. Pyrite blebs are locally hosted near granodiorite alteration halo in veinlet zone (propylitic alteration halo).

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
171.00	172.76	1.76	GRD	GRDA	MG	moderately argillic, trace potassic-propylitic granodiorite interval with locally variable hematite oxidation (most prominent from 171.20-173m). Trace 3-6mm, quartz-carboante veinlets (30 degrees TCA) are locally observed . Trace, pyrite is locally hosted within dark grey bands in quartz-carbonate veinlets. Minor, rhodocrosite partially infilling quartz veinlets occurs at 173.04m.
172.76	173.70	0.94	GRD	GRDA	MG	trace potassic, propylitic, relatively unaltered granodiorite interval with small, weakly argillic alteration halos near 1-4 mm,m quartz-carbonate veinlets (55 degrees TCA)
173.70	174.52	0.82	GRD	GRDA	MG	moderately argillic, trace potassic-propylitic granodiorite interval containing trace 2-4mm, (60 degrees TCA) , quartz-carbonate veinlet.
174.52	176.55	2.03	GRD	GRDA	MG	moderately argillic, trace potassic granodiorite with interittent zones of relatively unaltered granodiorite. Trace 2-8mm, quartz-carbonate veinlets (60 degrees TCA) are locally observed. Weak hematite oxidation is observed at 175.60m and contain 1mm, hematite bands (80 degrees TCA) on hematite altered section
176.55	177.33	0.78	GRD	GRDA	MG	trace potassic, relatively unaltered granodiorite interval.
177.33	178.33	1.00	VEN	GRDA	MG	moderately argillic, weakly propylitic granodiorite with local zones of weak potassic alteration. Interval contains 2mm-2cm, stringer quartz-carbonate veinlets (50-60 degrees . Trace, disseminated pyrite is locally hosted within dark grey, veinlets in vein zone and trace, sub-mm, sphalerite (?)) is locally hosted within carbonate infilled veinlets. A 2mm, gouged brecciated seam if obseeved in vein section @ 178m. Dark grey vein material appears to locally brecciate host granodiorite as well.
178.33	179.14	0.81	GRD	GRDA	MG	strongly argillic, weakly propylitic granodiorite with local zones of weak propylitic alteration. Calcite infilled fractures are locally observed throughout interval.
179.14	180.18	1.04	GRD	GRDA	MG	fractured, rubbly , strongly argillic, weakly potassic granodiorite interval. Hematite oxidation is locally observed on surface and along fracture and joints surfaces.
180.18	181.20	1.02	GRD	VEIN	MG	strongly argillic, trace potassic-propylitic granodiorite interval containting 2mm-1cm, dark grey veinlets (80 degrees TCA) that locally host pyrite and brecciate host granodiorite locally. Lower angle, (50 degrees TCA), quartz-carbonate veinlets locally hosting blebby pyrite are observed from 180.30-180.60m. A 5 mm, grey, gouged brecciated seam is locally observed @ 180.70m.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
181.20	181.47	0.27	VEN	VEIN	MG	polymetallic breccia vein zone intruding into moderately argillic, weakly propylitic granodiorite. Breccia zone is comprised of dark grey, silicified clasts, black fine grained clasts that locally host pyrite, arseno pyrite and galena, pyrite bearing granodiorite brecciated clasts, and dark grey, veinlets that locally host honey brown sphalerite. Ankerite appears to interstitially infill brecciated zone. Vugs containing euhedral calcite and quartz are also observed in breccia vein zone. Clasts in breccia are angular-sub-angular and contain small fragment of host granodiorite (small chlorite, feldspathic, quartz clasts). 1-2 mm, ankerite infilled fractures locally crosscut through brecciate clasts. Light grey, infilled carbonate fractures locally crosscut through calcite-ankerite infilled veinlets.
181.47	181.63	0.16	VEN	VEIN	MG	convoluted, polymetallic vein zone containing blebby pyrite, blebby, acicular-bladed arsenopyrite (texture due to spatial association with sphalerite and pyrite(?); sphalerite deposited first then shortly after acicular , dendritic arsenoand pyrite are deposited(?)), blebby and banded honey brown sphalerite and blebby galena. Vein zone is (55 degrees TCA), and is partially infilled and locally brecciated by ankerite and calcite (possibly rhodocrosite as well). Dendritic pyrite, arsenopyrite and sphalerite are locally hosted in dark grey, moderately hard, veinlets and in dark grey, inclusions within interstitial ankerite and surrounded by milky quartz (milky quartz coming in after polymetallic veins and is replaced by late stage carbonitic fluids that intrude pervasively into quartz veins. Coloform bands surrounding mineralized clasts are locally observed in vein zone. Some light grey, carbonate veinlets appear to micro brecciate host grd.
181.63	182.20	0.57	GRD	VEIN	MG	moderately argillic, weakly propylitic granodiorite interval containing a 3 cm, light grey, gouged brecciate seam (30 degrees TCA) at 181.78m and 2-4mm, polymetallic quartz-carbonate veinlets (40 degrees TCA). Veinlets are partially infilled by light pink rhodocrosite and calcite and locally host trace pyrite, galena and sub-mm sphalerite.
182.20	189.25	7.05	GRD	GRD	MG	trace potassic,trace propylitic granodiorite with intermittent ones of white-black, unaltered granodiorite. 1-3 mm, carbonate veinlets (40 degrees TCA) are observed at 184.20m.
189.25	189.70	0.45	GRD	GRD	MG	moderately argillic-potassic, trace potassic granodiorite interval containing 3-6mm, quartz-carbonate veinlets (60 degrees which locally host blebby pyrite).
189.70	191.94	2.24	GRD	GRD	MG	Trace potassic, relatively unaltered granodiorite interval containing trace 2-6 mm, carbonate veinlets (60 degrees TCA)
191.94	192.53	0.59	GRD	GRD	MG	moderately argillic-potassic granodiorite interval containing a 13 cm, (60 degrees TCA) , light pink, fine grained aplite dyke intrusion that is locally crosscut by a quartz-carbonate veinlet (80 degrees TCA).
192.53	193.30	0.77	GRD	GRD	MG	trace potassic, relatively unaltered granodiorite interval containing a 4 mm, light pink, fine grained ,aplite dyke intrusion (60 degrees TCA).
193.30	194.52	1.22	GRD	GRD	MG	strongly argillic, weakly potassic-propylitic granodiorite interval containing trace 1-2 mm, quartz-carbonate veinlets (80 degrees TCA).

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
194.52	195.22	0.70	VEN	GRD	MG	strongly argillic, trace propylitic granodiorite interval containing 3-7mm, quartz carbonate veinlets (60 degrees TCA) and vein breccia zone at 195.07-195.20 that locallt hosts trace pyrite. Irregular, quartz-carbonate veinlet at 195 locally host blebby pyrite and sub-mm black sphalerite (?)). Brecciated zone is weakly silicified, vuggy , locally host pyrite and trace sphalerite, and locally brecciates host grd. Vuggs in breccia zone contain euhedral , calcite-quartz crystals.
195.22	197.10	1.88	GRD	GRD	MG	trace potassic, relatively unaltered granodiorite with intermittent zones of moderately argillic, weakly potassic and propylitic granodiorite (argillic-potassic mostly as alteration halos near quartz-carbonate veinlets). A fractured, gouged seam is observed at 195.70m (20 degrees TCA). Trace 3-6 mm, quartz carbonate veinlets (60 degrees TCA) are locally observed throughout interval.
197.10	198.80	1.70	GRD	GRD	MG	moderately argillic, weakly propylitic-potassic granodiorite interval displaying locally variable hematite alteration and containing 1-4mm, red, hematite veinlets (40 degrees TCA) which are locally crosscut by calcite infilled fractures. A gouged brecciated seam is observed at 198.35m (20 degrees shear fabric(?)). 8mm, black, magnetite rich veinlet (20 degrees TCA) is crosscut by a 2mm, hematite veinlet at 198.67m.
198.80	201.17	2.37	GRD	GRD	MG	relatively unaltered granodiorite with intermittent zone of weakly potassic,argillic alteration. Trace 3-6 mm, quartz-carbonate veinlets (60 degrees TCA) are locally observed throughout interval.
201.17	204.84	3.67	GRD	GRD	MG	trace potassic, relatively unaltered granodiorite interval with local zones (no larger than 4 cm) of potassic/propylitic alteration (as alteration halos within veinlet zones). 2-8 mm,quartz-carbonate veinlets are locally observed throughout interval (80 degrees TAC)
204.84	205.55	0.71	GRD	GRDA	MG	moderately argillic, weakly potassic granodiorite interval
205.55	206.88	1.33	GRD	GRDA	MG	moderately propylitic granodiorite interval containting trace 2-8mm, quartz-carbonate veinlets (20 degrees TCA) containing red hematite and trace blebby pyrite.
206.88	209.70	2.82	GRD	GRDA	MG	moderately argillic, weakly potassic granodiorite interval with locally variable hematite alteration on surface and along fractures/joint surfaces. A 8mm, quartz-carbonate veinlet (20 degrees TCA) containing trace hematite and trace fine grained pyrite is oserved at 207.66m. 1-2mm, black, hematite infiled veinlets (40-60 degrees TCA) are locally observed throughout interval.
209.70	210.04	0.34	GRD	GRDA	MG	gouged, brecciated,fractured, argillic, weakly potassic granodiorite intervalcontainting dark red, and black fine grained, hematite and magnetite inclusions. Gouged plane appears to be 20 degrees tca.
210.04	210.50	0.46	GRD	GRDA	MG	moderately argillic granodioriteexhibiting pervasive dark red, hematite alteration and containting dark purple/black, hematite-magnetite inclusions and veinlets (30 degrees TCA).
210.50	210.83	0.33	GRD	GRDA	MG	weakly potassic, propylitic granodiorite interval.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
210.83	211.80	0.97	GRD	GRDA	MG	moderately argillic ,weakly potassic, granodiorite interval with local zones of weak to moderate hematite alteration. A 2 cm, quartz-carbonate vein (30 degrees TCA) containing red hematite infill and trace disseminated pyrite is locally observed at 211.70m within hematite altered section. Trace light pink rhodocrosite infill is observed within quartz vein. 1-4 mm, carbonate veinlets (40 degrees TCA) are also present on interval.
211.80	212.58	0.78	GRD	GRDA	MG	trace potassic, propylitic , relatively unaltered granodiorite interval containing 1-3 mm, 30 degrees TCA, carbonate veinlets.
212.58	213.16	0.58	GRD	GRDA	MG	moderately argillic-potassic grnaodiorite interval containing 3-7mm, quartz-carbonate veinlets (50 degrees TCA) and 1-3 mm, 40 degrees TCA, hematite infilled veinlets
213.16	215.96	2.80	GRD	GRDA	MG	trace potassic-propylitic, relatively unaltere granodiorite interval with locally fractured zones and trace 1-2 mm, carbonate veinlets (40 degrees TCA)
215.96	216.83	0.87	GRD	GRDA	MG	moderately propylitic, trace potassic granodiorite interval containing an 8mm, light brown, fine grained aplite dyke intrusion (60 degrees; and its brown due to granodiorite alteration). 3-7 mm, quartz carbonate veinlets (45 degrees TCA) are locally observed within propylitic altered granodiorite interval. Ankerite and rhodocrosite appear to infill and locally brecciate granodiorite vein section at 216.35m. Trace, pyrite is locally hosted in ankerite-rhodocrosite infilled veinlets
216.83	217.84	1.01	GRD	GRDA	MG	trace potassic-propylitic, relatively unaltered granodiorite interval
217.84	218.75	0.91	GRD	GRDA	MG	black-white, unaltered granodiorite interval
218.75	221.35	2.60	GRD	GRDA	MG	Trace potassic, trace propylitic granodiorite interval containing 2-3 cm, strongly propylitic alteration halos near 1-4 mm, quartz-carbonate veinlets (40-80 degrees). Trace pyrite is locally hosted araound 1-4mm, veinlets.
221.35	223.83	2.48	GRD	GRDA	MG	strongly argillic, weakly potassic-propylitic granodiorite interval within intermittent zones of trace potassic-propylitic, relatively unaltered granodiorite. Trace 1 -3 mm, hematite-bearing veinlets (55 degrees TCA) are locally observed on interval. Black, fine grained magnetite inclusions are prominent in altered granodiorite sections
223.83	225.73	1.90	GRD	GRDA	MG	moderately propylitic, weakly argillic granodiorite with local zone of moderate potassic alteration (at 225.55m) containing 1-3 mm , carbonate veinlets (80 degrees TCA) and 7 mm, magnetite bearing, quartz-carbonate veinlets (50 degrees TCA).
225.73	227.43	1.70	GRD	GRDA	MG	Black-white,unaltered granodiorite with local zones of trace potassic alteration.
227.43	228.00	0.57	GRD	GRDA	MG	moderately potassic, weakly argillic-propylitic granodiorite interval 3mm-1 cm, quartz-carbonate veinlets (80 degrees TCA) are locally observed within propylitic altered halo. Trace, sub-mm magnetite and pyrite are locally observed near quartz-carbonate veinlets
228.00	229.08	1.08	GRD	GRDA	MG	weakly propylitic, trace potassic granodiorite with intermittent zones of moderately argillic, trace potassic alteration. Argillic altered section at 228.50 contains 1mm-5mm ,quartz-carbonate veinlets (50 degrees TCA).

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
229.08	230.40	1.32	GRD	GRDA	MG	Moderately propylitic , weakly potassic , trace argillic granodiorite interval containing 3-7 mm, quartz-carbonate veinlets (30 degrees TCA) which locally host trace hematite and trace pyrite. Blebby pyrite is also hosted within propylitic granodiorite.
230.40	231.00	0.60	GRD	GRDA	MG	moderately argillic, weakly potassic granodiorite interval containing trace 1-3 mm, carboante veinlets (40 degrees TCA).
231.00	237.93	6.93	GRD	GRDA	MG	black/white unaltered granodiorite with intermittent zones of weakly potassic/propylitic alteration (mostlyas alteration halo near veinlets). 3-7 mm, quartz-carbonate stringer veinlets (50 degrees TCA) are locally observed throughout interval.
237.93	241.80	3.87	GRD	GRDA	MG	locally fractured, trace potassic-propylitic granodiorite interval containting trace 1-3 mm, dark grey veinlets (60-80 degrees TCA) that locally host trace disseminated pyrite. Moderately propylitic alteration halos near veinlets are commonly observed throughout interval. Dark green chlorite and red hematite commonly occurs along fracture/joint surfaces.
241.80	243.14	1.34	GRD	GRDA	MG	weakly propylitic, trace potassic granodiorite interval with local zones of moderate propylitic alteration. Trace 2-5 mm, quartz-carbonate veinlets (80 degrees TAC) locally hosting magnetite and trace quartz are observed on interval. Local,fracture zones arepresent throughout interval (i.e. 240.50m).
243.14	244.38	1.24	GRD	GRDA	MG	moderately argillic , trace potassic granodiorite interval with weak surface hematite oxidation and local zones of weak to moderate propylitic alteration. 2-7 mm, quartz carbonate veinletss occur from 243.14-293.83m (60 degrees TCA). Lower angle (20 degrees TCA),quartz carbonate veinlets containing hematite and black, sub-mm magnetite (from 244-244.38m).
244.38	246.79	2.41	GRD	GRDA	MG	trace propylitic-potassic granodiorite interval containting trace 1-3 mm, dark grey, veinlets (40-60 degrees TCA) which are locally crosscut by 80 degrees TCA, 1-2mm, carbonate veinlets.
246.79	248.03	1.24	GRD	GRDA	MG	moderately argillic-propylitic granodiorite interval containing trace 3-6 mm, magnetite bearing veinlet (45 degrees TCA). Dark red hematite alteration is locally observed along joint surfaces .
248.03	249.00	0.97	GRD	GRDA	MG	trace propylitic-potassic granodiorite interval with locally fractured zone observed from 248.70m.
249.00	249.33	0.33	GRD	GRDA	MG	moderately argillic, trace propylitic, locally fractured granodiorite interval. Trace 1-2 mm, black magnetite veinlets (50 degrees TAC) are locally observed on interval
249.33	250.26	0.93	GRD	GRDA	MG	weakly propylitic, trace argillic granodiorite interval containing a soft, clayey , gouged brecciate section from 249.90-250.30 (30 degrees TCA gouged brecciated plane). Trace 1-3 mm, 20 degrees TAC, quartz-carbonate veinlets locally hosting pyrite are observed in proptliric altered granodiorite.
250.26	251.60	1.34	GRD	GRDA	MG	weakly argillic-potassic, trace propylitic granodiorite interval displaying weak hematite staining and containing 1-2 mm, black, hematite infilled veinlets (30 degrees TCA). Trace disseminated pyrite is locally observed within granodiorite interval. Interval is fracture from 251.46-251.60. Trace 1-3 mm, carbonate veinlets are also observed throughout interval.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
251.60	252.75	1.15	GRD	GRD	MG	weakly argillic-propylitic, fractured and rubbly granodiorite interval
252.75	254.75	2.00	GRD	GRD	MG	moderately propylitic, weakly argillic granodiorite interval containing 1-3 mm, carbonate veinlets (45 degrees TCA) that locally brecciate host grd. 1-4 mm, quartz veinlets(30 degrees) are locally observed as well throughout interval. Interval is weakly silicified (contains increased quartz clasts). A gouged, brecciated, carbonate infilled vein observed @ 525.55 locally hosts pyrite and sub-mm , black sphalerite (brecciated vein @ 30 degrees TCA).
254.75	257.00	2.25	GRD	GRD	MG	silica flooded, strongly propylitic granodiorite interval containing 1-2 cm, quartz-carbonate veinlets (20 degrees TCA) locally hosting trace pyrite and hematite. 1-3mm, quartz veinlets (60 degrees TCA) locally hosting brassy yellow, soft, slightly magnetic chalcopyrite blebs (or tarnished pyrite (?)) are observed from 255-255.89
257.00	257.97	0.97	GRD	VEIN	MG	moderately propylitic-argillic granodiorite interval containing 1-6mm, quartz-carbonate veinlets (30 degrees TCA), which locally host pyrite, hematite and trace magnetite. 1 cm, quartz veinlet (80 degrees TCA) locally brecciating host granodiorite is observed @ 257.85m.
257.97	259.08	1.11	VEN	VEIN	MG	polymetallic brecciated vein zone in moderately propylitic-argillic granodiorite locally hosting disseminated, blebby pyrite, sub-mm, sphalerite, arsenopyrite and sphalerite. Vein breccia zones are partially infilled and brecciated by ankerite and rhodocrosite (rhodocrosite hosts sub-mm sphalerite and galena as well). Polymetallic veins are (80 degrees TCA). Pyrite is locally hosted in dark grey veinlets (smoky quartz(?) and dark grey, silicified, brecciated clasts. Rhodocrosite and ankerite locally brecciate quartz veinlets and host granodiorite. Quartz veinlets (60-80 degrees) hosting blebby pyrite and magnetite are locally crosscut by polymetallic veins. Polymetallic veins appear slightly deformed and convoluted. A 1 mm, gouged seam is observed @ 259m at 25 degrees TCA. NOTE: rhodocrosite in interval is bright pink, first time observed as bright since hole 455.
259.08	260.23	1.15	GRD	GRD	MG	weakly potassic-argillic , trace propylitic granodiorite containing trace 2-6 mm, dark grey, quartz veinlets locally hosting trace pyrite (40 degrees TCA)
260.23	261.38	1.15	GRD	GRD	MG	weakly argillic, trace potassic granodiorite interval containing trace 3mm-8 mm, quartz-carbonate veinlets (40-80 degrees TCA; larges vein being 80 degrees).
261.38	262.47	1.09	GRD	GRD	MG	moderately argillic, trace potassic, hematite altered granodiorite interval with a local zone of trace potassic, relatively unaltered granodiorite. Altered granodiorite section contains 3-8mm, quartz-carbonate veinlets (25 degrees TCA) which lcally host magnetite, and trace hematite.
262.47	263.47	1.00	GRD	GRD	MG	moderately argillic, trace propylitic granodiorite containing trace 1-2 mm, carbonate veinlets (80 degrees TCA)
263.47	264.76	1.29	GRD	GRD	MG	trace potassic-propylitic, relatively unaltered granodiorite interval
264.76	266.00	1.24	GRD	GRD	MG	weakly argillic-propylitic, trace potassic granodiorite interval

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
266.00	268.12	2.12	GRD	GRD	MG	moderately argillic, trace propylitic granodiorite interval containing 3mm-15 cm, quartz veins 70 degrees TCA) which locally host blebby and banded magnetite and trace, fine grained pyrite. Carbonate infilled fractures appear to locally crosscut quartz veins.
268.12	269.75	1.63	GRD	GRD	MG	moderately argillic-propylitic granodiorite with local zones of trace potassic alteration. 4mm-1 cm,m quartz veinlets (40 degrees TCA) locally hosting blebby magnetite and specular hematite are locally observed.

204.84	210.83	5.99	GRD	MG	interval comprised of moderately argillic weakly potassic granodiorite with intermittent zones of moderate propylitic alteration, and weakly potassic, hematite altered granodiorite. 5-8mm, quartz-carbonate veinlets (30 degrees TCA), locally hosting trace pyrite are observed on interval (i.e. 206-208m). A fractured, gouged brecciated section of granodiorite is observed at 209.70m.

210.83	246.79	35.96	GRD	MG	interval comprised of trace potassic-propylitic, relatively unaltered granodiorite, black-white unaltered granodiorite, moderately argillic, weakly potassic granoiorite and weakly argillic, propylitic granodiorite. Dark red hematite alteration is locally variable most prominent in altered granodiorite sections. A light brown, 1cm , fine grained aplite dyke intrusion (80 degrees TCA)occurs in propylitic altered granodiorite seciton. 2mm-2 cm, quartz-carbonate veinlets are locally observed (30-60 degrees TCA) and sometimes host trace disseminated pyrite (mostly in low angle veins).

246.79	251.60	4.81	GRD	MG	Interval comprised of alternating zones of moderately propylitic,trace argillic granodiorite, trace potassic-propylitic granodiorite and moderately argillic ,weakly potassic granodiorite. Gouged, brecciated section in propylitic granodiorite occurs at 250-250.30m (25 degrees TCA gouged brecciated seams). 2-5 mm,black, magnetite rich quartz-carbonate veinlets (70 degrees TCA) occur in propylitic granodiorite sections. Trace 1-3 mm, carbonate veinlets (60 degrees TCA) are locally observed throughout interval. Hematite infilled veinlets and hematite staining is locally observed from 251-251.60m

						MD	PK		HEM	1I		
						DK	RD		POT	2I		
						MD	GN		PRO	3I		
251.60	257.00	5.40	GRD	MG	moderate to strongly propylitic granodiorite interval with local zones of silica flooding (increased quartz clasts and 1-3 cm, quartz veins (30 degrees TCA)), gouged brecciated sections (from 252-252.60m). 2-6mm, quartz veinlets (45 degrees TCA) locally host brassy yellow, soft, slightly magnetic, chalcopyrite blebs (or just tarnished pyrite(?)).							
						DK	GN		PRO	4I	Ch	2
						MD	GN					
257.00	259.08	2.08	VEN	MG	moderately propylitic-argillic granodiorite interval containing 1-5mm, quartz carbonate stringer veins which locally host trace pyrite, hematite and magnetite. 4mm-3 cm, quartz-carbonate veins (80 degrees TCA) locally host disseminated, blebby pyrite, arsenopyrite , sphalerite and trace galena. Ankerite and light pink rhodocrosite partially infill and brecciate quartz veinlets and sometimes brecciate host granodiorite as well. Pyrite is hosted predominantly in dark grey, light grey veinlets and brecciated clasts within vein brecciated zone. Polymetallic vein breccia zones locally crosscut though thin pyrite bearing , low angle , pyrite-magnetite bearing quartz veinlets (30 degrees TCA). Some veins appear convoluted, and form coloform bands.

						LT	GY		CLY	3I		

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
15.39	19.84	4.45	POR	MG	light-medium brown clay altered quartz feldspar porphyry dyke interval. Dyke matrix is dark green (oxidized (?)) and contains trace 1-4mm carbonate vienlets (40 degrees TCA) and calcite infilled fractures. A dark grey finer grained dyke section is observed at 18.29-18.52							
19.84	21.00	1.16	POR	MG	medium brown-reddish (oxidized), clay altered, quartz feldspar porphyry dyke interval exhibititing gouged brecciated seams (weakly sheared(?)), gouged seams are light grey 0-brown and locally brecciate feldspathic and quartz clasts on dyke interval.							
						MD	BN		CLY	3I		
						LT	BN					
						DK	RD		OXI	3I		
21.00	21.70	0.70	POR	MG	light grey, quartz feldspar porphyry dyke interval with local zones of light brown, clay alteration and displaying gouged brecciation and shear fabric (40 degrees TCA).							
						LT	BN		CLY	3I		
						LT	GY					
21.70	33.14	11.44	POR	MG	light to medium grey, quartz feldspar porphyry dyke interval with local zones of light brown clay alteration and reddish, hematite oxidation. 2-3 cm, soft, clayey , gouged brecciated seams (45 degrees TCA) are locally observed throughout interval. trace 1-4 mm, 25 degrees TCA, carbonate infilled veinlets are observed on interval. 1-3 mm, red hematite clasts are commonly occurring throughout interval.							
						MD	GY					
						LT	GY		CLY	2I		
						LT	BN					
						DK	RD		HEM	1I		
33.14	34.10	0.96	POR	MG	light-medium grey, finer grained, quartz feldspar porphyry dyke interval (initerval is finer grained than previous dyke intervals and appears to contain more feldspathic clasts). Minor, dark red-purple hematite staining is locally variably on interval							

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
34.10	35.10	1.00	POR	FG	fine grained, light-medium gray quartz feldspar porphyry interval with localy zones of reddish hematite staining and clay alteration. Well defined 2-4 mm, bands (60 degrees TCA) are prominent proximal to faulted contact with GRD . Fracture surfaces are locally infilled by oxidized carbonatess.							
						MD	GY		HEM	2I		
						LT	GY					
						DK	RD		CLY	2I		
35.10	35.39	0.29	FLR	FG	soft, clayey gouged brecciated, clay altered,faulted contact between dyke and granodiorite. Dyke interval is dark green-brown (due to oxidation and clay alteration). Shear fabric of 30 degrees TCA is observed in gouged, brecciate faulted seams							
35.39	37.54	2.15	GRD	MG	clay altered (light brown), moderately argillic, trace potassic-propylitic granodiorite interval containing trace 2-6 mm, oxidized, Quartz-carbonate veinlets (35 degrees TCA), which sometimes contain fine grained, disseminated pyrite. Sub-mm, dendritic,black , magnetite inclusions are locally observed on clay altered granodiorite sections that also contain minor reddish, hematite staining. Trace, light pink, rhodocrosite is sporadically observed inleast clay altered granodiorite sections (i.e. 37.40m).

6.10	7.90	1.80	POR	DYK	MG	light brown-dark grey, clay altered, weakly oxidized quartz feldspar porphyry dyke interval with local rubbly zones and containing trace 1-3 mm, carbonate infilled vienlets (80 degrees TCA).
7.90	10.67	2.77	POR	DYK	MG	medium-light grey quartz feldspar porphyry dyke with local zones of clay alteration (mostly within fracture-joint surfaces)
10.67	15.39	4.72	POR	DYK	MG	light-medium grey quartz feldspar porphyry dyke interval with local zones of weakly light brown- clay alteration. Trace 2-5mm, carbonate veinlets (40 degrees TCA) are present at 14.55m. 1-3mm, sub- angular, hematite clasts are commonly observed throughout dyke interval. Dqrk grey, fine grained, magnetic inclusions are observed on dyke containing a clay altered, light brown rim.
15.39	19.84	4.45	POR	DYK	MG	light-medium brown clay altered quartz feldspar porphyry dyke interval. Dyke matrix is dark green (oxidized (?)) and contains trace 1-4mm carbonate vienlets (40 degrees TCA) and calcite infilled fractures. A dark grey finer grained dyke section is observed at 18.29-18.52
19.84	21.00	1.16	POR	DYK	MG	medium brown-reddish (oxidized), clay altered, quartz feldspar porphyry dyke interval exhibititing gouged brecciated seams (weakly sheared(?)), gouged seams are light grey 0- brown and locally brecciate feldspathic and quartz clasts on dyke interval.
21.00	21.70	0.70	POR	DYK	MG	light grey, quartz feldspar porphyry dyke interval with local zones of light brown, clay alteration and displaying gouged brecciation and shear fabric (40 degrees TCA).
21.70	33.14	11.44	POR	DYK	MG	light to medium grey, quartz feldspar porphyry dyke interval with local zones of light brown clay alteration and reddish, hematite oxidation. 2-3 cm, soft, clayey , gouged brecciated seams (45 degrees TCA) are locally observed throughout interval. trace 1-4 mm, 25 degrees TCA, carbonate infilled veinlets are observed on interval. 1-3 mm, red hematite clasts are commonly occurring throughout interval.
33.14	34.10	0.96	POR	DYK	MG	light-medium grey, finer grained, quartz feldspar porphyry dyke interval (initerval is finer grained than previous dyke intervals and appears to contain more feldspathic clasts). Minor, dark red-purple hematite staining is locally variably on interval

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
34.10	35.10	1.00	POR	DYK	FG	fine grained, light-medium gray quartz feldspar porphyry interval with localy zones of reddish hematite staining and clay alteration. Well defined 2-4 mm, bands (60 degrees TCA) are prominent proximal to faulted contact with GRD . Fracture surfaces are locally infilled by oxidized carbonatess.
35.10	35.39	0.29	FLR	DYK	FG	soft, clayey gouged brecciated, clay altered,faulted contact between dyke and granodiorite. Dyke interval is dark green-brown (due to oxidation and clay alteration). Shear fabric of 30 degrees TCA is observed in gouged, brecciate faulted seams
35.39	37.54	2.15	GRD	GRD	MG	clay altered (light brown), moderately argillic, trace potassic-propylitic granodiorite interval containing trace 2-6 mm, oxidized, Quartz-carbonate veinlets (35 degrees TCA), which sometimes contain fine grained, disseminated pyrite. Sub-mm, dendritic,black , magnetite inclusions are locally observed on clay altered granodiorite sections that also contain minor reddish, hematite staining. Trace, light pink, rhodocrosite is sporadically observed inleast clay altered granodiorite sections (i.e. 37.40m).
37.54	39.62	2.08	GRD	GRD	MG	trace potassic-propylitic granodiorite interval with local zones of weak clay alteration. Limonite infilling fracture/joint surfaces is commonly observed . Trace 1-3 mm, clay altered, oxidized, quartz-carbonate veinlets locally hosting hematite and trace disseminate pyrite are observed on interval (40 degrees TCA).
39.62	41.65	2.03	GRD	GRD	MG	interval comprised clay altered, trace potassic-propylitic granodiorite with intermittent zones of moderately argillic, trace potassic alteration. 2-4 mm, carbonate veinlets (80 degrees TCA) are observed in sections with least clay alteration. 2-5 mm,clay altered, oxidized, quartz-carbonate veinlets, sometimes hosting trace disseminated pyrite (35 degrees TCA) are commonly observed throughout interval.
41.65	45.00	3.35	GRD	GRD	MG	interval comprised of strongly argillic, trace propylitic granodiorite with local zones of light-brown, pervasiveclay alteration and local zones of dark red, hematite alteration. 4mm-2 cm, quartz-carbonate veinlets (40 degrees TCA) locally hosting trae pyrite and sub-mm sphalerite are observed throughout interval.
45.00	45.63	0.63	GRD	GRD	MG	weakly argillic, trace potassic granodiorite containing 1-4mm, hematite and clay altered, quartz-carbonate veinlets (30 degrees TCA) .
45.63	47.55	1.92	GRD	GRD	MG	trace potassic granodiorite with intermittent zone of pervasively clay altered, weakly argillic granodiorite. 2-5 mm, hematite and clay altered, quartz carbonate veinlets (35 degrees TCA) are locally observed throughout interval.
47.55	48.77	1.22	GRD	GRD	MG	pervasively clay, hematite altered, weakly potassic, trace propylitic granodiorite interval containting 2-5 mm, 35 degres TCA, quartz-carbonate veinlets sometimes hosting blebby pyrite. Calcite-limonite infilled fractures are locally observed throughout interval as well.
48.77	49.47	0.70	GRD	GRD	MG	trace potassic-propylitic granodiorite interval with local ones of weak potassic alteration and locally variable clay alteration and dark red hematite oxidation. 2-4 mm, quartz-carbonate veinlets (30 degrees TCA) locally hosting bleby pyrite and black, metallic lustered, micaceous, non magnetic mineral (Mg-rich mica(?).

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
49.47	55.53	6.06	GRD	GRD	MG	white-black, unaltered granodiorite with local zones of trace potassic-propylitic alteration and minor light-brown clay alteration and local zones of pervasive dark red hematite oxidation. Trace 1-3 mm, black fine grained,quartz-carbonate veinlets (40 degrees TCA) sometimes locally hosting trace pyrite are locally observed throughout interval
55.53	56.30	0.77	GRD	GRD	MG	unaltered granodiorite interval with pervasive hematite oxidation. 3-5 mm, 45 degrees TCA, carbonate veinlets containing red hematite and yellowish/green carbonates are locally observed throughout interval
56.30	60.16	3.86	GRD	GRD	MG	trace potassic, relatively unaltered granodiorite interval containing weak hematite oxidation. A 2 cm, dark red, hematite altered, gouged brecciated seam (20 degrees TCA) locally hosting blebby pyrite is observed at 58.30m. A 4 mm, quartz-carbonate veinlet proximal to gouged seam locally hosts blebby pyrite and specular hematite blebs. 2-5 mm, 80 degrees TCA ,quartz-carbonate veinlets are present from 58.71-89m.
60.16	62.90	2.74	GRD	GRD	MG	black-white unatere granodiorite interval with minor clay alteration and limonite alteration along fractures and joint surfaces. Minor hematite alteration is locally observed on surface in some grd sections.
62.90	63.10	0.20	GRD	GRD	MG	fractured unaltered granodiorite interval displaying clay alteration along fracture surfaces
63.10	67.60	4.50	GRD	GRD	MG	unaltered granodiorite interval with local zones f pervasive hematite oxidation. A dark red, hematite altered, gouged brecciated seam is locally observed at 66.40m. Trace disseminated pyrite is observed near gouged zone within granodiorite host and in gouged seam. Dark, fine grained, magnetic, mafic inclusions are locally observed in hematite altered granodiorite zones. 1-2 mm, quartz-carbonate veinlets (20 degrees TCA) posibly hosting trace chalcopyrite (brassy yellow , soft) are contained within mafic inclusions zone occurs at 67.50m
67.60	68.75	1.15	GRD	GRD	MG	black-white, unaltered granodiorite interval
68.75	70.00	1.25	GRD	GRD	MG	moderately argillic-potassic granodiorite interval with local zones of weak propylitic alteration (as alteration halo near quartz-carbonate veinlets). 5-9mm, quartz-carbonate veinlets (60 degrees TCA) locally hosting trace pyrite is observed at 69.39m. (rhodocrosite and calcite appear to infill and locally brecciate quartz vein).
70.00	71.00	1.00	GRD	GRD	MG	weakly potassic , trace argillic-propylitic granodiorite interval displaying dark red, pervasive hematite oxidation on surfaces and along fracture/joint surfaces. From 70.80-71m , black, fine grained, magnetic mafic inclusion locally brecciates and intersitially intrudes into granodiorite host (near contact with mafic dyke intrusion).
71.00	71.38	0.38	GRD	GRD	MG	light brown-black, clay altered and oxidized , slightly magnetitic, clast bearing, mafic intrusion in granodiorite. Calcite infilled fractures and 2-5mm, quartz-carbonate veinlets (60 degrees TCA) are observed throughout mafic intrusion. 80 degrees TCA,gouged brecciated, clay altered seam is observed at the granodiorite, mafic intrusion contact. (mafic intrusion near the contact locally brecciates and intersititally intrudes into argillic-potassic altered granodiorite).

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
71.38	73.83	2.45	GRD	GRD	MG	trace potassic granodiorite interval with localy zones of weakly argillic-potassic alteration (mostly as alteration halo near veinlets). 3-6 mm, quartz-carbonate veinlets (60 degrees TCA)locally hosting trace disseminated pyrite are commonly observed on interval within potassic-argillic alteration halos. A 2 cm, light brown, clay altered , gouged brecciated seam (60 degrees TCA) is observed at 172.50m.
73.83	74.68	0.85	GRD	GRD	MG	black-white, unaltered granodiorite interval with trace 1-4 mm, quartz-carbonate veinlets (60 degrees tca), with trace potassic alteratin halo, locally hosting trace disseminated pyrite.
74.68	80.60	5.92	GRD	GRD	MG	Trace potassic-propylitic , unaltered granodiorite interval containing 2-3mm, quartz-carbonate, stringer veinlets locally hosting trace blebby pyrite (50 degrees TCA). Stringer veins contain 1-2 cm propylitic alteration halo.
80.60	82.50	1.90	GRD	GRDA	MG	strongly argillic,trace potassic granodiorite intreval containing trace 2-3mm, carbonate veinlets (60 degrees TCA)/
82.50	84.10	1.60	GRD	GRDA	MG	moderately argillic, weakly propylitic granodiorite interval containing 6-8m, quartz-carbonate veinlets (60 degrees TCA), locally hosting trace pyrite,sphalerite and possily galena. Ankerite and possibly rhodocrosite partially infill and locally brecciate quartz veinlet. Trace phyllic alteration expressed as increased quartz clasts, disseminated pyrite in grd is present near veinlet zones. Fracturing and clay alteration are oobserved from 82.50-82.65m
84.10	84.55	0.45	GRD	GRDA	MG	moderately argillic, trace potassic granodiorite interval
84.55	86.61	2.06	GRD	GRD	MG	trace potassic, relatively unaltered granodiorite interval with local zone of dark red, hematite alteration
86.61	87.00	0.39	GRD	GRD	MG	moderately argillic, weakly potassic granodiorite interval containing 2-5 mm, quartz carbonate veinlets (40 degrees TCA).
87.00	88.00	1.00	GRD	GRD	MG	relatively unaltered granodiorite interval containing 1-5mm, quartz carbonate veinlets (60-80 degrees TCA).
88.00	91.44	3.44	GRD	GRD	MG	trace potassic, relatively unaltered granodiorite with local zones of pervasive hematite alteration. Hematite altered section contains 1-2 mm, oxidized veinlets (80 degrees TCA)
91.44	92.00	0.56	GRD	GRD	MG	black-white, unaltered granodiorite interval
92.00	93.28	1.28	GRD	GRD	MG	trace potassic, granodiorite interval displaying weak clay alteration and weakly pervasive hematite alteration.
93.28	94.00	0.72	GRD	GRD	MG	moderately argillic, weakly potassic granodiorite interval containing trace 1-4 mm, quartz-carbonate veinlets (50 degrees TCA).
94.00	95.20	1.20	GRD	GRD	MG	trace potassic, relatively unaltered granodiorite interval with local zones of weak hematite alteration. 5 mm, quartz-carbonate veinlet (40 degrees TCA) is observed on interval
95.20	96.74	1.54	GRD	GRD	MG	black-white , unaltered granodiorite interval

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
96.74	97.54	0.80	GRD	GRD	MG	locally fractured, clay altered, weak hematite altered granodiorite interval
97.54	109.80	12.26	GRD	GRD	MG	black-white, unaltered granodiorite interval with local zone of weak hematite alteration . Trace 1-4 mm, quartz-carbonate veinlets (20 degrees TCA) occur sporaically throughout interval.
109.80	111.00	1.20	GRD	GRD	MG	trace potassic, granodiorite interval with weak hematite alteration. A 1 cm, slightly deformed (weakly sheared), oxidized, quartz-carbonate veinlet (30 degrees TCA0 is observed at 109.85m Hematite appears to partially infill and locally brecciate quartz-carbonate veinlet .
111.00	112.15	1.15	GRD	GRD	MG	weakly sheared, weakly propylitic granodiorite interval with pervasivev hematite alteration. An 80 degrees TAC, gouged brecciated seam is observed at 112 m, within moderately silicified , propylitic altered granodiorite. 2 cm, quartz veins (60 degrees TCA) occur at the contact with clay altered dyke 112.15m. Disseminated pyrite is locally hoste in silicified, propylitic altered granodiorite zone near and within quartz veinlets
112.15	113.58	1.43	POR	DYK	MG	locally fractured, clay altered, light-medium brown, fine grained dyke intrusion containing 1-2mm, carbonate veinlets (30 degrees TCA). (faulted dyke interval (?))
113.58	114.33	0.75	GRD	GRDA	MG	clay altered, sheared (45 degrees TCA sear fabric), gouged brecciated,moderately argillic granodiorite interval containing 2-5 mm, quartz-carbonate , clay infilled, oxidized, veinlets (40 degrees TCA)
114.33	116.11	1.78	GRD	GRDA	MG	Weakly propylitic-trace potassic granoiorite interval with loal zones of pervaive hematite oxidation. Soft, gouged, sheared sections are loaclly observed @ 115.10m. (shear fabric ~ 45 degrees TCA. 1-2 mm, carbonate veinlets (40 degrees TCA) are occur throughout interval.
116.11	118.60	2.49	GRD	GRDA	MG	moderately propylitic-argillic altered granodiorite with local zones of pervasive, dark red hematite alteration. Hematite altered sections contain black, fine grained magnetite inclusions. Black, metallic lustered, non magnetic (tourmaline (?)) inclusions are observed @ 111.60-112m. Blebby pyrite is locally observed near magnetite bearing zones in altered granodiorite (i.e. 111.85m). Gouged seam (60 degrees TCA) is observed in hematite altered section at 111.50m.
118.60	122.15	3.55	GRD	GRDA	MG	strongly argillic granodiorite with pervasive dark red, hematite oxidation and local zones of weakly propylitic alteration. Trace 2-7 mm, quartz-carbonate veinlets (40 degrees TCA) locally hosting trace blebby pyrite, hematite and magnetite are observed throughout interval. Some quartz-carbonate veinlets appear to locally brecciate host granodiorite.
122.15	124.00	1.85	GRD	GRDA	MG	strongly argillic, trace potassic granodiorite with weak pervasive hematite oxidation and containting trace 1-5mm, quartz carbonate veinlets which sometimes host trace pyrite and magnetite. Minor clay alteration is observed @ 123.65m.
124.00	124.54	0.54	GRD	GRDA	MG	clay altered, locally fractured, moderately argillic, trace potassic granodiorite interval
124.54	125.10	0.56	GRD	GRDA	MG	moderately argillic, weakly potassic granodiorite interval with weak pervaive hematite alteration.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
125.10	126.88	1.78	GRD	GRDA	MG	strongly argillic ,trace potassic-propylitic granodiorite interval exhibiting a clay altered, gouged brecciated seam (20 degrees TCA) at 175.70m. Dark red, hematite alteration occurs from 126.53-126.88
126.88	128.02	1.14	GRD	GRDA	MG	relatively unaltered granodiorite with local zones of dark red, hematite alteration.]
128.02	128.90	0.88	GRD	GRDA	MG	moderate argillic, weakly potassic, hematite altered granodiorite interval containing 1-5 mm, quartz-carbonate veinlets (60-80 degreees TCA)which locally brecciate host granodiorite (i.e. 128.34m). Some veinlets contain dark red hematite infill and locally host disseminated pyrite
128.90	130.12	1.22	GRD	GRDA	MG	trace potassic-propylitic, hematite altered, granodiorite interval containing trace 1-4mm, quartz-carbonate veinlets (80 degrees TCA) sometimes hosting trace pyrite.
130.12	132.90	2.78	GRD	GRDA	MG	Strongly argillic, weakly potassic granodiorite interval with local zones of pervasive hematite oxidation. 1mm-1 cm, quartz-carbonate stringer veinlets, sometimes locally hosting trace pyrite are locally observed throughout interval (60 degrees TCA). A clay altered, gouged brecciated sections occurs at 132.40m.
132.90	135.77	2.87	GRD	GRDA	MG	trace potasic granodiorite interval with weak hematite oxidation andcontaining trace 1-2 mm, calcite infilled fractures and 1-4 mm, quartz-carbonate veinlets (40 degrees TCA).
135.77	136.68	0.91	GRD	GRDA	MG	moderately argillic, trace potassic-propylitic granodiorite with local zones of weak pervasive hematite alteration. Trace 1 -3 mm, hematite infilled, quartz-carbonate veinlets are locally observed throughout interval (60-80 degrees TCA)
136.68	137.57	0.89	GRD	GRDA	MG	trace potassic, relatively unaltered granodiorite interval
137.57	139.00	1.43	GRD	GRDA	MG	strongly argillic, weakly propylitic granodiorite with local zone of weak potassic alteration and dark red hematite oxidation. 3-8mm, quartz-carbonate veinlets (45 degrees TCA), sometimes containing red hematite and trace pyrite are locally observed on interval
139.00	139.51	0.51	BXA	GRDA	MG	strongly silicified, quartz-carbonate breccia vein zone locally hosting trace disseminated pyrite. Tan, ankerite appears to infill and locally brecciate quartz -bearing breccia vein sections. Granodiorite clasts are locally brecciated by quartz within breccia vein zone. Small vuggs are also observed within quartz breccia vein zone.
139.51	141.84	2.33	GRD	GRDA	MG	interval comprised of moderately argillic, weakly potassic granodiorite and trace potassic, relatively unaltered granodiorite. 2-6 mm, quartz carbonate veinlets, sometimes locally hosting trace ,disseminated pyrite are locally observed . Fractured zone is oserved at 140.50m.
141.84	144.44	2.60	GRD	GRD	MG	unaltered granodiorite interval with local zones of weak dark red, hematite oxidation

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
144.44	147.30	2.86	GRD	GRD	MG	relatively unaltered granodiorite interval with weakly to moderate pervasive hematite oxidation and containing trace 1-3 mm, quartz-carbonate veinlets (60 degrees TCA). Fractured, rubbly zone is observed from 146-147.09 m. fractured, rubbly zone exhibits light brown, clay alteration and dark red hematite oxidation.
147.30	149.00	1.70	GRD	GRD	MG	strongly argillic granodiorite with weak hematite alteration and containing 3-6 mm, quartz-carbonate veinlets(60 degrees TCA) which sometimes locally host trace, pyrite. A soft, gouged , fracutred section is observed at 147.85m.
149.00	150.20	1.20	GRD	GRD	MG	locally fractured, trace potassic-propylitic, relatively unaltered granodiorite interval exhibiting weak hematite oxidation on surface and along joints/fractures.
150.20	153.80	3.60	GRD	GRD	MG	locally fractured, trace potassic-propyitic granodiorite interval containing 4-8 mm, quartz-carbonate veinlets (60 degrees TCA) which locally host trace pyrite. Weak hematite alteration is locally observed on surface and along fractures/joints.
153.80	154.90	1.10	GRD	FLT	MG	faulted, rubbly , hematite altered granodiorite interval. 1-3 cm calcite fragments are locally observed throughout rubbly interval
154.90	156.20	1.30	GRD	GRDA	MG	black-white, unaltered granodiorite intervalwith local zones of dark red, hematite alteration. Trace 3-4 mm, quartz-carbonate veinlets (60 degrees TCA) are locally observed
156.20	157.56	1.36	GRD	GRDA	MG	moderately argillic weakly propylitic granodiorite interval containing trace 5-7mm, quartz-carbonate veinlets which locally host trace pyrite (60 degrees TCA).
157.56	158.07	0.51	GRD	GRDA	MG	trace propylitic,hematite altered granodiorite
158.07	158.65	0.58	GRD	GRDA	MG	moderately argillic, weakly propylitic granodiorite containing light grey, gouged brecciated section (30 degrees TCA) which locally hosts blebby and disseminated pyrite. Blebby pyrite is observed along fracture surfaces in gouge brecciated section
158.65	165.66	7.01	GRD	GRD	MG	black-white, unaltered granodiorite with local zones of weak to moderate hematite alteration. Trace 1-4 mm, quartz-carbonate veinlets (60 degrees TAC) are locally oserved throughout interval
165.66	168.60	2.94	GRD	GRD	MG	trace potassic, relatively unaltered granodiorite with localy zones of weak hematite alteration.
168.60	176.03	7.43	GRD	GRD	MG	black-white unaltered granodiorite interval with minor zones of weak , dark red hematite alteration (interval is less altered than previous one). Trace 1-5 mm , quartz-carbonate veinlets , sometimes locally hosting trace pyrite are locally observed (40-60 degrees TCA). (trace potassic alteration halos (1-2 cm) observed near veinlet zones.
176.03	179.70	3.67	GRD	GRD	MG	black-white unaltered granodiorite, with local zones of pervasive hematite alteration. 1-6 mm, quartz-carbonate veinlets sometime hosting trace pyrite are loaclly observed (40 degrees TCA). A black fine grained, mafic inclusions is observed at 179.30

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
179.70	182.37	2.67	GRD	GRD	MG	black-white unalteredgranodiorite with local zones of trace potassic alteration and weak hematite alteration (hematite alteration is more pervasive and darker red than potassic).
182.37	183.35	0.98	GRD	GRD	MG	Black-white, unaltered granodiorite with pervasive dark red hematite alteration containing 1-8 mm, quartz carbonate veinlets (60 degrees TCA)
183.35	184.02	0.67	GRD	GRD	MG	black-white unaltered granodiorite interval. minor dark red hematite oxidation is observed along fracture/join surfaces.
184.02	185.75	1.73	GRD	GRD	MG	pervasively hematite altered granodiorite interval containing 1-5 mm, quartz carbonate stringer veinlets (40 degrees TCA).
185.75	191.28	5.53	GRD	GRD	MG	trace potassic, relatively unaltered granodiorite with local zones of weak to moderate hematite alteration. 1-7 mm, quartz-carbonate veinlets (40 degrees TCA) , sometimes hosting trace disseminated pyrite are locally observed
191.28	192.10	0.82	GRD	GRDA	MG	trace potassic-propylitic granodiorite interval containing a 5 mm, light pink aplite dyke intrusion (80 degrees TCA) at 191.31m. A 10 cm, dark green(propylitic), polymictic inclusion is observed at 181.40m where a 3 mm, quartz carbonate veinlet (60 degrees TCA) is observed at the boundaries of the propylitic altered, polymictic inclusion.
192.10	193.47	1.37	GRD	GRDA	MG	weakly argillic-potasic granodiorite interval containing 2-6mm, quartz carbonate veinlets (60 degrees TCA). Dark red, hematite alteration halos are observed within fracture surfaces.
193.47	195.40	1.93	GRD	GRDA	MG	trace potassc-propylitic granodiorite interval containing 1-8 cm, pink, fine grained, aplite dyke intrusions (80 degrees TCA). Largest intrusion is light green (likely due alteration in host grd).
195.40	195.60	0.20	GRD	GRDA	MG	moderately argillic, weakly potassic granodiorite interval
195.60	196.24	0.64	GRD	GRDA	MG	black-white unaltered granodiorite interval
196.24	198.63	2.39	GRD	GRDA	MG	trace potassic, relatively unaltered granodiorite interval with local zones of weak to moderate, pervasive, dark red, hematite alteration. Minor, 3-6mm, quartz-carbonate veinlets (40 degrees TCA) occur sporadically throughout interval
198.63	199.28	0.65	GRD	GRDA	MG	black-white unaltered granodiorite interval
199.28	199.79	0.51	GRD	GRDA	MG	moderately argillic weakly potassic granodiorite with weak to moderate ,dark red hematite alteration 1-6mm, quartz carbonate veinlets (40 degrees TCA) are locally observed throughout interval. Tan, ankerite partially inilling veinlets is observed on interval
199.79	201.49	1.70	GRD	GRDA	MG	trace potassic-propylitic granodiorite with local zones of pervasive dark red alteration. 1-2mm, 80 degrees TCA, dark grey, veinlets sometimes hosting trace disseminated pyrite are locally observed.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
201.49	204.85	3.36	GRD	GRDA	MG	moderately argillic, trace propylitic granodiorite with local zones of trace potassic alteration and dark red hematite oxidation. Locally fracture zone is observed from 204.30-204.70m. Calcite infilled fractures are locally observed throughout interval.
204.85	205.25	0.40	BXA	GRDA	MG	moderately silicified , quartz-carbonate breccia vein zone locally hosting trace disseminated pyrite and possibly black sub-mm magnetite. (no significant mineralization observed throughout vein breccia). Light grey, tan quartz-carbonate locally brecciate host granodiorite.
205.25	207.66	2.41	GRD	GRDA	MG	moderately argillic, trace propylitic granodiorite with local zones of trace potassic alteration. 1-4 mm, carbonate veinlets (60 degrees TCA) are locally observed throughout interval. a light grey, gouged brecciated seam is observed at 206.10m.
207.66	209.41	1.75	GRD	GRDA	MG	trace potassic-propylitic, relatively unaltered granodiorite interval containing 2-8mm, quartz-carbonate stringer veinlets (60 degrees TCA) which locally host disseminated pyrite.
209.41	210.87	1.46	GRD	GRDA	MG	moderately argillic, trace potassic granodiorite exhibiting dark red, pervasive hematite alteration. 1-5 mm, red, hematite altered, quartz-carbonate veinlets (30 degrees TCA) are locally observed throughout interval.
210.87	216.70	5.83	GRD	GRDA	MG	black-white, unaltered granodiorite interval with locally variable, weak to moderate hematite alteration zones. 2-8 mm, quartz-carbonate veinlets (40 degrees TCA), sometimes hosting hematite, and trace pyrite are observed throughout interval.
216.70	217.63	0.93	GRD	GRDA	MG	trace potassic-propylitic granodiorite interval with intermittent zones of strongly argillic-trace potassic alteration. 1-8mm, quartz-carbonate veinlets (40 degrees TCA), locally hosting disseminated pyrite occur throughout interval.
217.63	218.82	1.19	VEN	VEIN	MG	strongly argillic, trace propylitic-phyllic altered granodiorite intruded by 1-4 cm, quartz-carbonate polymetallic veins locally hosting pyrite, trae sphalerite and sub-mm galena. Light pink rhodocrosite and ankerite partially infills and locally brecciates host quartz vein and altered granodiorite. A light grey, carbonate veinlet (4 cm) locally crosscuts through ankerite-quartz veinlet at 218.80m. Quartz veins are vuggy and contain euhedral calcite and quartz primatic crystals formed within vugg spaces. Sub-mm sphalerite and possibly galena are spatially associated with rhodocrosite infilled veinlets. Disseminated pyrite is also observed throughout altered granodiorite host.
218.82	219.48	0.66	GRD	GRDA	MG	strongly argillic, weakly potassic granodiorite interval containing trace 2-5 mm, quartz-carbonate veinlets (80 degrees TCA).
219.48	220.20	0.72	GRD	GRDA	MG	trace propylitic-potassic, granodiorite interval.
220.20	220.84	0.64	GRD	GRDA	MG	strongly argillic, trace potassic-propylitic granodiorite interval containing 4-8mm, quartz-carbonate veinlets (80 degrees TCA) which locally host trace pyrite

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
220.84	222.29	1.45	GRD	GRDA	MG	trace potassic-propylitic granodiorite with small intermittent zones of argillic-potassic alteration (as alteratio halos near quartz-carbonate veinlets). 2-6 mm, quartz-carbonate veinlets (60 degrees TCA) are locally observed throughout interval.
222.29	224.96	2.67	GRD	GRDA	MG	moderately argillic, trace propylitic granodiorite containing 3-7mm, quartz-carbonate veinlets (80 degrees TCA) which locally host disseminated pyrite . Quartz veinlets appear to be partially infilled by light pink rhodocrosite.
224.96	225.20	0.24	GRD	GRDA	MG	moderately argillic, weakly propylitic granodiorite interval containing 4-7 mm, black-dark green, microbrecciated, soft veinlets (chloritized veinlets (?))(40 degrees TCA). A light grey, gouged brecciated seam is observed at 225.97m where a 1 cm, quartz-carbonate veinlet locally hosting pyrite is present at contact with gouged seam.Trace,disseminated pyrite is locally observed throughout granodiorite interval.
225.20	226.40	1.20	GRD	GRDA	MG	moderately argillic, granodiorite with local zones of dark red hematite alteration. 3-6mm, quartz-carbonate veinlets (30 degrees TCA) are locally observed on interval.
226.40	230.75	4.35	GRD	GRDA	MG	interval comprised of alternating zones of moderately argillic granodiorite and moderately propylitic altered granodiorite zones. 1-2 mm, black, fine grained veinlets (40 degrees TCA) sometimes hosting trace disseminated pyrite.
230.75	232.72	1.97	GRD	GRDA	MG	moderate propylitic granodiorite interval containing 2-3mm veinlets locallyl hosting trace pyrite and black, fine grained, dendritic magnetite. A 1 cm, quartz0caronate vienlet locally hosting pyrite within dark grey bands is observed at 232.50m. Disseminated pyrite is also locally observed throughout granodiorite interval
232.72	233.36	0.64	MAF	GRDA	MG	moderate propylitic granodiorite interval containing a black ,fine grained, silicified(?), dyke mafic intrusion (basaltic dyke ?), bound by 4mm-1 , polymetallic quart-carbonate veinlets. Quart-carbonate veinlets (60 degrees TCA) contain blebby pyrite, sphalerite and trace arseno pyrite. Black mafic intrusion contains 1-3 cm, lighter grey, irregular (vesicles(?)), which locally host blebby pyrite, sphalerite and trace arsenopyrite.
233.36	237.00	3.64	GRD	GRDA	MG	moderately argillic, trace potassic granodiorite interval.
237.00	241.50	4.50	GRD	GRD	MG	Unaltered granodiorite with minor alternating zones of weakly argillic to propylitic altered granodiorite, with local weak hematite alteration overprinting argillic zones. Minor carbonate +- quartz stringers and veinlets found throughout.
241.50	243.13	1.63	GRD	GRD	MG	Weakly argillic altered granodiorite with weak propylitic overprinting. Area has very faint red pervasive staining that is either secondary hematite alteration or a final overprint of potassic(?) alteration.
243.13	249.73	6.60	GRD	GRD	MG	Unaltered granodiorite with minor carbonate stringers and veinlets.
249.73	252.00	2.27	GRD	GRD	MG	Weakly argillic altered granodiorite with weak propylitic overprinting. Area has very faint red pervasive staining that is either secondary hematite alteration or a final overprint of potassic(?) alteration.

Largest aplite dyke intrusion appears to be locally crosscut by a smaller, darker pink, 1 cm aplite dyke intrusion .2-7mm, quartz carbonate veinlets (40 degrees TCA) , sometimes host trace disseminated pyrite.

201.49	207.66	6.17	GRD	MG	interval comprised of weakly propylitic, trace potassic granodiorite with intermittent zones of strongly argillic, trae potassic-propylitic granodiorite. A gouged, brecciated seam at 204.86m is observed at contact with moderately silicified, quartz-carbonate vein breccia. 1-8mm, quartz-carbonate veinlets are locally observed thourhgout interval (40 degrees tca) sometimes locally hosting trace pyrite and black, tourmaline (?).

207.66	217.63	9.97	GRD	MG	interval comprised of trace potassic-propylitic , relatively unaltered granodiorite with intermittent zones of moderately argillic-weakly potassic altered granodiorite. 3-7 mm, quartz-carbonate veinlets (40 degrees TCA)sometimes locally host trace disseminated pyrite. Local zones of pervasive ,dark red hematite oxidation are locally observed in unaltered granodiorite sections.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
217.63	218.82	1.19	VEN	MG	strongly argillic, trace propylitic-phyllic altered granodiorite intruded by 1-4 cm, quartz-carbonate polymetallic veins locally hosting pyrite, trae sphalerite and sub-mm galena. Light pink rhodocrosite and ankerite partially infills and locally brecciates host quartz vein and altered granodiorite. A light grey, carbonate veinlet (4 cm) locally crosscuts through ankerite-quartz veinlet at 218.80m. Quartz veins are vuggy and contain euhedral calcite and quartz primatic crystals formed within vugg spaces. Sub-mm sphalerite and possibly galena are spatially associated with rhodocrosite infilled veinlets. Disseminated pyrite is also observed throughout altered granodiorite host.						Rh	4

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
14.50	14.55	VN	37	40	NUL	1	5 mm, carbonate vienlet in quartz feldspar porphyry dyke interval			
19.81	20.00	GO	34	65	NUL	1	gouged brecciated seam in clay altered quartz feldspar porphyry dyke interval			
21.00	21.20	VN	37	40	NUL	1	5 mm, quart-carbonate veinlet in clay altered quartz feldspar porphyry dyke interval			
21.55	21.65	GO	34	60	NUL	1	gouged brecciate seam in quartz feldspar porphyry dyke interval			
29.40	49.50	GO	34	-	NUL	1	gouged brecciated seam in quartz feldspar porphyry dyke interval			
35.08	35.83	GO	34	40	NUL	1	gouged brecciated section at contact between quartz feldspar porphyry dyke an granodiorite.			
36.08	36.12	VN	37	40	NUL	1	5 mm, quartz-carbonate veinlet surrounded by 1 mm limonite bans in argillic, clay altered granodiorite			
37.00	37.12	VN	37	40	NUL	1	2 cm, quartz-carbonate veinlet locally brecciating host clay altered, argillic granodiorite			
39.70	39.85	VN	37	80	NUL	4	3-4 mm, quartz-carbonate veinlets in argillic-propylitic altered granodiorite. Trace pyrite an magnetite is observed around veinlets.			
40.30	40.40	VN	37	40	NUL	1	5 mm, clay altered, oxidized quartz-carbonate veinlet in clay altered, weakly argillic-propylitic granodiorite			
42.20	42.25	VN	37	60	NUL	1	1 cm , quartz- carbonate veinlet in clay altered, hematite altered granodiorite locally hosting trace pyrite			
42.67	42.73	VN	37	60	NUL	1	2 cm, quartz-carbonate, vuggy vein in clay altered, argillic granodiorite, locally hosting trace pyrite. Vuggs contain euhedral,calcite crystals			
43.40	43.85	VN	37	60	NUL	3	4mm-2 cm, quartz-carbonate veinlets in clay altered, strongly argillic, propylitic granodiorite locally hosting trace pyrite and possily sub-mm sphalerite			
45.53	45.63	VN	37	30	NUL	2	1-3 mm, oxidized, quartz-carbonate veinlets locally hosting hematite and trace pyrite			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
46.20	46.60	VN	37	40	NUL	2	2-4 mm, clay altered, quartz-carboante veinlets in unaltered granodiorite			
47.59	48.37	VN	37	40	NUL	3	3-5 mm, quartz-carbonate veinlets locally hosting trace pyrite in clay altered, weakly potassic granodiorite			
48.14	48.20	VN	37	35	NUL	1	2 cm, quartz-carbonate veinlet in clay altered, potassic granodiorite containining trace , reddish hematite within veinlet			
54.94	55.00	VN	37	40	NUL	1	6 mm, quartz-carbonate veinlet in unaltered granodiorite loaclly hosting trace pyrite. 2 cm, propylitic alteration halo is observed near veinlet			
55.66	56.35	VN	37	40	NUL	2	5-8 mm, brassy yellow carbonate infilled veinlet in pervasively hematite altered granodiorite			
58.00	58.35	GO	34	30	NUL	1	red, hematite altered, gouged brecciated seam intrace potassic granodiorite locally hosting trace disseminated pyrite			
58.80	59.00	VN	37	60	NUL	3	1-4 mm, quartz-carbonate veinlets locally hosting sub-mm pyrite and possibly sphalerite.			
66.40	66.43	GO	34	30	NUL	1	2 cm, dark red, hematite altered, gouged, brecciated seam locally hosting disseminated pyrite. Granodiorite section near contains dark, mafic inclusions and locally hosts possible trace chalcopyrite (brassy yellow, soft) in 1-2 mm, dark grey veinlets (35 degrees TCA)			
69.38	69.41	VN	37	60	NUL	2	4mm-2 cm, quartz-carbonate veinlet in argilic-potassic altered granodiorite			
70.94	70.97	GO	34	80	NUL	1	clay altered, gouged brecciated seamin dark grey, mafic intrusion			
72.06	73.71	VN	37	60	NUL	1	4 mm, quartz carbonate veinlet with weakly potassic alteration halo in unaltered granodiorite.			
75.60	77.00	VN	37	60	NUL	5	1-4 mm, stringer veinlets locally hosting trace pyrite in unaltered granodiorite			
82.75	83.00	VN	37	75	NUL	5	3-7 mm,m quartz-carbonate veinlets locally hosting pyrite, magnetite and trace galena in stronglypropylitic, trace phyllic granodiorite. Light pink rhodocrosite locally infills and microbrecciates pyrite bearing veinlets			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
86.70	87.00	VN	37	40	NUL	3	quartz-carbonate veinlets in weakly potassic-argillic granodiorite			
109.88	110.00	VN	37	30	NUL	1	1 cm, quartz-carbonate veinlet locally hosting pyrite and hematite in unaltered, weakly hematite altered granodiorite			
112.05	112.12	VN	37	55	NUL	1	1 cm, quartz veinlet locally hosting blebby pyrite and trace arsenopyrite			
113.55	113.57	GO	34	80	NUL	1	light brown,clay altered, gouged brecciated seam at contact between dyke intrusions and granodiorite

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
6.09	6.38	FT	42	67	NUL	1	light white to grey fault zone within grey quartz feldspar porphyry dyke. Fault is comprised of clay gouge throughout.			
12.31	12.60	FT	42	55	NUL	1	15cm fault zone found along the contact between granodiorite and quartz feldspar porphyry dyke. Rubbly and fault gouged. QFP dyke has carbonate veining along FW of contact.			
18.71	18.79	BX	34	60	NUL	1	fractured black breccia zone cuttting weakly phyllic altered granodiorite. Breccia has cobble sized clasts of granodiorite within, and hosts minor disseminated pyrite.			
								Py	2	DI
22.60	22.70	FT	42	80	NUL	1	Mineralized clay fault zone hosting pyrite. Disseminated pyrite found along the outer selvedges of the fault zone (granodiorite) for up to 15cm. Gouge is pale grey to orange coloured.			
								Py	7	DI
23.00	23.39	VN	37	50	NUL	3	Faulted vein zone within propylitic to phyllic altered granodiorite. Vein zone consists of pale grey to orange clay gouged veinlets found along the outside of a 3.5m quartz vein that hosts disseminated to blebby pyrite, galena, sphalerite, arsenopyrite and trace sulphosalts(?) (ghost bladed arsenopyrite or sulphosalts)			
								Sp	2	DI
								Gn	5	BL
								As	2	BL
								As	2	BA
								Py	5	BL
23.76	23.84	VB	37	85	NUL	1	8cm carbonate vein breccia cutting weakly phyllic/propylitic altered granodiorite. Minor interstitial quartz is present. Vein breccia hosts trace disseminated pyrite.			
								Py	1	DI
24.00	26.18	VT	37	70	NUL	11	carbonate +- quartz veinlets with trace disseminated pyrite, up to 1 cm wide, cutting phyllic altered granodiorite.			
								Py	3	DI

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
25.35	25.55	VN	37	75	NUL	1	clay gouged, faulted, vein that displays moderate oxidation. Vein hosts blebby pyrite. Granodiorite around the vein/fault zone is siliceous.			
								Py	9	BL
32.70	32.77	VT	37	60	NUL	1	Stacked pyrite stringer zone within siliceous, propylitic altered granodiorite zone that is highly fractured.			
								Py	15	DI
33.01	34.00	VT	37	5	NUL	1	low angle quartz vein cutting unaltered granodiorite. Hosts minor pyrite. Trace epidote found along vein selvedges.			
								Py	2	DI
36.03	36.08	VN	37	70	NUL	1	5cm quartz vein hosting blebby to semi-massive pyrite throughout, cutting unaltered granodioriote that is fractured. Pyrite is locally weathered to orange colour. 1cm propylitic alteration halo found around vein.			
								Py	65	BL
38.60	39.00	VN	37	5	NUL	1	Low angle 2cm quartz vein hosting disseminated pyrite. Vein is hosted in trace propylitic altered granodiorite (dominantly unaltered). Found at the end of highly fractured granodiorite zone.			
41.70	41.73	VN	37	15	NUL	1	Low angle quartz vein hosting disseminated pyrite. Vein is hosted in unaltered to trace propylitic altered granodiorite.			
								Py	3	DI
48.67	48.70	BX	34	60	NUL	1	Brecciated quartz-carbonate vein within propylitic altered granodiorite. Displays net texture.			
65.00	66.00	VT	37	70	NUL	5	Quartz +- carbonate veinletss cutting argillic/proplitic altered granodiorite. Veinlets host disseminated galena, sphalerite, arsenopyite and pyrite. Veins are spaced ~80cm apart, but cut granodiorite in pairs. Net textured and weakly crackle brecciated carbonate stringers and veinlets cut granodiorite around this zone at a low angle (15-30TCA).

See Secondary Structures for more detailed descriptions. Veins appear associated with a large rubbly fault zone found in footwall ~1m below this interval. Fault and gouge zones in the vein zone are likely a feeder structures eminating from this larger structure. Net textured veinlets of carbonate throughout.
26.52	27.43	0.91	GRD	GRD	MG	Unaltered granodiorite found between intense fault zone (footwall) and intense vein zone (hanging wall).
27.43	29.11	1.68	FLT	FLT	MG	Intensely faulted and rubbled fault zone found along the footwall of immense vein zone. Rubbled fault zone consists of broken down pebble sized granodiorite that ranges from moderately oxidized to unaltered.
29.11	30.00	0.89	GRD	GRDA	MG	Argillic to weakly propylitic altered granodiorite found along the contact with light grey/green quartz feldspar porphyry dyke. Contact is slightly gouged with immense clay stringers, but sharp.
30.00	45.00	15.00	QFP	DYK	FG	Fine to medium grained, light grey quartz feldspar porphyry dyke. Dyke has irregular coarser grained feldspar clasts throughout. Minor gouge zones from faults are present within. Lower contact is faulted.
45.00	46.00	1.00	GRD	FLTM	MG	Faulted argilic to propylitic altered granodiorite. Has minor black stringers and quartz carbonate within.
46.00	46.36	0.36	QFP	FLTM	FG	Fine grained light to medium grey quartz feldspar dyke.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
46.36	49.00	2.64	GRD	GRDA	MG	Weakly phyllic to propylitic altered granodiorite found underlying intermixed QFP-GRD transition contact zone. Granodiorite is peppered with fine mm-scale stringers that locally carry disseminated pyrite.
49.00	54.00	5.00	GRD	GRD	MG	Unaltered granodiorite with locally argillic/propylitic altered intrrervals throughout. Quartz stringers and veinlets are present in altered zones that carry polymetallic mineralization.
54.00	56.50	2.50	GRD	GRDM	MG	Moderately siliceous, phyllic to argillic altered granodiorite. Granodiorite has mineralized stringers and veinlets throughout.
56.50	57.26	0.76	VEN	VEIN	--	Moderate to strongly phyllic/argillic altered granodiorite hosting a series of mineralized quartz-carbonate veinlets throughout, along with three main veins (2cm, 8cm, 15cm wide). Veins are comprised of quartz carbonate and are brecciated throughout. Veins host blebby to semi massive pyrite, blebby to disseminated sphalerite, galena and arsenopyrite.
57.26	59.38	2.12	GRD	GRDA	MG	Weakly to moderately propylitic altered granodiorite with narrow carbonate stringers cutting locally. Found a the contact of GRD-QFP.
59.38	85.86	26.48	QFP	DYK	FG	Fine grained light grey quartz feldspar porphyry dyke that transitions in colour to deep grey/purple colour towards end of interval (starting at ~72m).
85.86	95.60	9.74	GRD	GRDA	MG	Alternating zones of argillic and propylitic altered granodiorite found along the lower contact of QFP-GRD. Interval is mineralized with sulphide stringers throughout zones of alteration.
95.60	96.70	1.10	VEN	VEIN	--	Vein zone found within an interval of moderately to strongly argillic altered granodiorite with trace propylitic overprinting. Vein zone is comprised of an upper quartz-carbonate breccia zone (60cm) that hosts disseminated pyrite throughout, followed by a pyrite-arsenopyrite quartz veining throughout the lower interval, up to 10cm.
96.70	102.56	5.86	GRD	GRD	MG	Unaltered granodiorite with minor patchy propylitic alteration.
102.56	103.18	0.62	BXA	VEIN	MG	Quartz-smokey quartz breccia zone hosted within unaltered to weakly propylitic altered granodiorite. Breccia vein consists of carbonate phase that is brecciated by smokey quartz and black breccia material. Minor disseminated pyrite is present throughout.
103.18	124.58	21.40	GRD	GRD	MG	Unaltered granodiorite with sporadic intervals of propylitic alteration within, up o 1.5m. Altered zone at 118.5m has quartz stringers and vuggy quartz carbonate veining
124.58	125.08	0.50	VEN	VEIN	--	Zone of three quartz veins (4-6cm) within srongly phyllic/argillic altered granodiorite. Veins are comprised of quartz and carbonate that are interstitially banded, and host blebby to semi massive pyrite and minor sphalerite.
125.08	134.40	9.32	GRD	GRDA	MG	Alternating argillic/propylitic/unatlered granodiorite with minor carboante and quartz stringers throughou.
134.40	142.25	7.85	GRD	GRD	MG	Unaltered granodiorite.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
142.25	146.70	4.45	GRD	GRDM	MG	Phyllic altered granodiorite with weak argillic overprinting. Granodiorite is mineralized throughout with quartz veins, quartz carbonate breccias and vienlets throughout. Unit is defined by two major veins (144m, 145.50m) that are 24, 10cm respectively.
146.70	149.35	2.65	MAF	DYK	FG	dark grey to black, fine grained mafic dyke. Dyke has narrow white carbonate stringers throughout entire interval.
149.35	153.00	3.65	GRD	GRDM	MG	Propylitic to phyllic altered granodiorite hosting sporadic mineralized quartz and quartz carbonate veins and veinlets throughout. Spaced ~35cm apart.
153.00	155.25	2.25	GRD	GRD	MG	Unaltered granodiorite with minor carbonate stringers.
155.25	169.55	14.30	GRD	GRDA	MG	Alternating intervals of unaltered granodiorite and moderately propylitic to propylitic/argillic altered granodiorite. Altered granodiorite zones typically arry minor quartz or carbonate stringers, but are typically unmineralized. Unaltered and altered intervals are ~1-2m wide on average.
169.55	174.35	4.80	GRD	GRD	MG	Unaltered granodiorite.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
0.00	2.30	2.30	-?-	--	Overburden							
2.30	3.05	0.75	GRD	MG	Unaltered granodiorite with pervasive orange/brown weathering along fracture planes. Interval is fractured and rubbly.							
						MD	BR	FR	OXI	3I		
								RB				
3.05	4.60	1.55	FLT	MG	Orange to red to pale white coloured, intensely gouged and rubbly fault zone within granodiorite unit. Interval consists of pebble and smaller sized clasts of granodiorite, along with strongly oxidized gouge and fractured rock material. No visible sulphides present, but suspected. Fragments of quartz are present within.							
						DK	OR	RB	CLY	5I		
						DK	RD	FR	OXI	5I		
						MD	OR					
4.60	6.90	2.30	GRD	MG	weakly propylitic altered granodiorite with moderate to strongly oxidized overprinting, especially along fractures. Oxidation is pervasive throughout.							
						MD	BR	FR	OXI	3I		
						MD	OR					
6.90	10.65	3.75	VEN	MG	Quartz-carbonate vein zone within pervasively oxidized granodiorite (unable to determine true original alteration, but likely phyllic?). Vein zone consists of two large quartz-carbonate breccia veins with net and crackle breccia textures throughout. Vein breccias host massive pyrite, disseminated galena, arsenopyrite and minor disseminated galena. Carbonate brecciates smokey quartz and quartz seen in veining. Veins run 45 TCA.

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
6.88	6.93	VN	37	67	NUL	1	Massive pyrite vein cutting altered and oxidized granodiorite.			
								Py	100	IN
8.10	8.20	FT	42	-	NUL	1	grey and black gouged clay fault zone with band of semi massive pyrite within (2cm). Pyrite band runs 70TCA			
								Py	13	MA
14.00	14.20	ST		80	NUL	1	hematite filled stringers cutting argillic altered granodiorite.			
19.90	26.52	VT	37	-	NUL	20	Densely mineralized interval of phyllic altered granodiorite with patchy argillic overprinting. Veining consists of a network of smokey grey stringers and veinlets that host an array of sulphides, including pyrite (dominant), arsenopyrite and trace galena and sphalerite. Veinlet network is associated with large vein zones found within this interval (see detailed secondary structure logs within this interval).			
								Py	4	DI
								Sp	1	DI
								Gn	1	DI
								As	2	DI
20.49	20.56	BX	34	-	NUL	1	highly fracture quartz carbonate breccia zone with black breccia present. Minor disseminated pyrite throughout.			
								Py	3	DI
22.90	22.01	VB	37	40	NUL	1	quartz-carbonate-smokey quartz breccia vein hosted in phyllic altered granodiorite. Breccia zone hosts disseminated pyrite throughout.			
								Py	10	DI
24.43	24.70	VN	37	80	NUL	2	Two quartz-smokey quartz veins with banded carbonate within. Hosted in moderately phyllic altered granodiorite. Veins host semi-massive pyrite and fine disseminated pyrite throughout. Microfractures around veins are mineralized with pyrite stringers and clay gouge.			
								Py	35	MA
								As	3	DI

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
25.00	25.40	FT	42	75	NUL	1	clay gouged fault zone within mineralized granodiorite zone. Clay gouge found along fractures, with disseminated pyrite.			
								Py	5	DI
25.45	25.51	VN	37	85	NUL	1	Quartz carbonate vein with pyrite and carbonate stringers eminated from the centre. Hosts disseminated pyrite throughout.			
26.00	26.43	VB	37	80	NUL	1	Breccia vein zone consisting of a 7cm banded carbonate vein (banded ankerite, white carbonate) with colloform/banded textures throughout, and net textured veinlets and stringers of carbonate, quartz and pyrite +- minor arsenopyrite throughout the rest of the interval. Vein zone hosted in phyllic altered granodiorite.			
								As	1	DI
								Py	9	DI
39.00	39.11	BX	34	70	NUL	1	black breccia cutting through light to medium grey QFP dyke.			
39.30	39.50	FT	42	-	NUL	1	intensely clay gouged fault zone found within quartz feldspar porphyry dyke. Contacts are too fractured and gouged to get measurement.			
45.00	45.25	FT	42	-	NUL	1	intensely clay gouged fault zone between QFP dyke and granodiorite.			
45.25	45.46	VT	37	50	NUL	1	net textured zone of quartz and smokey quartz carbonate veining with disseminated pyrite throughout.			
50.10	50.15	VT	37	40	NUL	1	net textured carbonate veins within propyliitic altered granodiorite.			
51.89	51.92	VN	37	50	NUL	1	Quartz vein hosted in unaltered granodiorite hosting blebby pyrite.			
								Py	50	BL
55.15	55.18	VN	37	60	NUL	1	quartz vein hosting blebby, zoned black to honey brown sphalerite, pyrite and minor galena. Found in phyllic to argillic altered granodiorite.			
								Py	3	BL
								Gn	1	BL
								Sp	10	BL

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
86.92	86.94	VN	37	68	NUL	1	2cm quartz vein hosting blebby pyrite, sphalerite and galena throughout. Hosted in unaltered to trace propylitic altered granodiorite.			
								Sp	25	BL
								Py	25	BL
								Gn	25	BL
89.27	89.30	VN	37	40	NUL	1	low angle quartz carbonate vein hosting trace pyrite. Found within argillic/propylitic altered granodiorite.			
								Py	3	DI
102.56	103.18	BX	34	-	NUL	1	black breccia zone found in weakly phyllic to proylitic altered granodiorite. Breccia consists of quartz, carbonate, smokey quartz and clasts of altered granodiorite. Disseminated pyrite is found throughout.			
								Py	6	DI
118.15	118.18	VT	37	50	NUL	1	quartz carbonate stringer hosting disseminated pyrite.			
								Py	6	DI
118.80	119.00	VN	37	-	NUL	1	vuggy carbonate quartz vein hosted in propylitic altered granodiorite. Strongly rubbled so exact width is unknown.			
125.30	125.32	VN	37	70	NUL	1	quartz carbonate veinlet (1cm) with a siliceous propylitic halo (1cm). Hosts disseminated pyrite.			
								Py	8	DI
125.43	125.67	BX	34	30	NUL	1	black breccia with trace disseminated pyrite crosscutting a minor quartz veinlet (70TCA). Breccia and vein host disseminated pyrite.			
								Py	4	DI
131.00	131.06	VN	37	78	NUL	1	black breccia vein hosting disseminaetd pyrite and minor carbonae.			
								Py	4	DI
134.08	134.15	VB	37	65	NUL	1	quartz carbonate breccia vein hosting disseminated pyrite. Hosted in phyllic to unaltered granodiorite. Fault gouge found along footwall side.			
								Py	5	DI

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
143.87	144.10	VN	37	80	NUL	1	Quartz vein zone hosted in strongly phyllic altered granodiorite. Vein is categorized by more of a mineralized quartz flooding than a typical vein. Flooded by siliceous quartz and hosts bands of semi-massive pyrite throughout. Minor gouged microfractures also present.			
								Py	30	MA
145.55	145.73	VB	37	60	NUL	1	quartz carbonate vein zone hosting interstitial quartz that is brecciated by white carbonate. Vein hosts black seams within. Disseminated pyrite is scattered throughout.			
								Py	20	DI
150.00	150.10	VN	37	50	NUL	2	Two narrow smokey quartz carbonate veinlets (1.5cm) found in deep green coloured, propylitic altered granodiorite. Veins host disseminated pyrite within.			
								Py	8	DI
150.67	150.74	VN	37	67	NUL	1	Banded quartz carboante vein hosted in phyllic altered granodiorite. Vein hosts disseminated to blebby pyrite.			
								Py	15	DI
								Py	3	BL
152.23	152.25	BN		68	NUL	1	Band of quartz and carbonate hoste in phyllic altered granodiorite that hosts dissemianted pyrite.			
								Py	8	DI
158.35	158.42	VN	37	60	NUL	0	net textured carbonte vein zone found in propylitic altred granodiorite. No mineralizatoin			
167.80	167.87	VN	37	65	NUL	1	carbonate vein hosted in moderately argillic altered granodiorite that has trace propylitic overprinting. No visible mineralization.			
168.15	168.16	VT	37	65	NUL	1	quartz veinlet cutting moderately argillic altered granodiorite. Minor disseminated to blebby pyrite within.			
								Py	3	BL
