CERTIFICATE WH19273147

Project: Klaza

P.O. No.: 19-R-001

This report is for 1 Rock sample submitted to our lab in Whitehorse, YT, Canada on 29-OCT-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Pb-OG62	Ore Grade Pb - Four Acid	
Zn-OG62	Ore Grade Zn - Four Acid	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE OF ANALYSIS WH19275611

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

REE's may not be totally soluble in this method.
Applies to Method: ME-MS61

LABORATORY ADDRESSES

Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

Applies to Method:				
	BAG-06	CRU-31	CRU-QC	LOG-21
	LOG-21d	LOG-23	PUL-31	PUL-31d
	PUL-QC	SPL-21	SPL-21d	WEI-21

Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Applies to Method:		
	Au-AA24	ME-MS61

CERTIFICATE WH19275613

Project: Klaza

P.O. No.: 19-125

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 31-OCT-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

REE's may not be totally soluble in this method.
Applies to Method: ME-MS61

LABORATORY ADDRESSES

Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

Applies to Method:				
	BAG-06	CRU-31	CRU-QC	LOG-21
	LOG-21d	LOG-23	PUL-31	PUL-31d
	PUL-QC	SPL-21	SPL-21d	WEI-21

Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Applies to Method:		
	Au-AA24	ME-MS61

CERTIFICATE WH19275616

Project: Klaza

P.O. No.: 19-126

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 31-OCT-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE OF ANALYSIS WH19275616

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

REE's may not be totally soluble in this method.
Applies to Method: ME-MS61

LABORATORY ADDRESSES

Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

Applies to Method:				
	BAG-06	CRU-31	CRU-QC	LOG-21
	LOG-21d	LOG-23	PUL-31	PUL-31d
	PUL-QC	SPL-21	SPL-21d	WEI-21

Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Applies to Method:		
	Au-AA24	ME-MS61

CERTIFICATE WH19275619

Project: Klaza

P.O. No.: 19-127

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 31-OCT-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

REE's may not be totally soluble in this method.
Applies to Method: ME-MS61

LABORATORY ADDRESSES

Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

Applies to Method:				
	BAG-06	CRU-31	CRU-QC	LOG-21
	LOG-21d	LOG-23	PUL-31	PUL-31d
	PUL-QC	SPL-21	SPL-21d	WEI-21

Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Applies to Method:		
	Au-AA24	ME-MS61

CERTIFICATE WH19275622

Project: Klaza

P.O. No.: 19-128

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 31-OCT-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

REE's may not be totally soluble in this method.
Applies to Method: ME-MS61

LABORATORY ADDRESSES

Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

Applies to Method:				
	BAG-06	CRU-31	CRU-QC	LOG-21
	LOG-21d	LOG-23	PUL-31	PUL-31d
	PUL-QC	SPL-21	SPL-21d	WEI-21

Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Applies to Method:		
	Au-AA24	ME-MS61

CERTIFICATE WH19275627

Project: Klaza

P.O. No.: 19-129

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 31-OCT-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE OF ANALYSIS WH19275627

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

REE's may not be totally soluble in this method.
Applies to Method: ME-MS61

LABORATORY ADDRESSES

Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

Applies to Method:				
	BAG-06	CRU-31	CRU-QC	LOG-21
	LOG-21d	LOG-23	PUL-31	PUL-31d
	PUL-QC	SPL-21	SPL-21d	WEI-21

Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Applies to Method:		
	Au-AA24	ME-MS61

CERTIFICATE WH19275628

Project: Klaza

P.O. No.: 19-130

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 31-OCT-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE OF ANALYSIS WH19275628

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

REE's may not be totally soluble in this method.
Applies to Method: ME-MS61

LABORATORY ADDRESSES

Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

Applies to Method:				
	BAG-06	CRU-31	CRU-QC	LOG-21
	LOG-21d	LOG-23	PUL-31	PUL-31d
	PUL-QC	SPL-21	SPL-21d	WEI-21

Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Applies to Method:		
	Au-AA24	ME-MS61

CERTIFICATE WH19275636

Project: Klaza

P.O. No.: 19-131

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 31-OCT-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE OF ANALYSIS WH19275636

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

REE's may not be totally soluble in this method.
Applies to Method: ME-MS61

LABORATORY ADDRESSES

Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

Applies to Method:				
	BAG-06	CRU-31	CRU-QC	LOG-21
	LOG-21d	LOG-23	PUL-31	PUL-31d
	PUL-QC	SPL-21	SPL-21d	WEI-21

Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Applies to Method:		
	Au-AA24	ME-MS61

CERTIFICATE WH19275643

Project: Klaza

P.O. No.: 19-132

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 31-OCT-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

REE's may not be totally soluble in this method.
Applies to Method: ME-MS61

LABORATORY ADDRESSES

Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

Applies to Method:				
	BAG-06	CRU-31	CRU-QC	LOG-21
	LOG-21d	LOG-23	PUL-31	PUL-31d
	PUL-QC	SPL-21	SPL-21d	WEI-21

Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Applies to Method:		
	Au-AA24	ME-MS61

CERTIFICATE WH19275644

Project: Klaza

P.O. No.: 19-133

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 31-OCT-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE OF ANALYSIS WH19275644

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

REE's may not be totally soluble in this method.
Applies to Method: ME-MS61

LABORATORY ADDRESSES

Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

Applies to Method:				
	BAG-06	CRU-31	CRU-QC	LOG-21
	LOG-21d	LOG-23	PUL-31	PUL-31d
	PUL-QC	SPL-21	SPL-21d	WEI-21

Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Applies to Method:		
	Au-AA24	ME-MS61

CERTIFICATE WH19275645

Project: Klaza

P.O. No.: 19-134

This report is for 29 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 31-OCT-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE OF ANALYSIS WH19275645

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

Applies to Method: REE's may not be totally soluble in this method.
ME-MS61

LABORATORY ADDRESSES

Applies to Method: Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

BAG-06	CRU-31	CRU-QC	LOG-21
LOG-23	PUL-31	PUL-QC	SPL-21
WEI-21			

Applies to Method: Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Au-AA24	ME-MS61

CERTIFICATE WH19275646

Project: Klaza

P.O. No.: 19-135

This report is for 39 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 31-OCT-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE OF ANALYSIS WH19275646

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

REE's may not be totally soluble in this method.
Applies to Method: ME-MS61

LABORATORY ADDRESSES

Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

Applies to Method:				
	BAG-06	CRU-31	CRU-QC	LOG-21
	LOG-21d	LOG-23	PUL-31	PUL-31d
	PUL-QC	SPL-21	SPL-21d	WEI-21

Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Applies to Method:		
	Au-AA24	ME-MS61

CERTIFICATE WH19275648

Project: Klaza

P.O. No.: 19-136

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 31-OCT-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

REE's may not be totally soluble in this method.
Applies to Method: ME-MS61

LABORATORY ADDRESSES

Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

Applies to Method:				
	BAG-06	CRU-31	CRU-QC	LOG-21
	LOG-21d	LOG-23	PUL-31	PUL-31d
	PUL-QC	SPL-21	SPL-21d	WEI-21

Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Applies to Method:		
	Au-AA24	ME-MS61

CERTIFICATE WH19275649

Project: Klaza

P.O. No.: 19-137

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 31-OCT-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

REE's may not be totally soluble in this method.
Applies to Method: ME-MS61

LABORATORY ADDRESSES

Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

Applies to Method:				
	BAG-06	CRU-31	CRU-QC	LOG-21
	LOG-21d	LOG-23	PUL-31	PUL-31d
	PUL-QC	SPL-21	SPL-21d	WEI-21

Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Applies to Method:		
	Au-AA24	ME-MS61

CERTIFICATE WH19275650

Project: Klaza

P.O. No.: 19-138

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 31-OCT-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE OF ANALYSIS WH19275650

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

REE's may not be totally soluble in this method.
Applies to Method: ME-MS61

LABORATORY ADDRESSES

Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

Applies to Method:				
	BAG-06	CRU-31	CRU-QC	LOG-21
	LOG-21d	LOG-23	PUL-31	PUL-31d
	PUL-QC	SPL-21	SPL-21d	WEI-21

Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Applies to Method:		
	Au-AA24	ME-MS61

CERTIFICATE WH19279919

Project: Klaza

P.O. No.: 19-139

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 5-NOV-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

REE's may not be totally soluble in this method.
Applies to Method: ME-MS61

LABORATORY ADDRESSES

Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

Applies to Method:				
	BAG-06	CRU-31	CRU-QC	LOG-21
	LOG-21d	LOG-23	PUL-31	PUL-31d
	PUL-QC	SPL-21	SPL-21d	WEI-21

Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Applies to Method:		
	Au-AA24	ME-MS61

CERTIFICATE WH19279929

Project: Klaza

P.O. No.: 19-140

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 5-NOV-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE OF ANALYSIS WH19279929

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

REE's may not be totally soluble in this method.
Applies to Method: ME-MS61

LABORATORY ADDRESSES

Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

Applies to Method:				
	BAG-06	CRU-31	CRU-QC	LOG-21
	LOG-21d	LOG-23	PUL-31	PUL-31d
	PUL-QC	SPL-21	SPL-21d	WEI-21

Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Applies to Method:		
	Au-AA24	ME-MS61

CERTIFICATE WH19279933

Project: Klaza

P.O. No.: 19-141

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 5-NOV-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE OF ANALYSIS WH19279933

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

REE's may not be totally soluble in this method.
Applies to Method: ME-MS61

LABORATORY ADDRESSES

Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

Applies to Method:				
	BAG-06	CRU-31	CRU-QC	LOG-21
	LOG-21d	LOG-23	PUL-31	PUL-31d
	PUL-QC	SPL-21	SPL-21d	WEI-21

Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Applies to Method:		
	Au-AA24	ME-MS61

CERTIFICATE WH19279937

Project: Klaza

P.O. No.: 19-142

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 5-NOV-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE OF ANALYSIS WH19279937

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

REE's may not be totally soluble in this method.
Applies to Method: ME-MS61

LABORATORY ADDRESSES

Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

Applies to Method:				
	BAG-06	CRU-31	CRU-QC	LOG-21
	LOG-21d	LOG-23	PUL-31	PUL-31d
	PUL-QC	SPL-21	SPL-21d	WEI-21

Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Applies to Method:		
	Au-AA24	ME-MS61

CERTIFICATE WH19279938

Project: Klaza

P.O. No.: 19-143

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 5-NOV-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE OF ANALYSIS WH19279938

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

REE's may not be totally soluble in this method.
Applies to Method: ME-MS61

LABORATORY ADDRESSES

Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

Applies to Method:				
	BAG-06	CRU-31	CRU-QC	LOG-21
	LOG-21d	LOG-23	PUL-31	PUL-31d
	PUL-QC	SPL-21	SPL-21d	WEI-21

Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Applies to Method:		
	Au-AA24	ME-MS61

CERTIFICATE WH19279942

Project: Klaza

P.O. No.: 19-144

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 5-NOV-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

REE's may not be totally soluble in this method.
Applies to Method: ME-MS61

LABORATORY ADDRESSES

Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

Applies to Method:				
	BAG-06	CRU-31	CRU-QC	LOG-21
	LOG-21d	LOG-23	PUL-31	PUL-31d
	PUL-QC	SPL-21	SPL-21d	WEI-21

Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Applies to Method:		
	Au-AA24	ME-MS61

CERTIFICATE WH19279948

Project: Klaza

P.O. No.: 19-145

This report is for 32 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 5-NOV-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
ME-MS61	48 element four acid ICP-MS	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE WH19300083

Project: ROCKHA_WH19255822

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 26-NOV-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
FND-02	Find Sample for Addn Analysis

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Au-GRA22	Au 50 g FA-GRAV finish	WST-SIM

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE WH19300240

Project: ROCKHA_ WH19255824

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 26-NOV-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
FND-02	Find Sample for Addn Analysis

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
Pb-OG62	Ore Grade Pb - Four Acid	
ME-MS61	48 element four acid ICP-MS	
Ag-OG62	Ore Grade Ag - Four Acid	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE WH19300245

Project: ROCKHA_ WH19255791

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 26-NOV-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
FND-02	Find Sample for Addn Analysis

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION
ME-MS61	48 element four acid ICP-MS

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE OF ANALYSIS WH19300245

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

Applies to Method: REE's may not be totally soluble in this method.
ME-MS61

LABORATORY ADDRESSES

Applies to Method: Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

CERTIFICATE WH19300252

Project: ROCKHA_ WH19255805

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 26-NOV-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
FND-02	Find Sample for Addn Analysis

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	
Pb-OG62	Ore Grade Pb - Four Acid	
ME-MS61	48 element four acid ICP-MS	
Ag-OG62	Ore Grade Ag - Four Acid	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

Project: Klaza

P.O. No.: 19-001

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 16-SEP-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Ag-OG62	Ore Grade Ag - Four Acid	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Pb-OG62	Ore Grade Pb - Four Acid	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE OF ANALYSIS WH19231869

CERTIFICATE COMMENTS

ANALYTICAL COMMENTS

Applies to Method: REE's may not be totally soluble in this method.
ME-MS61

LABORATORY ADDRESSES

Applies to Method: Processed at ALS Whitehorse located at 78 Mt. Sima Rd, Whitehorse, YT, Canada.

BAG-06	CRU-31	CRU-QC	LOG-21
LOG-21d	LOG-23	PUL-31	PUL-31d
PUL-QC	SPL-21	SPL-21d	WEI-21

Applies to Method: Processed at ALS Vancouver located at 2103 Dollarton Hwy, North Vancouver, BC, Canada.

Ag-OG62	Au-AA24	ME-MS61	ME-OG62
Pb-OG62

CERTIFICATE WH19231872

Project: Klaza

P.O. No.: 19-002

This report is for 40 Drill Core samples submitted to our lab in Whitehorse, YT, Canada on 16-SEP-2019.

The following have access to data associated with this certificate:

ANDREW CARNE	MATT DUMALA	

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
BAG-06	Double Bagging Coarse Rejects
LOG-21	Sample logging - ClientBarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize up to 250g 85% <75 um
LOG-23	Pulp Login - Rcvd with Barcode
LOG-21d	Sample logging - ClientBarCode Dup
SPL-21d	Split sample - duplicate
PUL-31d	Pulverize Split - duplicate

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
Au-AA24	Au 50g FA AA finish	AAS
Au-GRA22	Au 50 g FA-GRAV finish	WST-SIM
Ag-OG62	Ore Grade Ag - Four Acid	
ME-MS61	48 element four acid ICP-MS	
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Pb-OG62	Ore Grade Pb - Four Acid	

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

APPENDIX V

ROCK SAMPLE DESCRIPTIONS

Rock Sample Descriptions Property: Klaza

Sample Number:	S052450	Date Collected:	2019-06-07	UTM:	382690	mE	Nad83, Zone 8
Elevation:	m	Sampler:	Kelson Willms	UTM:	6888724	mN	

Comments: Composite sample of vein and mineralized alteration halo. Disseminated galena, sphalerite, pyrite and arsenopyrite in siliceous rock that displays boiling textures.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
18.90	26.63	7.73	GRD	MG	relatively unaltered interval of granodiorite containing trace amounts of chlorite clasts and exhibiting moderate oxidation along fractures and joint surfaces. Trace amounts of mm-pyrite blebs is locally observed in think mm-smoky quartz veinlets.							
						MD	GY		PRO	1I	Py	1
						LT	GY				Qz	1
26.63	27.85	1.22	GRD	MG	xd							
27.85	31.36	3.51	GRD	MG	Granodiorite exhibiting weak propylitic alteration and contains cm sized red/pink aplite intrusions. Minor chlorite clasts are locally observed through interval. Pyrite blebs are locally observed within cm-sized milky and smoky quarts veins throughout unit. Cm-sized, irregular, volcanic (?), fine grained clasts are commonly occuring in granodiorite interval.							
									PRO	2I	Py	2
31.36	34.10	2.74	GRD	MG	granodiorite interval exhibiting phyllic alteration which overprints exsisting weak argillic alteration locally (interval appears moderately silicified, feldspathic clasts are greenish and pyrite disseminations are locally observed in host granodiorite).Phyllic alteration becomes more prominent near granodiorite-dyke contact in lower interval section. Cm-sized banded pyrite is contained within milky quartz veins locally. Orange/tan clay oxidation is commonly occuring along fracture and joint surfaces.							
						LT	GN		PHC	3I	Py	3
						LT	BG		ARG	2I	Py	3
34.10	34.78	0.68	QFP	FG	Polymictic dyke intrusion containing sub-angular feldspathic, and dark, mm-sized clasts. Near contact between granodiorite and dyke intrusion sub-mm , black tourmalline crystals are locally observed in granodiorite proximal to dyke intrusion.							
34.78	36.10	1.32	SIL	MG	Matrix in dyke intrusion becomes darker, is medium grained and contains more light, sub-angular, feldspathic clasts.							
						MD	GY					

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
36.10	38.10	2.00	SIL	MG	lower portion of dyke section is fractured, locally brecciated and exhibits a small brecciated gouge seam @ 38.05m							
						DK	GY	BX				
38.10	41.79	3.69	GRD	MG	Granodiorite exhibiting moderate phyllic alteration. Interval is moderately silicified, contains traces of fine grained disseminated pyrite. Pyrite is also observed in mm-sized, oxidized smoky quartz veinlets (i.e.40.10m)							
						MD	GY				Py	2
						LT	GN		PHC	3I	Qz	1
41.79	42.08	0.29	VEN	--	pyrite rich vein zone contained within granodiorite unit exhibiting moderate oxidation along veinlets. Vein appears brecciated @ 41.95m. Pyrite in vein is blebby (3mm-1 cm) and appears to be crosscut by thin, oxidized smoky quartz (?) veinlets. Low to moderate oxidation is observed in feldspathic clasts.							
						MD	BN	BX	OXI	3I	Py	2
						MD	GN					
						MD	BN					
42.08	44.45	2.37	GRD	MG	Granodiorite exhibiting local zones of weak argillic alteration with minor propylitic and phyllic overprint (minor chlorite clasts observed, weakly to moderately silicified granodiorite zones containing trace fine disseminated pyrite in host rock. Pyrite is locally observed in mm-sized quartz and smoky quartz veinlets

									PRO	1I		

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
44.45	49.64	5.19	GRD	MG	Granodiorite interval with local zones of gougy, clay oxidation. Weak argillic alteration zones are locally observed with phyllic and propylitic overprint. (moderately silicified, fine grained pyrite disseminations more prevalent in phyllic altered zones; clear basal cleavage, soft grains are observed as well (muscovite)) . Minor chlorite clasts are present in granodiorite unit and local zones of swelled up feldspathic clasts are light green and do not commonly exhibit chlorite cores surrounded by feldspathic grains. Trace chlorite clasts are locally observed near pyrite bearing mm-sized quartz veins (i.e. 46.15m). Iron staining and light brown clay oxidation are observed along fractures, joint surfaces and in some feldspathic clasts in granodiorite unit. Disseminated pyrite is locally observed in mm-sized quartz veins.							
						MD	GY		PRO	1I	Py	2
						MD	TN		ARG	2I	Py	3
						LT	GN		PHC	3I		
49.64	49.89	0.25	GRD	MG	Granodiorite interval containing chlorite clasts and quartz clasts observed proximal to pyrite bearing quartz veinlets (i.e. 44.78m). Chlorite clasts are more prominent than previous interval (stronger propylitic signature (?)							
						MD	GN		PRO	3I	Py	1
						MD	GY					
						LT	GY					
49.89	54.31	4.42	GRD	MG	Relatively unaltered granodiorite interval with local zones of argillic alteration and weak propylitic overprint (trace chloritized clasts locally observed through interval. Aplite dyke intrusion occurs at 53.34m. Oxidized, gougy zones of weak argillic alteration are present @ 50.96m,51.42 and 51.62. Trace pyrite disseminations are present in granodiorite interval. Blebby pyrite 51.04 m is observed near quartz clasts. Section from 50.87-51.04 appears silicified, and contains disseminated pyrite (weak phyllic alteration overprinted by argillic and propylitic alteration(?).

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
72.51	78.88	6.37	GRD	MG	Granodiorite exhibiting local zones of weak argillic alteration with minor propylitic and phyllic overprint (minor chlorite clasts observed, weakly to moderately silicified granodiorite zones containing trace fine disseminated pyrite in host rock. Pyrite is locally observed in mm-sized quartz and smoky quartz veinlets							
78.88	81.47	2.59	GRD	MG	Weakly to moderately argillic granodiorite overprinting weak propylitic alteration. Brecciated section is observed @ 80.50m where quartz vein brecciates clasts in host grd. Locally fracture zones are commonly observed throughout interval. Trace mm-blebby pyrite is commonly observed in interval as well							
81.47	83.09	1.62	GRD	MG	Weakly argillic granodiorite interval and trace propylitic alteration (less argillic than previous interval). Aplite dyke occurs @ 83.26m. Trace, pyrite blebs and bands within a dark, fine grained, vein and within grd host are also observed.							
83.09	89.31	6.22	GRD	MG	Relatively unaltered granodiorite with intermittent zones of weak propylitic alteration. Molybdenite crystals are observed @ 84.23 within a quartz vein. Mm-pyrite blebs also occur within quartz veins and within dark, fine grained veinlets and within unaltered grd sections (sporadically observed trace pyrite in grd)							
89.31	92.59	3.28	GRD	MG	Granodiorite exhibiting weak to moderate phyllic alteration. Interval contains increased pyrite located in quartz stringer veins. Interval appears moderately silicified, contains basal cleavage muscovite crystals and increased quartz clasts).							
92.59	96.90	4.31	GRD	MG	Granodiorite with moderate argillic alteration overprinting trace propylitic alteration. Pyrite bearing stringer veins are more abundant on interval and minor vein brecciation is locally observed @ 96.25							
96.90	97.79	0.89	GRD	MG	weakly argillic, trace phyllic granodiorite interval (i.e. 97.32).							

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
97.79	98.92	1.13	GRD	MG	granodiorite exhibiting weak argillic alteration in upper section of interval (97.90-98.50m). Trace chlorite clasts are observed throughout upper part of interval. From 98.50m proximal to vein contact alteration becomes predominantly phyllic (hanging wall alteration(?))							
98.92	99.75	0.83	VEN	MG	quartz vein zone intruding into weakly phllic/argillic granodiorite (stronger phyllic overprint). Unit is comprised of 3 veins (15cm,12cm,11cm).@ 99m contains massive pyrite associated with milky quartz veins which appear to be brecciated by smoky quartz veins. Trace pyrite is observed in some smoky quartz veins. Carbonitic infill intruding into quartz vein is locally observed (ankerite sometimes surrounding smaller quartz clasts). In second vein semi massive pyrite is observed in both milky quartz and smoky quartz . Disseminated pyrite is also observed in host rock. Third vein contains massive pyrite associated with milky quartz with minor smoky quartz filling tbe pyrite quartz interstices. Ankerite is observed in vein and appears to be weakly oxidized. Euhedral, cubic pyrite crystals occur along fracture surfaces.							
99.75	101.92	2.17	GRD	MG	vein footwall altered granodiorite. Weak phyllic alteration overprinting weak argillic. Pyrite is observed in milky and smoky quartz games. Ankerite vein @ 101.04 is observed near pyrite bearing smoky quartz veins.							
101.92	102.57	0.65	GRD	MG	granodiorite exhibiting moderate phyllic alteration. Blebby and disseminated pyrite is observed within smoky quartz veins. Carbonitic veinlets crosscut pyrite bearing quartz veins locally.@ 102.15 quartz vein appears to brecciate host grd. Rubbly, fractured zone occurs @ 102.40m							
102.57	104.55	1.98	GRD	MG	weakly argillic, propylitic , trace phyllic altered granodiorite. Phyllic alteration is less prominent than previous interval. 2-cm aplite dyke intrusion is observed @ 102.75m. Section from 103.12-103.65 exhibits phyllic alteration with pyrite bearing 2-4mm stringer quartz veins.							

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
104.55	107.44	2.89	GRD	MG	relatively unaltered granodiorite with intermittent zones weak argillic, trace propylitic alteration. Trace pyrite bearing quartz veins are locally observed. @ 107.18m aplite dyke intrusion is observed. Small gougy zone occurs at 106.97							
107.44	111.00	3.56	GRD	MG	granodiorite interval with weak phyllic alteration overprinting trace argillic and propylitic alteration. (disseminated pyrite observed, increased quartz clasts, basal cleavage muscovite).							
111.00	120.40	9.40	GRD	MG	relatively unaltered granodiorite with intermitten zones of weak propylitic alteration overprinting zones of trace phyllic alteration. Pyrite bearing smoky quartz veins are locally observed throughout interval. local zones of increased propylitic overprint contain increased chlorite clasts. Aplite dyke intrusion is observeed @ 114.43m. Trace diseminated pyrite is also observed in host grd.							
120.40	122.10	1.70	GRD	MG	weakly argillic granodiorite with intermittent zones of weak propylitic alterationl pyrite bearing smoky quartz veins are locally observd. Trace , molybdenite crystals in quartz veins in argillized zone are observed (i.e. 120.76-80m).							
122.10	127.00	4.90	GRD	MG	granodiorite with intermittent zones of weakly propylitic and trace phyllic alteration. Pyrite bearing smoky quartz veins are observed in interval. Zone of increased propylitic alteration observed from 121-121.30							
127.00	134.11	7.11	GRD	MG	granodiorite with intermittent zones of weak argillic , trace propylitic alteration. Quartz,coloform banding occurs @ 127.96m.(milky quartz and carbonitic bands forming coloform band). Pyrite bearing smoky quartz veins are locally observed throughout interval. small gougy zones occurs @ 133.90m							

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
0.00	0.84	0.84	CAS	---	--	casing
0.84	3.10	2.26	OVB	OVB	--	ovb
3.10	6.10	3.00	SIL	DYK	FG	fine grained, moderately oxidized brecciated clay gouge. Quartz veins appear to brecciate host rock. Brecciation and fracturing and gougy seams may be indicative of faulting (?).
6.10	8.70	2.60	CLY	VEIN	VF	oxidized gougy vein interval, interior of gougy vein is light/dark gray and appears harder than regular clay gougy seams
8.70	12.90	4.20	GRD	GRD	MG	Highly fractured, moderately oxidized granodiorite. Argillic alteration appears to overprint phyllic alteration (swelling of feldspathic clasts is commonly occurring). 1-2mm euhedral pyrite crystals are locally observed along quartz veins with trace disseminated pyrite obsered within host rock.Red, oxidized mm-sized veinlets are commonly oxidized through interval
12.90	18.90	6.00	GRD	GRDA	MG	Moderately oxidized granodiorite interval. Granodiorite exhibits localized sections of weak phyllic alteration which appear to overprint local zones of argillic alteration. (i.e.17.25m). Mm to 1 cm blebby and disseminated pyrite is locally observed within milky quartz veins (i.e. 17.31m).3 cm brecciated clay goyge is observed at 15.90m. Fractured, rubbly zone is present at 18.29m.
18.90	26.63	7.73	GRD	GRD	MG	relatively unaltered interval of granodiorite containing trace amounts of chlorite clasts and exhibiting moderate oxidation along fractures and joint surfaces. Trace amounts of mm-pyrite blebs is locally observed in think mm-smoky quartz veinlets.
26.63	27.85	1.22	GRD	GRD	MG	xd
27.85	31.36	3.51	GRD	GRD	MG	Granodiorite exhibiting weak propylitic alteration and contains cm sized red/pink aplite intrusions. Minor chlorite clasts are locally observed through interval. Pyrite blebs are locally observed within cm-sized milky and smoky quarts veins throughout unit. Cm-sized, irregular, volcanic (?), fine grained clasts are commonly occuring in granodiorite interval.
31.36	34.10	2.74	GRD	GRD	MG	granodiorite interval exhibiting phyllic alteration which overprints exsisting weak argillic alteration locally (interval appears moderately silicified, feldspathic clasts are greenish and pyrite disseminations are locally observed in host granodiorite).Phyllic alteration becomes more prominent near granodiorite-dyke contact in lower interval section. Cm-sized banded pyrite is contained within milky quartz veins locally. Orange/tan clay oxidation is commonly occuring along fracture and joint surfaces.
34.10	34.78	0.68	QFP	DYK	FG	Polymictic dyke intrusion containing sub-angular feldspathic, and dark, mm-sized clasts. Near contact between granodiorite and dyke intrusion sub-mm , black tourmalline crystals are locally observed in granodiorite proximal to dyke intrusion.
34.78	36.10	1.32	SIL	DYK	MG	Matrix in dyke intrusion becomes darker, is medium grained and contains more light, sub-angular, feldspathic clasts.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
36.10	38.10	2.00	SIL	DYK	MG	lower portion of dyke section is fractured, locally brecciated and exhibits a small brecciated gouge seam @ 38.05m
38.10	41.79	3.69	GRD	GRDA	MG	Granodiorite exhibiting moderate phyllic alteration. Interval is moderately silicified, contains traces of fine grained disseminated pyrite. Pyrite is also observed in mm-sized, oxidized smoky quartz veinlets (i.e.40.10m)
41.79	42.08	0.29	VEN	VEIN	--	pyrite rich vein zone contained within granodiorite unit exhibiting moderate oxidation along veinlets. Vein appears brecciated @ 41.95m. Pyrite in vein is blebby (3mm-1 cm) and appears to be crosscut by thin, oxidized smoky quartz (?) veinlets. Low to moderate oxidation is observed in feldspathic clasts.
42.08	44.45	2.37	GRD	GRDA	MG	Granodiorite exhibiting local zones of weak argillic alteration with minor propylitic and phyllic overprint (minor chlorite clasts observed, weakly to moderately silicified granodiorite zones containing trace fine disseminated pyrite in host rock. Pyrite is locally observed in mm-sized quartz and smoky quartz veinlets
44.45	49.64	5.19	GRD	GRDA	MG	Granodiorite interval with local zones of gougy, clay oxidation. Weak argillic alteration zones are locally observed with phyllic and propylitic overprint. (moderately silicified, fine grained pyrite disseminations more prevalent in phyllic altered zones; clear basal cleavage, soft grains are observed as well (muscovite)) . Minor chlorite clasts are present in granodiorite unit and local zones of swelled up feldspathic clasts are light green and do not commonly exhibit chlorite cores surrounded by feldspathic grains. Trace chlorite clasts are locally observed near pyrite bearing mm-sized quartz veins (i.e. 46.15m). Iron staining and light brown clay oxidation are observed along fractures, joint surfaces and in some feldspathic clasts in granodiorite unit. Disseminated pyrite is locally observed in mm-sized quartz veins.
49.64	49.89	0.25	GRD	GRDA	MG	Granodiorite interval containing chlorite clasts and quartz clasts observed proximal to pyrite bearing quartz veinlets (i.e. 44.78m). Chlorite clasts are more prominent than previous interval (stronger propylitic signature (?)
49.89	54.31	4.42	GRD	GRDA	MG	Relatively unaltered granodiorite interval with local zones of argillic alteration and weak propylitic overprint (trace chloritized clasts locally observed through interval. Aplite dyke intrusion occurs at 53.34m. Oxidized, gougy zones of weak argillic alteration are present @ 50.96m,51.42 and 51.62. Trace pyrite disseminations are present in granodiorite interval. Blebby pyrite 51.04 m is observed near quartz clasts. Section from 50.87-51.04 appears silicified, and contains disseminated pyrite (weak phyllic alteration overprinted by argillic and propylitic alteration(?).
54.31	54.56	0.25	GRD	GRDA	MG	Granodiorite interval exhibiting weak propylitic alteration and possibly overprinting trace phyllic alteration. Chlorite clasts are locally observed in granodiorite unit. Quartz clasts and trace mm-pyrite crystals are locally observed within granodiorite clasts.
54.56	57.43	2.87	GRD	GRDA	MG	Relatively unaltered granodiorite interval containing mm-sized pyrite and fine grained disseminated pyrite within mm-sized quartz veins. Trace chlorite clasts are observed in interval (i.e. 55.20). Trace propylitic alteration (?)

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
57.43	57.62	0.19	GRD	GRDA	MG	Moderately oxidized, gougy section of granodiorite exhibiting swelling of feldspathic clasts (weak to moderate argillic alteration). Swelled feldspathic clasts are not zoned and are white.
57.62	59.63	2.01	GRD	GRDA	MG	Granodiorite unit with traces of weak argillic alteration (i.e. 58.32; locally swelled white feldspathic clasts). Trace mm-pyrite is locally observed within dark, fine grained, smoky quartz veinlets.
59.63	60.40	0.77	GRD	GRDA	MG	Granodiorite interval exhibiting weak propylitic alteration overprinted by argillic alteration (chlorite clasts locally observed @ 59.73m in upper interval zone. Lower interval section becomes prodominantly argillic altered (toward 60.40m; clorite is less abundant, white swelled feldspathic clasts are prominent. Trace disseminated pyrite and pyrite blebs are locally observed within mm-sized quartz veinlets.
60.40	61.06	0.66	GRD	GRDA	MG	Granodiorite exhibiting moderate argillic alteration overprinting trace propylitic alteration (chlorite zoning infeldspathic clasts. Lower section of interval contains more chlorite and argillic alteration becomes less - prominent (i.e. 60.70-61m). Trace pyrite is observed in section of trace propylitic alteration.
61.06	61.50	0.44	GRD	GRDA	MG	highlyfractured, moderately-oxidized,rubbly section of granodiorite
61.50	63.23	1.73	GRD	GRDA	MG	Relatively unaltered granodiorite containing reddish/pink, fine grained aplite intrusions. Irregulat 2-6 cm, dark, fine grained, clastic inclusions are locally observed in interval (Clasts are magnetic). Mm-sized pyrite disseminationg and blebs are locally observed within dark, fine grained veinlets (smoky quartz (?)).
63.23	64.15	0.92	GRD	GRDA	MG	Granodiorite unit containing mm-sized chlorite, quartz, blebby and disseminated pyrite in smoky quartz veins within granodiorite host rock. (i.e. 63.98m)(Weak propylitic alteration overprinting trace phyllic (?))
64.15	72.51	8.36	GRD	GRDA	MG	Granodiorite unit with local zones of weak argillic and propylitic alteration (minor swelling of feldspathic clasts in proximity to mm-sized veinlets. Trace chlorite clasts, mm-sized pyrite blebs and disseminationg are locally observed within veinlets (smoky quartz (?)). 5 cm pyrite ithin smoky quartz vein is observed @ 70.70m. From 70.71-70.90 interval appears to have stronger propylitic overprint (increased chloritization of clasts, trace disseminated pyrite observed in granodiorite in local zone of propylitic alteration
72.51	78.88	6.37	GRD	GRDA	MG	Granodiorite exhibiting local zones of weak argillic alteration with minor propylitic and phyllic overprint (minor chlorite clasts observed, weakly to moderately silicified granodiorite zones containing trace fine disseminated pyrite in host rock. Pyrite is locally observed in mm-sized quartz and smoky quartz veinlets
78.88	81.47	2.59	GRD	GRDA	MG	Weakly to moderately argillic granodiorite overprinting weak propylitic alteration. Brecciated section is observed @ 80.50m where quartz vein brecciates clasts in host grd. Locally fracture zones are commonly observed throughout interval. Trace mm-blebby pyrite is commonly observed in interval as well

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
81.47	83.09	1.62	GRD	GRD	MG	Weakly argillic granodiorite interval and trace propylitic alteration (less argillic than previous interval). Aplite dyke occurs @ 83.26m. Trace, pyrite blebs and bands within a dark, fine grained, vein and within grd host are also observed.
83.09	89.31	6.22	GRD	GRD	MG	Relatively unaltered granodiorite with intermittent zones of weak propylitic alteration. Molybdenite crystals are observed @ 84.23 within a quartz vein. Mm-pyrite blebs also occur within quartz veins and within dark, fine grained veinlets and within unaltered grd sections (sporadically observed trace pyrite in grd)
89.31	92.59	3.28	GRD	GRDA	MG	Granodiorite exhibiting weak to moderate phyllic alteration. Interval contains increased pyrite located in quartz stringer veins. Interval appears moderately silicified, contains basal cleavage muscovite crystals and increased quartz clasts).
92.59	96.90	4.31	GRD	GRDA	MG	Granodiorite with moderate argillic alteration overprinting trace propylitic alteration. Pyrite bearing stringer veins are more abundant on interval and minor vein brecciation is locally observed @ 96.25
96.90	97.79	0.89	GRD	GRDA	MG	weakly argillic, trace phyllic granodiorite interval (i.e. 97.32).
97.79	98.92	1.13	GRD	GRDA	MG	granodiorite exhibiting weak argillic alteration in upper section of interval (97.90-98.50m). Trace chlorite clasts are observed throughout upper part of interval. From 98.50m proximal to vein contact alteration becomes predominantly phyllic (hanging wall alteration(?))
98.92	99.75	0.83	VEN	VEIN	MG	quartz vein zone intruding into weakly phllic/argillic granodiorite (stronger phyllic overprint). Unit is comprised of 3 veins (15cm,12cm,11cm).@ 99m contains massive pyrite associated with milky quartz veins which appear to be brecciated by smoky quartz veins. Trace pyrite is observed in some smoky quartz veins. Carbonitic infill intruding into quartz vein is locally observed (ankerite sometimes surrounding smaller quartz clasts). In second vein semi massive pyrite is observed in both milky quartz and smoky quartz . Disseminated pyrite is also observed in host rock. Third vein contains massive pyrite associated with milky quartz with minor smoky quartz filling tbe pyrite quartz interstices. Ankerite is observed in vein and appears to be weakly oxidized. Euhedral, cubic pyrite crystals occur along fracture surfaces.
99.75	101.92	2.17	GRD	GRDA	MG	vein footwall altered granodiorite. Weak phyllic alteration overprinting weak argillic. Pyrite is observed in milky and smoky quartz games. Ankerite vein @ 101.04 is observed near pyrite bearing smoky quartz veins.
101.92	102.57	0.65	GRD	GRDA	MG	granodiorite exhibiting moderate phyllic alteration. Blebby and disseminated pyrite is observed within smoky quartz veins. Carbonitic veinlets crosscut pyrite bearing quartz veins locally.@ 102.15 quartz vein appears to brecciate host grd. Rubbly, fractured zone occurs @ 102.40m
102.57	104.55	1.98	GRD	GRDA	MG	weakly argillic, propylitic , trace phyllic altered granodiorite. Phyllic alteration is less prominent than previous interval. 2-cm aplite dyke intrusion is observed @ 102.75m. Section from 103.12-103.65 exhibits phyllic alteration with pyrite bearing 2-4mm stringer quartz veins.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
104.55	107.44	2.89	GRD	GRD	MG	relatively unaltered granodiorite with intermittent zones weak argillic, trace propylitic alteration. Trace pyrite bearing quartz veins are locally observed. @ 107.18m aplite dyke intrusion is observed. Small gougy zone occurs at 106.97
107.44	111.00	3.56	GRD	GRD	MG	granodiorite interval with weak phyllic alteration overprinting trace argillic and propylitic alteration. (disseminated pyrite observed, increased quartz clasts, basal cleavage muscovite).
111.00	120.40	9.40	GRD	GRD	MG	relatively unaltered granodiorite with intermitten zones of weak propylitic alteration overprinting zones of trace phyllic alteration. Pyrite bearing smoky quartz veins are locally observed throughout interval. local zones of increased propylitic overprint contain increased chlorite clasts. Aplite dyke intrusion is observeed @ 114.43m. Trace diseminated pyrite is also observed in host grd.
120.40	122.10	1.70	GRD	GRD	MG	weakly argillic granodiorite with intermittent zones of weak propylitic alterationl pyrite bearing smoky quartz veins are locally observd. Trace , molybdenite crystals in quartz veins in argillized zone are observed (i.e. 120.76-80m).
122.10	127.00	4.90	GRD	GRD	MG	granodiorite with intermittent zones of weakly propylitic and trace phyllic alteration. Pyrite bearing smoky quartz veins are observed in interval. Zone of increased propylitic alteration observed from 121-121.30
127.00	134.11	7.11	GRD	GRD	MG	granodiorite with intermittent zones of weak argillic , trace propylitic alteration. Quartz,coloform banding occurs @ 127.96m.(milky quartz and carbonitic bands forming coloform band). Pyrite bearing smoky quartz veins are locally observed throughout interval. small gougy zones occurs @ 133.90m

96.90	98.92	2.02	GRD	MG	weakly argillic granodiorite interval with trace phyllic alteration (i.e. 97.32m)							
98.92	99.75	0.83	VEN	MG	Mineralized quartz vein zone in granodiorite unit. Veins are observed within phyllic/argillic altered granodiorite. Veins are 20,15,14 cm in size and exhibit moderate phyllic overprint.							

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
99.75	104.55	4.80	GRD	MG	Weak to moderate phyllic, weakly argillic granodiorite interval. Some stringer veins containting disseminated pyrite and semi massive pyrite are observed in interval. Vuggy quartz veins occur @ 101.46							
104.55	111.00	6.45	GRD	MG	Granodiorite exhibiting intermittent zones of weakly phyllic, argillic and propyliti alteration.							
111.00	134.11	23.11	GRD	MG	Relatively unaltered granodiorite with alternationg zones of weakl to moderatel argillic , weakly phyllic and propylitic alteration.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
0.00	1.28	1.28	CAS	--	casing							
1.28	14.07	12.79	GRD	MG	oxididized, medium-coarse grained granodiorite with intermittent zones of weak argillic alteration. Rubbly sections arelocally observed. Weak to moderate pervasive oidation is seen in grd host. Clay gouge is present @ 3.05-8.21m. 3 cm,light pink aplite dyke inclusion occurs at 7.05m. Local zone of trace propylitic alteration is seen @ 10.39m where sub-mm , black tourmaline crystals are observed (10.38m). Upper section of interval is fractured, rubbly and pervasively oxidized.							
14.07	30.96	16.89	GRD	MG	relatively unaltered granodiorite with intermittent ones of weak argillic alteration. Pervasive oxidation of host grd interval is locally observed. Oxidation occurs as light brown (limonite(?)) , clay oxidation and trace reddish hematitic alteration. Trace, carbonate infilled, and oxidized quartz veins occur sporadically throughout interval.							
30.96	36.37	5.41	GRD	MG	medium to coarse grained unaltered granodiorite with local rubbly, fracture zones (i.e. 30.05,31.70. 1-2cm fine grained volcanic clasts are locally observed in grd host rock. Volcanic clasts contain fine grained, dendritic magnetite.							
36.37	50.96	14.59	GRD	MG	med-coarse grained, trace argillic granodiorite with local zones of weak to moderate light brown clay and reddish hematite oxidation. Fracture zone ocurs @ 45.70-45.80. Oxidation in lower section of grd unit is more hematitic. Veinning appears less prominent than previous interval (trace 1-2mm,carbonate infilled, quartz veinlets occur sporadically.							

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
50.96	61.00	10.04	GRD	MG	relatively unaltered granodiorite with intermitten zones of weakly argilli alteration. Interval contains light pink, aplite dyke intrusions. Trace calcite veinlets are present on interval. hematite containing bands are also observed on interval.							
61.00	63.77	2.77	GRD	MG	moderately argillic granodiorite interval with local zone of trace propylitic alteration @ 63.20-63.77m. Trace , disseminated pyrite is observed within propylitic altered grd zones. (i.e. 63.76m).							
63.77	64.60	0.83	GRD	MG	weakly to moderately oxidized granodiorite . Trace sub-mm, pyrite bearing veinlets are locally observed							
64.60	71.69	7.09	QFP	MG	dark grey, dyke inclusion containing mm quartz , feldspar, hornblend clasts. Trace pyrite is observed within intrusion sometimes observed as sub mm pyrite bearing bands. 1-2mm calcite veinlets crosscut through pyrite bearing bands							
71.69	77.10	5.41	GRD	MG	granodiorite with locally variable zones of weak propylitic, potassic alteration.							
77.10	81.08	3.98	GRD	MG	granodiorite exhibiting moderate argillic alteration overprinting weakly propylitic alteration zones. Interval is fractured and oxidized along fracture and joint surfaces							
81.08	84.85	3.77	GRD	MG	Granodiorite interval with trace propylitic alteration and trace argillic alteration containing 1-30 cm pink, fine grained aplite dyke intrusions. Trace disseminated pyrite is observed in trace 1 - 2 mm, fine grained, smoky quartz veinlets. Quartz veinlets sometimes crosscut through aplite dyke intrusion (i.e. 81.60-82m). From 83-83.80, increased fracturing of granodiorite is observed with brown , clay rich, oxidized coatings along fracture and joint surfaces

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
84.85	91.00	6.15	GRD	MG	Granodiorite with weak potassic , and locally weak to moderate argillic alteration zones (Interval is more argillic and potassic altered than previous). Aplite intrusions become less prominent in this interval section Trace disseminated pyrite is observed in 1 -2 mm, fine grained, smoky quartz veinlets and sporadically observed in granodiorite unit. Interval exhibits increased mm-sized pyrite bearing veinlets compared to previous interval. From 87-88 m , interval is fractured and contains oxidized coatings along fracture and joint surfaces. Oblate, 5-6 cm, dark grey, fine grained inclusions in granodiorite unit are locally observed (i.e. 87.79-89.10).Oblate inclusions contains mm-sized quarz clasts and minor dendritic magnetite (weakly magnetic). Greenish, fine grained, silicaous dyke intrusion is observed @ 85.12m							
						MD	GY		ARG	2I		
						MD	BG					
						DK	GY		POT	2I	Py	3
91.00	92.17	1.17	GRD	MG	Granodioirite interval exhibiting moderate potassic alteration and weak argillic alteration with intermittent zones of weak to moderate argillic alteration. Trace mm- quartz veins are observed and carbonate infilling fracture surfaces is locally observed in interval. Overall interval contains less veins and less disseminated pyrite. No aplite intrusions observed in interval							
						MD	PK				Py	1
						LT	BG					
92.17	94.44	2.27	GRD	MG	Granodiorite interval with weak propylitic, argillic and trace potassic. Chlorite clasts are more abundant proximal to mm-sized pyrite bearing thin, quartz veinlets. Interval is less potassic altered than previous.

77.10	81.08	3.98	GRD	GRD	MG	granodiorite exhibiting moderate argillic alteration overprinting weakly propylitic alteration zones. Interval is fractured and oxidized along fracture and joint surfaces

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
81.08	84.85	3.77	GRD	GRD	MG	Granodiorite interval with trace propylitic alteration and trace argillic alteration containing 1-30 cm pink, fine grained aplite dyke intrusions. Trace disseminated pyrite is observed in trace 1 -2 mm, fine grained, smoky quartz veinlets. Quartz veinlets sometimes crosscut through aplite dyke intrusion (i.e. 81.60-82m). From 83-83.80, increased fracturing of granodiorite is observed with brown , clay rich, oxidized coatings along fracture and joint surfaces
84.85	91.00	6.15	GRD	GRD	MG	Granodiorite with weak potassic , and locally weak to moderate argillic alteration zones (Interval is more argillic and potassic altered than previous). Aplite intrusions become less prominent in this interval section Trace disseminated pyrite is observed in 1 -2 mm, fine grained, smoky quartz veinlets and sporadically observed in granodiorite unit. Interval exhibits increased mm-sized pyrite bearing veinlets compared to previous interval. From 87-88 m , interval is fractured and contains oxidized coatings along fracture and joint surfaces. Oblate, 5-6 cm, dark grey, fine grained inclusions in granodiorite unit are locally observed (i.e. 87.79-89.10).Oblate inclusions contains mm-sized quarz clasts and minor dendritic magnetite (weakly magnetic). Greenish, fine grained, silicaous dyke intrusion is observed @ 85.12m
91.00	92.17	1.17	GRD	GRD	MG	Granodioirite interval exhibiting moderate potassic alteration and weak argillic alteration with intermittent zones of weak to moderate argillic alteration. Trace mm- quartz veins are observed and carbonate infilling fracture surfaces is locally observed in interval. Overall interval contains less veins and less disseminated pyrite. No aplite intrusions observed in interval
92.17	94.44	2.27	GRD	GRD	MG	Granodiorite interval with weak propylitic, argillic and trace potassic. Chlorite clasts are more abundant proximal to mm-sized pyrite bearing thin, quartz veinlets. Interval is less potassic altered than previous.
94.44	95.62	1.18	GRD	GRD	MG	Moderately potassic altered granodiorite with weak to moderaty argillic alteration. Potassic alteration appears to overprint argillic alteration. Trace chlorite clasts are observed in interval (possible trace of propylitic (?)
95.62	96.76	1.14	GRD	GRD	MG	weak potassic , propylitic and argillic interval of granodiorite. Trace mm-sized pyrite bearing quartz veinlets are locally observed with chlorite clasts observed around veinlets.
96.76	96.94	0.18	VEN	VEIN	MG	Quartz/ carbonitic (rhodochrosite/ankerite), pyrite bearing vein zone intrusion in granodiorite proximal to contact with quartz feldspar porphyry dyke section. Blackjack sphalerite crystals are locally observed in vein section hosted in smoky quartz vein and surrounded by blebby and disseminated pyrite. Vein appears vuggy and coloform bands comprised of pinkish (rhodocrosite), ankerite and smoke quartz fine grained bands locally observed. From 96.90-96.94, interval is gougy and brecciated (faulted contat between GND and Dyke (?)).
96.94	97.97	1.03	QFP	DYK	FG	light grey, dark brown, fine-medium grained quartz feldspar porphyry dyke. @ 95.34m dyke becomes darker and medium grained, contains larger clasts composed of quartz, feldspar and dark grey, fine grained clasts. Proximal to contact with altered granodiotire dyke becomes fine grained again with minor reddish banding (banding from darker upper portion of dyke (?)

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
97.97	98.10	0.13	VEN	GRDA	MG	gougy, brecciated vein zone in altered granodiorite. Disseminated pyrite and sub-mm cubic pyrite is locally observed within quartz vein.
98.10	100.77	2.67	GRD	GRDA	MG	Moderately to strongly argillic altered granodiorite with trace propylitic and possibly potassic alteration (minor k-spar, pinkish matrix in GRD occassionally observed. Trace, coloform bands composed of light pink (rhodochrosite, milky and smoky quartz) are locally observed in interval. Trace disseminated pyrite is observed near colorform bands and within thin sub mm smoky quartz veinlets. Interval is moderately fractured (likely due to argillic alteration).
100.77	101.63	0.86	VEN	GRDA	MG	stringer vein zone contained in altered GRD. Approximately 8 veins composed of pyrite bearing, smoky quartz (~30 degrees TCA) and minor interstitial carbonate within quartz veins
101.63	102.00	0.37	GRD	GRDA	MG	moderatel argillic altered GRD, high fractured and soft ad trace propylitic alteration
102.00	102.43	0.43	QFP	DYK	MG	fine grained quartz feldspar porphyry dyke intrusion with contac between GRD and dyke ~ 15 degrees TCA (contact is gougy and light green in quartz feldspar porphyry section i.e. 102.03m . Interval is fractured
102.43	102.60	0.17	GRD	GRDA	MG	fractured section of argillic altered granodiorite. Oxidation is observed in fracture and joint surfaces.
102.60	103.67	1.07	GRD	GRDA	MG	moderate argillic altered granodiorite and trace quartz veinlets. Trace chlorite clasts occur throughout interval.
103.67	105.41	1.74	GRD	GRDA	MG	Moderately propylitic alteration in granodiorite interval and intermittent zones of moderate potassic alteration (i.e. 103.85m). Interval is more fractured beyond 104.55m where brownish oxidation is observed along fracture and joint surfaces. Trace mm quart/ carbonitic veinlets occur locally in interval.
105.41	105.98	0.57	GRD	GRDA	MG	Fractured, gougy and brecciated, moderately propylitic altered granodiorite. Faulte brecciation proximal to contact (?). Trace disseminated pyrite is observed in grd.
105.98	106.77	0.79	QFP	DYK	MG	reddish, fine to medium grained quartz feldspar porphyry dyke intrusion. Contact between grd and dyke appears faulted (brecciated, gougy and highly fractured).
106.77	107.74	0.97	GRD	GRDA	MG	weakly potassic and moderately argillic granodiorite interval. Interval is moderately fractured and trace chlorite clasts are locally observed (trace propylitic (?)).
107.74	110.05	2.31	GRD	GRDA	MG	relatively unaltered granodiorite interval with traces of propylitic and potassic alteration. 2 cm pink, fine grained aplite dyke intrusions occur in interval. Trace quartz veinlets with interstitial carbonitic infill are also present in interval with trace disseminated pyrite observed in some veinlets.
110.05	111.83	1.78	GRD	GRDA	MG	moderate potassic alteration in granodiorite interval with trace argillic alteration. 5mm-1cm pink aplite dyke intrusions are locally observed and appear to be offset by minor, oxidized, quartz veinlets.
111.83	113.14	1.31	GRD	GRDA	MG	Granodiorite exhibiting local zones of weak to argillic, and trace potassic alteration. Aplite intrusions are no longer observed in interval.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
113.14	114.85	1.71	GRD	GRDA	MG	weakly argillic to trace proylitic altered granodiorite containing colorform bands of quartz and carbonitic infill (ankerite (?), and pyrite bearing smoky quartz stringer veins (2-3 mm) . Pyrite is also found interstitially surrounding granodiorite clasts.
114.85	116.25	1.40	GRD	GRDA	MG	moderate potassic and argillic altered granodiorite. Interval is soft and highly fractured.
116.25	125.00	8.75	GRD	GRDA	MG	Moderately to stongly argillic alteration in granodiorite unit with trace potassic and possible propylitic alteration (trace chlorite clasts locally observed). Trace pyrite bearing, quartz veinlets occur in interval.
125.00	125.60	0.60	GRD	VEIN	MG	Brecciated vein zone and stringer vein zone in altered granodiorite. Blebby pyrite is observed near quartz and smoky quartz veins. Vuggy quartz surrounding light pink, slightly reactive to HCL rhodochrosite is locally observed. Fine grained, cubic cleavage , galena crystals are also observed near blebby pyrite in vein zone. Calcite vein appear to brecciate granodiorite and crosscuts through pyrite bearing veins. Ankerite occurs as interstitial infill in veins and within pyrite blebby zone.
125.60	126.80	1.20	GRD	FLTM	MG	brecciated, gouged and sheared argillic alteration granodiorite with local rubbly zones (i.e. 126-126.60). Interval contains 2-3 mm, fine grained, pyrite bearing veins ~ 20-25 TCA intruding in host granodiorite. Interstitial carbonitic infilling and surrounding quartz veins are locally observed.
126.80	128.59	1.79	GRD	FLTM	MG	Moderately to strongly sericitized, mineralized , faulted brecciated granodiorite . Interval is soft and gougy and contains fine grained, disseminated pyrite in GRD. Interval is more sericitized compared to previous one. Dark fine grained, pyrite bearing, smoky quartz (?) veins are locally observed throughout interval. Ankerite occurs interstitially within quartz veins and in host GRD.
128.59	130.63	2.04	GRD	FLTM	MG	gouged, sheared (graphitic surfaces along joints)and fault brecciated granodiorite interval exhibitting moderate argillic and local sericitized intervals. Fine grained disseminated and blebby pyrite within dark grey, fine grained (smoky quartz(?) veins), quartz and within host granodiorite are locally observed (fine pyrite in likely sercitizied interval (?). Sphalerite bearing veins are locally observed. Vein restricted calcite veinlets are locally occuring within pyrite and sphalerite bearing quartz veins.
130.63	132.30	1.67	GRD	GRDA	MG	Moderate propylitic and weakly argillic altered granodiorite interval. 130.63-130.90 pyrite occur within smoky quartz veins as blebby and disseminated pyrite. Chlorite clasts are more prominent in interval. Calcite veinlets appear to microbrecciate some sections of granodiorite. Trace hematite clasts and veinlets are observed in interval.
132.30	135.10	2.80	GRD	GRDA	MG	granodiorite interval exhibiting moderate argillic alteration and weak propylitic and potassic alteration (trace of potassic alteration more prominent from 133.72 onwards (still weak potassic though).Small vein section 134.96-135.02 containing minor disseminated and surrounded by pinkish, rhodochrosite vein.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
135.10	139.74	4.64	GRD	GRDA	MG	Moderate argillic, moderately potassic and trace propylitic alteration observed in granodiorite interval. (increased potassic alteration compared to previous interval). From 137-138m, interval is fractured. Interval appears weakly magnetic. Trace 1 mm quartz veinlet occur in interval and do not appear to contain sulfides.
139.74	141.70	1.96	GRD	GRDA	MG	Granodiorite exhibiting moderate argillic, weakkly propylitic and trace potasic alteration (slightly more potassic toward the lower ection of the interval). From 140-140.60m interval is fractured and a gougy brecciated seam is observed @ 146.50 (fine grained pyrite is observed in gougy), brecciated seam and appears to be sericitized. 4-5 mm calcite veins are occassionally observed in interval.
141.70	143.25	1.55	GRD	GRDA	MG	Highly fractured, moderate potassic altered granodiorite interval. Potassic alteration I more prominent compared to previous interval.
143.25	144.15	0.90	GRD	GRDA	MG	Relatively unaltered granodiorite interval exhibiting weak potassic and propylitic alteration. 1 cm pink aplite inclusion occurs @ 144-144.14m (granodiorite is relatively unaltered compared to previous intervals)
144.15	145.42	1.27	GRD	GRDA	MG	Granodiorite with moderately to strong argillic alteration and trace propylitic, interval is soft and gougy, brecciated zones are locally observed.Weak potassic overprint from 144.15-144.65m. @ 144.65m mily quartz, and fine grained, pyrite bearing smoky quartz (?) vein is present in grd interval (~ 20 TCA).
145.42	147.04	1.62	GRD	GRDA	MG	gougy, brecciated, (possibly fault related) moderate argillic granodiorite interval. Trace disseminated pyrite occurs in irregular, dark, fine grained clasts. Minor quartz/ carbonitic veinlets occur in section.
147.04	147.77	0.73	GRD	VEIN	MG	Brecciated vein zone intuding into gouged, brecciated, moderately argillic granodiorite unit (fault brecciation (?). Trace disseminated pyrite is locally observed in vein section. 2-3 cm ankerite vein @ 147.60 I observed and appears to be croscut by milky quartz inclusion. Trace to minor chlorite clast occur throughout interval (trace propylitic (?).
147.77	153.82	6.05	GRD	GRDA	MG	Interval comprised of predominantly argillic alteration (moderate) with intermittent sections of weakly potassic and trace to minor propylitic alteration. Local rubbly, brecciated (possibly sheared) zones are locally observed. Breciated sections appear to have weak sericite alteration and contain disseminated pyrite throughout grd and within quartz veins. Ankerite is observed as interstitial intrusions within brecciated section and crosscutting pyrite bearing quartz veining . Occassional 1-2 cm pinkish aplite dyke intrusions occur in least altered granodiorite sections. Brecciated zones also appear to host more pyrite bearing vein and fine grained disseminated pyrite.
153.82	154.80	0.98	GRD	FLTM	MG	Locally gouged and brecciated granodiorite exhibiting weakly argillic and moderate propylitic alteration (chlorite clasts are commonly observed). Brecciation in interval appears to be fault related. Disseminated pyrite is locally observed in host grd and in trace mm sized, dark grey, fine grained, veinlets. Ankerite veins are locally observed proximal to pyrite bearing veinlets , appear to interstitially surround grd. Calcite infilled fractures crosscut through ankerite-quartz veins locally.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
154.80	155.44	0.64	FLT	FLTM	MG	Brecciated, gouged, sheared interval of moderately propylitic and weakly argillic faulted granodiorite. Disseminated pyrite is locally observed in host rock and within dark grey, fine grained veinlets and clasts (sericitized clasts (?), soft greypyrite bearing). Interstitial ankerite occurs in fault zone
155.44	155.85	0.41	MX	FLTM	MG	Fault foot wall interval composed of mineralized vein zones and greenish,fine grained, dyke intrusions (fault footwall). Vein zone is composed of mineralized quartz veins, smoky quartz veinlets. Vein zone contains trace galena, arsenopyrite located near pyrite rich zones. Pyrite in vein zone ranges from disseminated, blebby to euhedral, cubic pyrite crystals. Trace blackjack sphalerite is also observed within quartz vein zone. Dyke sections appear brecciated, contain fine grained pyrite and contain interstitial ankerite partially brecciating dyke section and crosscutting quartz veinlets locally.
155.85	158.00	2.15	GRD	FLTM	MG	Brecciated granodiorite exhibiting propylitic alteration. Brecciation zones are gougy and appear to be fault related (proximal to fault zone interval remains brecciated). 2-3 mm, pyrite bearing veinlets are locally observed in interval.
158.00	158.57	0.57	FLT	FLTM	MG	gouged, brecciated faulted section of granodiorite. 1 cm quartz veins with calcite fracture infill are locally observed. Cubic pyrite crystals and disseminate pyrite also occurs in granodiorite interval. Dark grey, fine grained, pyrite bearing bands are also observed in faulted interval.
158.57	159.12	0.55	VEN	FLTM	MG	fault footwall interval containing alternation interval of propylitic granoidiorite and mineralized veins. Vein zone contains pyrite bearing, dark grey, fine grained bands and pyrite bearing quartz veins. Mineralized veins contain bands of blebby pyrite where trace galena, blackjack and honey brown sphalerite are locally observed around pyrite bands. Possible arsenopyrite (?) also occurs within vein zone section. Disseminated pyrite is commonly observed within altered granodiorite section.
159.12	159.90	0.78	GRD	FLTM	MG	Moderately propylitic granodiorite interval containing 5 cm minearlized quartz vein section Mineralized vein zone @ 159.55 is observed and it contains pyrite bearing smoky quartz veins, dark grey, fine grained, bands containing disseminated pyrite, hematite banding and trace ankerite infilling quartz veins. Pyrite in vein zone is blebby and appears to contain trace arseno pyrite (?).
159.90	160.53	0.63	GRD	GRDA	MG	weak argillic and trace propylitic alteration interval of granodiorite
160.53	163.80	3.27	GRD	GRDA	MG	relatively unaltered interval of granodiorite with weakly potassic and trace propylitic alteration (some chlorite clasts are locally observed in interval). Trace 1-2 mm pyrite bearing quartz veinlets occur in interval.
163.80	164.60	0.80	GRD	GRDA	MG	interval composed of moderately potassic and weakly argillic altered granodiorite. Pyrite bearing quartz vein occurs @ ~ 163.97m. Pyrite in vein occurs as fine grained disseminations.
164.60	167.58	2.98	GRD	GRDA	MG	Granodiorite interval exhibiting weak potassic alteration overprintin propylitic and argillic alteration. Alteration is not as prominent as previous interval.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
167.58	172.52	4.94	GRD	GRD	MG	moderate to strong argillic granodiorite with intermittent zones of moderate potassic an propylitic alteration. Trace 1-3 quartz veins are locally observed in interval.
172.52	174.55	2.03	GRD	GRD	MG	Granodiorite interval with weak potassic and trace propylitic and argillic alteration. Darker matrix clasts are observed in granodiorite interval
174.55	175.11	0.56	GRD	GRD	MG	Granodiorite interval with weak phyllic an trace propylitic alteration. Disseminated pyrite, increased quartz clasts, muscovite present and weak to moderate silicification are observed in interval. A grey, fine graine, pyrite bearing gougy seam (gouged vein(?)) occurs in interval.
175.11	175.70	0.59	GRD	GRD	MG	fractured and rubbly interval of weakly potassic and propylitic granoiorite.
175.70	176.90	1.20	GRD	GRD	MG	granodiorite interval exhibiting moderate potassic an weak propylitic alteration. (increased chloritization and K-spar in granodiorite compared to previous interval.
176.90	178.30	1.40	GRD	GRD	MG	Granodiorite interval with weak to moderate argillic and propylitic alteration overprinting trace potassic alteration. From 177.50-177.80, milky quartz and smoeky quartz veinlets are observed with trace pyrite disseminations occuring within dark veinlets and sometimes surrounding milky quartz veins. Increase propylitic alteration is observed in this section.
178.30	179.67	1.37	GRD	GRD	MG	Moderate argillic interval of granodiorite with weak potassic and trace propylitic alteration (trace chlorite clasts observed) . Rubbly , gougy zones are observed @ 178.50-179.20 . Trace mm-quartz veinlets are sporadically observe in altered interval.
179.67	180.40	0.73	GRD	GRD	MG	Granodiorite interval displaying moderate propylitic alteration . Pyrite bearing smoky quartz veins occur in interval and appear to be gouged, brecciated. Trace disseminated pyrite also occurs within grd , proximal to brecciation zone.
180.40	182.70	2.30	GRD	GRD	MG	Granodiorite interval exhibiting moderate argillic , weakly propylitic and trace potassic alteration. Intermittent zones of increased argillic alteration occur in interval.
182.70	185.78	3.08	GRD	GRD	MG	Granodiorite interval exhibiting moderate argillic and weakly to moderate propylitic alteration. Minor mm-size pyrite bearing quartz occur throughout interval. From 184.10-184.30m granodiorite is gouged, appears brecciated and sericitized (soft, grey, fine graine, glittery , containing disseminated pyrite).
185.78	190.67	4.89	GRD	GRD	MG	relatively unaltered granodiorite with trace to weak potassic alteration and trace propylitic alteration (some chlorite clasts are observed in interval). Alteration in interval is less prominent compared to previous intervals. A 10 cm, black, fine grained, polymictic (volcanic (?) clasts is observed in grd interval. From 190.50-190.60 pink, fine grained aplite dyke intrusion is observed in grd.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
190.67	192.10	1.43	GRD	FLTM	MG	Brecciated, gougy interval of weak to moderate argillic and weakly propylitic granodiorite and intermittent zones of unbrecciated weakly altered granodiorite. Brecciated zone is mineralized in quartz veins and along gouge-brecciated seams. Mineralized zone contains blebby pyrite, disseminated pyrite, sub-mm galena surrounding pyrite and trace (possibly arsonepyrite) near pyrite reach zones along gouged brecciated seams and quartz veins. (brecciated interval proximal to fault mineralized transition zone).
192.10	194.45	2.35	GRD	FLTM	MG	fault brecciated, fractured and gouged fault transition zone containting sections of moderately argillic, weakly propylitic granodiorite and dark green, fine grained , mafic dyke intrusion and pyrite and clast bearing, medium grey, fine grained, dyke intrusions. Vein section @ 92.60 contains blebby pyrite surrounding quartz veins (pyrite does occur in clear quartz vein but is more prominent in grey, fine grained, halo surrounding quartz vein. Quartz vein appears offset by fracturing (likely faulting (?). Mineralized vein zone also contains trace arsone pyrite in pyrite rich zones and cubic galena contained within rhodochrosite vein parallel to quartz vein. Rhodochrosite vein appears to interstitially surround galena bearing zones (likely rhodochrosite infill at a later stage (?)). Trace ankerite is locally observed in mineralized vein zone sometimes microbrecciating host rock . Blebby and euhedral, cubic pyrite is commonly occurring within altered grd and along fracture surfaces.
194.45	195.56	1.11	MAF	FLTM	FG	dark green, fine grained, highly fractured, mafic dyke interval. sub-mm trace, pyrite bands are locally observed within interval.
195.56	196.84	1.28	MAF	FLTM	MG	dark grey , medium grained, clast bearing dyke interval containing disseminated pyrite, blebby pyrite within mm-sized veinlets and 1-4mm cubic pyrite crystals within host rock. Intermittent zones of dark green fine grained dyke interval (from previous unit) are also observed here.
196.84	197.40	0.56	FLT	FLTM	FG	Gouged fault brecciated interval of altered grd. Interval represent actual fault zone (previous sections were fault related faulted rock) . Euhedra, 1-5 mm cubid pyrite and pyrite blebs are commonly observed in mineralized fault. Some seritization is also observed in faulted interval.
197.40	198.54	1.14	MX	FLTM	MG	Mineralized section of weakly propylitic and potassic altered granodiorite. Pyrite occurs as fine grained disseminations within grd and as blebby pyrite within quartz veins surrounded by honey brown and blackjack sphalerite. Trace galena and arsone pyrite is also observed in mineralized vein zone (i.e. 197.60m). Rhodochrosite veins near mineralized quartz veins occur in mineralized zones. Minor hematite is locally observed in lower interval section of altered grd (i.e 198.50m).
198.54	199.64	1.10	GRD	GRDA	MG	weakly sheared, granodiorite interval exhibiting weakly potassic and trace propylitic alteration.Trace pyrite is locally observed within quartz veinlets and within host rock.
199.64	201.00	1.36	GRD	GRDA	MG	weakly argillic and trace potassic altered granodiorite interval (increased swelling of feldspathic clasts compared to previous interval). Pyrite bearing, 1-3 mm quartz veins are locally observed.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
201.00	203.62	2.62	GRD	GRDA	MG	Granodiorite interval exhibiting weak propylitic and potassic alteration. (chlorite clasts and k-spar locally observed in interval). Pyrite bearing quartz veinlets and dark, fine grained clasts are commonly occuring in interval. 1-7 cm pink, aplite dyke intrusions are also observed in interval. @ 201.60m vein zone crosscutting through aplite dyke intrusion is observed. Vein zone contains pyrite abundant quartz veins, vuggy coloform bands composed of quartz, rhodochrosite and interstitial ankerite. Trace galena and sphalerite are also observed in vein zone. Carbonitic veins appear to replace/infill exisiting vuggy quartz veins. Carbonitic veins run parallel to quartz veins (rhodochrosite and ankerite veins do not crosscut quartz veins but appear to partially replace and infill existing quartz veins). 1-2 mm, pyrite bearing veinlets crosscut through aplite dyke intrusions as well.
203.62	205.60	1.98	GRD	GRDA	MG	granodiorite exhibiting weak potassic and propylitic alteration. Interval is fractured and contains less veins than previous interval. aplite dyke intrusion is observed @ 205.40m. Trace pyrite bearing , dark fine grained, veinlets are locally observed in interval. Trace hematite bands are locally observed in unit.
205.60	220.98	15.38	GRD	GRDA	MG	Granodiorite unit with weaky to moderate potassic alteration and weak propylitic alteration. Interval contains small sections of intermittent moderate propylitic and moderate potassic alteration (most of interval is weakly potassic and propylitic but has small sections of increased potassic/propylitic alteration (~10-20 cm). Aplite dyke intrusions are no longer observed in granodiorite interval. Trace hematite bands also occur in unit (i.e. 215.75m). Sub-mm dark, fine grained, pyrite bearing veinlets occur locally throughtout interval . Dark, fine grained inclusions apppear to be more prominent in upper section of granodiorite (appear as interstitial, semi-chaotic inclusions in grd (i.e. 209-214m)). Some pyrite bearing quartz veinlets containing hematite are also observed in grd.
220.98	221.92	0.94	GRD	GRDA	MG	granodiorite exhibiting weak argillic ,potassic and trace propylitic alteration. Trace 1 mm quartz veinlets are observed in interval.
221.92	222.38	0.46	GRD	GRDA	MG	gouged, brecciated (shear brecciation (?)) section of weakly potassic , propylitic and trace argillic granodiorite. Disseminated and cubic pyrite is commonly observed in brecciated interval.
222.38	224.25	1.87	GRD	GRDA	MG	weakly potassic and argillic granodiorite with trace propylitic alteration (trace chlorite clasts observed). 1 cm- quartz veins occur in interval where pyrite blebs ar contained at the edges of the quartz veins as sub-mm pyrite bands.
224.25	224.44	0.19	GRD	GRDA	MG	moderately propylitic (chlorite more abundant) section of granodiorite. Pyrite and hematite are observed in quartz vein.
224.44	227.08	2.64	GRD	GRDA	MG	Granodiorite interval exhibiting weakly potassic, propylitic and trace argillic alteration. Interval is locally farctured and contains less pyrite and veining compared to previous interval
227.08	228.20	1.12	GRD	GRDA	MG	weakly to moderately propylitic granodiorite interval with trace potassic and argillic alteration.pyrite bearing milky quartz mm-sized veins are locally observe in interval (note: increased veining and pyrite compared to previous more potassic altered interval).

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
228.20	228.64	0.44	GRD	VEIN	MG	Mineralized vein zone within propylitic altered granodiorite. Mineralized zone contains fine grained pyrite, interstitial and cubic galena and interstitial arseno pyrite near galena and pyrite rich zones. Disseminated pyrite is locally observed within host granodiorite as well. Ankerite and rhodochrosite veins appear to infill and brecciate existing quartz veins and pyrite bearing smoy quartz veins locally. Galena and arsonepyrite appear more prominent in rhodochrosite veins. Rhodochrosite veins contains sub-mm fine grained, coloform bands (?) or fine grained pyrite rich bands (?) (too small to differentiate). Some quartz veins appear vuggy and host mineralization (pyrite, galena, arsonopyrite observed in quartz vein and in quartz vein rhodochrosite appears as interstial infill. Overall, carbonitic brecciating veins ~ 40 TCA. Hematized clasts are also observed in granodiorite mineralized vein zone
228.64	230.12	1.48	GRD	FLT	MG	gouge, brecciated and rubbly interval of weakly argillic, propylitic granodiorite (faulted vein zone foot wall section). Trace blebby yrite and hematite are locally observed in relatively competent precciated section (i.e. 229.60m.
230.12	230.68	0.56	GRD	GRDA	MG	Granodiorite interval exhibiting weak propylitic, argillic and trace potassic alteration.
230.68	236.05	5.37	GRD	GRDA	MG	granodiorite interval exhibiting intermittent patchy zones of weakly to moderate potassic, weakly to moderately argillic alteration. Overall most of granodiorite exhibits weak potassic , argillic and propylitic alteration but varies locally where increased alteration zones are locally observed (10-40 cm). Minor 2-4 mm quartz veins, sometimes hosting disseminated pyrite are locally observed (less veinning and pyrite in potassic altered sections however). A 5 cm, ~ 70 degrees TCA , pink, fine grained aplite intrusion occurs @ 236.70m.
236.05	238.39	2.34	GRD	GRDA	MG	Granodiorite interval exhibiting weak potassic alteration overprinted by weakly propylitic alteration. @ 236.22-236.30m mineralized vein zone is observed where alteration near vein zones appears weakly phyllic and propylitic (increased quartz clasts, disseminated pyrite near vein zone and minor muscovite observed). Vein zone contains blebby pyrite, honey brown sphalerite, trace galena and arsonepyrite near pyrite rich zones. Veins in mineralized zone are ~ 55 degrees TCA. Ankerite replacing and brecciating clear quartz veins is locally observed. Hematite bearing quartz vein appears to crosscut through mineralized veins and ankerite veins locally. Aplite dyke intrusions are no longer present in altered granodiorite interval.
238.39	240.62	2.23	GRD	GRDA	MG	Weakly to moderate argillic, propylitic and trace potassic altered granodiorite interval with minor 2 cm mineralized veins. Veins are more prominent in propylitic/argillic altered grd than potassic. Mineralized veins contain blebby pyrite, sphalerite, trace galena and carbonitic infill of vuggy quartz veins. (i.e. 238.80m). Interstitial Arsenopyrite occurs @ 239.68m along with blebby pyrite and sphalerite hosted in quartz vein.
240.62	242.60	1.98	GRD	GRDA	MG	Granodiorite exhibiting weak to moderate propylitic alteration and trace potassic and argillic alteration. Minor quartz veins are locally observed in interval (i.e. 241.70m) where blebby pyrite is hosted and hematit appears to surround quartz vein.aplite intrusions are no longer observed

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
242.60	247.62	5.02	GRD	GRDA	MG	weakly potassic and trace propylitic granodiorite with increased magnetite and mafic clast and dendritic inclusion component (clasts and dark dendritic inclusions are strongly magnetic). Trace pyrite bearing veinlet occurs @ 246.42m. However veinning is less prominent than previous interval.
247.62	249.00	1.38	GRD	GRDA	MG	weakly to moderate argillic , trace propylitic granodiorite interval. Rubbly, gougy zone occurs from 248.41-248-85m.
249.00	251.00	2.00	GRD	GRDA	MG	weakly potassic and trace propylitic altered granodiorite interval. (chlorite clasts locally observed).
251.00	251.82	0.82	GRD	GRDA	MG	Granodiorite exhibiting weak argillic, propylitic and potassic alteration. Trace 2-3 mm carbonitic veins infillig pre existing quartz veins are locally observed (no mineralization in veins however).
251.82	253.10	1.28	GRD	GRDA	MG	Granodiorite interval with weak potassic and trace propylitic alteration.
253.10	254.42	1.32	GRD	GRDA	MG	weakly potassic and weaklt argillic alteredgranodiorite interval. Interval displays dark red oxidation (likely hematite)
254.42	257.56	3.14	GRD	GRDA	MG	weakly potassic and trace propylitic granodiorite interval with patchy zones of increased potassic alteration. Minor 2-3 mm quartz veinlets are locally observed. Grd in interval displays increased magnetite inclusions.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
0.00	1.28	1.28	CAS	--	casing							
1.28	14.07	12.79	GRD	MG	oxididized, medium-coarse grained granodiorite with intermittent zones of weak argillic alteration. Rubbly sections arelocally observed. Weak to moderate pervasive oidation is seen in grd host. Clay gouge is present @ 3.05-8.21m. 3 cm,light pink aplite dyke inclusion occurs at 7.05m. Local zone of trace propylitic alteration is seen @ 10.39m where sub-mm , black tourmaline crystals are observed (10.38m).							
14.07	30.96	16.89	GRD	MG	relatively unaltered granodiorite with intermittent ones of weak argillic alteration. Pervasive oxidation of host grd interval is locally observed. Oxidation occurs as light brown (limonite(?)) , clay oxidation and trace reddish hematitic alteration. Trace, carbonate infilled, and oxidized quartz veins occur sporadically throughout interval.zones of trace to weak propylitic alteration are observed @ 19.88-20.08,22.50-23.56m and appear to overprint weak argillic altered grd. Trace, mm-pyrite bearing bands are present @ 23.50m. Dark, fine grained pyrite bearing veinlets are offsetby 1-2m, oxidizied carbonate veinlets. Dendritic magnetite is also observed within some calcite veinlets.							
30.96	50.96	20.00	GRD	MG	relatively unaltered granodiorite with intermittent zones of trace argillic, propylitic alteration. Local oxidized zones are also observed. Oxidation is seen on some grd sections(trace argillic) and along carbonate infilled veinlets. Clay and hematitic oxidation is present along fracture and joint surfaces as well.oxidation is less pervasive than previous unit

159.90	167.58	7.68	GRD	MG	Granodiorite with alternating, intermittent zones of weakly argillic, propylitic and potassic alteration. Trace pyrite bearing vienlets occur throughout interval and locally fractured zones.							
167.58	185.78	18.20	GRD	MG	granodiorit with alternating zones of moderate propylitic, argillic and potassic alteration. Zones of increased argillic alteration are less competent and are sometimes gougy. Interval is more altered than previous unit (stronger argillic, potassic and propylitic alteration; and possible trace phyllic alterationproximal to gouged, brecciated seam containting pyrite (disseminated pyrite, muscovite and increased quartz clasts are present I.e. 174.65m).							
185.78	190.67	4.89	GRD	MG	relatively unaltered granodiorite with trace to weak potassic alteration and trace propylitic alteration (some chlorite clasts are observed in interval). Alteration in interval is less prominent compared to previous intervals. A 10 cm, black, fine grained, polymictic (volcanic (?) clasts is observed in grd interval. From 190.50-190.60 pink, fine grained aplite dyke intrusion is observed in grd.

190.67	194.45	3.78	GRD	MG	Transition zone composed of fractured, gouged and brecciated (fault related) weakly argilic, propylitic granodiorite and dark green, fine grained , mafic dyke intrusions. Faulted transition zone is mineralized in quartz veins (blebby pyrite, disseminated pyrite, cubic galena and trace arseno pyrite locally observed in mineralized vein zones). Rhodochrosite is observed surrounding galena bearing zones and partially infilling mineralized quartz veins (i.e. 192.48-192.60m: In this mineralized zone rhodochrosite is located parallel in respect to quartz vein and interstitially surrounds cubic galena). (later stage rhodochrosite replacement an infill of mineralized vein zones (?).

228.20	228.64	0.44	GRD	MG	Mineralized vein zone within propylitic altered granodiorite. Mineralized zone contains fine grained pyrite, interstitial and cubic galena and interstitial arseno pyrite near galena and pyrite rich zones. Disseminated pyrite is locally observed within host granodiorite as well. Ankerite and rhodochrosite veins appear to infill and brecciate existing quartz veins and pyrite bearing smoy quartz veins locally. Galena and arsonepyrite appear more prominent in rhodochrosite veins. Rhodochrosite veins contains sub-mm fine grained, coloform bands (?) or fine grained pyrite rich bands (?) (too small to differentiate). Some quartz veins appear vuggy and host mineralization (pyrite, galena, arsonopyrite observed in quartz vein and in quartz vein rhodochrosite appears as interstial infill. Overall, carbonate vein breccia cuts at ~ 40 TCA. Hematized clasts are also observed in granodiorite mineralized vein zone

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
0.00	1.20	1.20	CAS	--	casing							
1.20	2.40	1.20	OVB	--	ovb							
2.40	7.21	4.81	GRD	MG	Relatively unaltered granodiorite with minor local argillic and propylitic alteration zones (i.e. 5 m, feldspathic clast swelling and occasional chlorite clasts are locally observed) exhibiting moderate brownish/reddish oxidation in fractures, joint surfaces and within granodiorite host rock. Mm-sized tourmaline crystals are observed from 4.60-5 m hosted within granodiorite. Minor mm- oxidized quartz veins are locally observed. Trace disseminated pyrite located within veinlets and sometimes within host rock are seen in interval.							
7.21	14.25	7.04	GRD	MG	Moderately- oxidized granodiorite interval exhibiting weak propylitic and trace phyllic alteration (?) (rock is greenish contains chlorite clasts, 2-4 mm quartz clasts and trace disseminated pyrite). Sub-mm tourmaline clasts are commonly observed within granodiorite. Minor mm-sized, oxidized veinlets sporadically containing disseminated pyrite are locally observed.							
14.25	15.86	1.61	GRD	MG	Moderately oxidized, fractured, interval of unaltered granodiorite exhibiting trace to minor propylitic alteration locally (minor chlorite clasts observed).							
15.86	21.18	5.32	GRD	MG	Pervasively oxidized granodiorite interval exhibiting weak phyllic alteration overprinting trace argillic alteration sections (quartz clasts observed, muscovite (sericite(?) basal cleavage crystals observed, weakly silicified). Pyrite bearing ,mm-sized, quartz veins are locally observed in interval as well as trace disseminated pyrite in GND. Carbonitic veinlets (likely calcite; moderately reactive to HCL) located near pyrite bearing quartz are present in interval. Rubbly zone observed from 18.40-18.80m							

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
21.18	26.60	5.42	GRD	MG	Highly fractured, moderately oxidized granodiorite unit exhibiting weak-moderate phyllic alteration (phyllic alteration halo) overprinting trace argillic and propylitic alteration (clay rich, swelled up feldspathic clasts and feldspathic clasts surrounding chlorite crystals are sometimes observed). A rubbly, oxidized section occurs at 21.34-22.01m. Phyllic alteration becomes more prominent proximal to feldspathic dyke contact). Phyllic alteration zones contain quartz clasts, appear weakly to moderately silicified, contain basal-cleavage muscovite crystals and mm-sized pyrite blebs within smoky quartz veins. A gougy, clay rich, brecciated seam is present right at the contact between granodiorite and quartz feldspar porphyry dyke (faulted contact(?)). Quartz vein @ 26.50 brecciates host granodiorite unit.							
26.60	29.02	2.42	GRD	MG	Medium grey/greenish , fine grained quartz feldspar porphyry dyke (quartz clasts locally observed but feldspathic clasts are much more abundant) containing trace chlorite clasts within some feldspar clasts. Trace mm-sized quartz veinlets containing dendritic magnetite are locally observed.							
29.02	29.87	0.85	GRD	MG	Brown/reddish, fine grained, oxidized quartz feldspar porphyry dyke exhibiting brecciation and rubbly zones proximal to contact between dyke and vein contact.							

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
29.87	31.07	1.20	VEN	MG	quartz/pyrite vein zone contained within soft, brecciated medium grey/ greenish, granodiorite host exhibiting weak propylitic and phyllic alteration (i.e. 30.29; chlorite clasts, quartz, muscovite (?) crystal and trace fine grained disseminated pyrite is locally observed in host rock. Proximal to vein zone, dyke is brecciated and rubbly (faulted contact(?). Vein zone appears to be brecciated by milky quartz veins and contain mm-sized pyrite blebs and pyritic disseminations. Some vuggy quartz veinlets are also observed within vein zone . Black fine grained, smoky quartz is present at 30.90 and is brecciated by milky quartz. Fracture surfaces along vein zone are moderately oxidized							
31.07	33.12	2.05	FLR	MG	light to medium grey, fractured, quartz feldspar porphyry dyke interval which is brecciated and gougy proximal to previous vein zone (faulted vein zone footwall (?)). Minor oxidation is observed along fractures and joint surfaces.							
33.12	33.74	0.62	VEN	MG	Pyrite bearing, milky and smoky quartz, brecciated vein zone included into quartz feldspar porphyry dyke. Disseminated pyrite is locally observed near and within smoky quartz veinlets. Brecciated zones appear gouged near the vein boundary.							
33.74	34.77	1.03	GRD	MG	Light/medium grey, fine grained, brecciated quartz feldspar porphyry dyke interval . Brecciated sections are soft and gougy.							
34.77	36.48	1.71	GRD	MG	Light-medium grey, locally oxidized, fine grained, quartz feldspar porphyry dyke. Trace chlorite clasts are locally observed within dyke interval. 1-2 cm, irregular, dark, fine grained , pyrite-bearing clasts are observed within oxidized dyke interval (i.e. 36.30m onwards).							
36.48	37.27	0.79	GRD	MG	Light-medium grey, brecciated interval of quartz feldspar porphyry. Brecciated sections are soft and gougy and appear more oxidized proximal to vein contact. Ankerite veins appear to brecciated clasts in dyke (i.e. 36.83m). Trace disseminated pyrite is locally observed in interval.							

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
37.27	37.36	0.09	VEN	FG	Medium-dark grey, vein zone within granodiorite unit disseminated pyrite is locally observed in vein section. Minor oxidation is present along fracture surfaces.							
37.36	38.71	1.35	GRD	MG	Granodiorite unit exhibiting weak alteration overprinting trace propylitic and phyllic alteration (?) alteration (chlorite clasts occur within interval). Mm-sized, pyrite bearing smoky quartz veinlets occur in interval. Interval is moderately oxidized							
38.71	41.90	3.19	GRD	MG	Moderately oxidized, highly fractured, Argillic and weakly phyllic altered granodiorite unit . Pyrite bearing, smoky and milky quartz veinlets are locally observed in interval. Trace disseminated pyrite is also observed within granodiorite unit (trace phyllic alteration (?). Chlorite clasts are commonly occurring in granodiorite interval (weak propylitic alteration(?)).							
41.90	45.06	3.16	GRD	MG	Light green/beige granodiorite unit exhibiting weak to moderate phyllic alteration overprinting minor propylitic alteration (interval is moderately silicified, contains fine grained disseminated pyrite and trace muscovite crystals are locally observed. Mm-sized quartz veinlets locally brecciate host granodiorite.mm-sized pyrite blebs within quartz are surrounded by tourmaline at 43.80m. Oxidation is observed around quartz veinlets, fractures and joint surfaces.							
45.06	46.14	1.08	VEN	MG	Light green, tan , granodiorite unit exhibiting weak phyllic alteration overprinting trace argillic alteration (sporadic swelled up feldspathic clasts overprinted by silicified, quartz and muscovite bearing granodiorite) Intermittent chlorite clasts are locally observed in interval. Interval contains mm-sized, pyrite bearing, stringer quartz veins that are moderately oxidized on surface. Stringer veins are ~ 50 O TCA							

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
46.14	47.20	1.06	GRD	MG	Weakly to moderately oxidized granodiorite with weak phyllic alteration overprinting local sections of propylitic alteration. Chlorite clasts are commonly occurring in interval. Blebby pyrite and euhedral, cubic pyrite crystals are locally observed within mm-sized quartz veinets and along fracture surfaces (i.e. 46.90m).							
47.20	48.96	1.76	GRD	MG	Light green/tan , granodiorite interval exhibiting weak to moderate phyllic alteration (disseminated and blebby pyrite, weakly to moderately silicified, muscovite crystals locally observed) overprinting weak argillic alteration (note: overprinted argillic alteration appears more prominent compared to previous interval). Tourmaline crystals located near 2-cm (15-20 O TCA) quartz vein is local is present @ 47.82m . Red/brownish , mm-sized sphalerite crystals are locally observed at 48.56m. a 2 cm vuggy quartz vein occurs at 48.33 and contain prismatic quartz crystals along fracture surface.							
48.96	50.73	1.77	GRD	MG	Light green/tan granodiorite exhibiting weak phyllic alteration , propylitic and argillic alteration. Argillic and propylitic alteration appears more prominent compared to previous interval. mm-sized disseminated and blebby pyrite is locally observed in interval. Chlorite clasts are also present throughout unit. Tourmaline crystals are present @ 49m. @ 49.96 a 1-2 cm coloform quartz/cabonitic vein is locally observed (carbonate is likely ankerite and calcite (tan coloured)). Coloform veins appear vuggy, with vugs containing prismatic quartz crystals. Coloform vein brecciates host altered granodiorite unit.							
50.73	51.23	0.50	GRD	MG	Unaltered granodiorite interval containing trace chlorite clasts and trace disseminated pyrite in host rock. Mm-sized, pyrite bearing smoky quartz veinlets appear to crosscut mm-sized milky quartz veins.							

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
51.23	54.71	3.48	GRD	MG	Light green/tan granodiorite unit with weak to moderate phyllic alteration (disseminated pyrite, increased quartz clasts, weakly to moderately silicified granodiorite and basal cleavage, muscovite (?) crystals are locally observed in interval) overprinting weak argillic and propylitic alteration (swelled up feldspathic clasts locally observed as well as chloritized crystals).Mm-sized quartz and smoky quartz veins containing blebby and disseminated pyrite are locally observed throughout unit with some smoky quartz veins crosscutting milky quartz ones (i.e. 54.25m). sub-mm, carbonitic veinlets appear to offset and crosscut pyrite-bearing quartz veins locally.							
54.71	58.14	3.43	GRD	MG	Predominantly unaltered granodiorite interval with patchy zones of weakly phyllic, argillic and propylitic alteration (i.e. 57.60m; chlorite clasts present, muscovite crystals, quartz clasts and trace swelling of feldspathic clasts). A 2 cm, reddish/pink, fine grained aplite dyke intrusion is present at 57.45m. sub-mm, fine grained smoky quartz veinlets are locally observed in unaltered section of granodiorite. (Trace basal cleavage soft crystals are sporadically observed in interval (very weak phyllic alteration remnant(?)).							
58.14	59.23	1.09	GRD	MG	Light grey/ light green, tan interval of granodiorite exhibiting weak to moderate phyllic, weak argillic and propylitic alteration. (chlorite clasts observed, locally silicified zones, muscovite or sericite (?)crystals (soft, basal cleavage crystals)). Blebby and disseminated pyrite is contained within mm-4 cm smoky quartz veins (i.e. 58.92m). Well-developed cubic pyrite crystals are commonly observed along fracture surfaces along veins. Largest pyrite bearing vein is ~ 75 degrees TCA). Sporadic mm-sized ankerite is present within pyrite bearing quartz veins.							
59.23	59.82	0.59	GRD	MG	Interval of unaltered granodiorite containing trace chlorite clasts, and sporadic fine grained disseminated pyrite. Fine grained pyrite is locally observed in sub-mm , dark, fine grained smoky quartz veinlets							

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
59.82	60.33	0.51	GRD	MG	Light green/ tan/ light grey granodiorite with weak phyllic, trace argillic and propylitic alteration. Disseminated and mm-sized pyrite blebs are locally observed within host rock							
60.33	61.91	1.58	GRD	MG	Interval of unaltered granodiorite with trace chlorite clasts and fine grained disseminated pyrite.							
61.91	64.00	2.09	GRD	MG	Granodiorite exhibiting weak phyllic, weak argillic, and trace propylitic alteration. Granodiorite is moderately oxidized and contains mm-sized disseminated and blebby pyrite in host rock and within smoky quartz veins. @ 62.64m a 2 cm quartz/carbonitic vein containing mm-sized cubic pyrite crystals and mm-sized sphalerite crystals is locally observed. Vein appears gougy and micro brecciated. Gougy brecciated seams are observed @ 63.36m as well.							
64.00	66.22	2.22	GRD	MG	Granodiorite interval exhibiting alternating zones of weakly phyllic, argillic and trace propylitic alteration. Mm-sized, pyrite bearing quartz veins are locally observed in interval. Trace, quartz veins appear to microbrecciate granodiorite host.							
66.22	68.14	1.92	GRD	MG	Interval of relatively unaltered granodiorite containing mm-sized, pyrite veins and sporadic 1 cm reddish/pink, fine grained aplite dyke intrusions.							
68.14	68.70	0.56	GRD	MG	Weakly argillic, phyllic and trace propylitic granodiorite interval containing mm-sized disseminated pyrite in host rock and within mm-sized smoky quartz and milky quartz veins.							
68.70	69.22	0.52	GRD	MG	Unaltered section of granodiorite with trace chlorite clasts. Trace pyrite observed in granodiorite and in trace smoky quartz veinlets							
69.22	70.03	0.81	GRD	MG	Small interval of altered granodiorite exhibiting trace phyllic and propylitic alteration. Mm-sized pyrite blebs are locally observed within milky quartz veins.							

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
70.03	72.16	2.13	GRD	MG	Unaltered interval of granodiorite with minor chlorite clasts and mm-sized pyrite bearing quartz veins. A 40 cm section of weakly phyllic , weakly argillic section is locally observed at 71.14-71.48m (disseminated pyrite observed within GND and in mm-sized quartz veinlets.							
72.16	74.66	2.50	GRD	MG	Granodiorite interval displaying trace phyllic, weak propylitic and weak-moderate argillic alteration. Trace disseminated pyrite is locally observed within altered granodiorite interval. mm-1cm, blebby pyrite associated with quartz veins is locally observed.							
74.66	76.00	1.34	GRD	MG	Relatively unaltered granodiorite with patchy zones of trace argillic alteration. At 75.90 a gougy argillic seam is observed (clasts appear to be preferentially aligned ~ 30 degrees TCA; sheared plane(?)). Trace pyrite is observed in sub-mm quartz veinlets.							
76.00	77.62	1.62	GRD	MG	Weakly phyllic, argillic and trace propylitic altered granodiorite interval. From 77-77.32 2-4 mm pyrite bearing, smoky quartz stringer veins are locally observed. Stringer veins are ~ 45 degrees TCA. Trace chlorite clasts are observed in interval							
77.62	78.49	0.87	GRD	MG	Weakly phyllic, argillic and trace propylitic altered granodiorite interval. Pyrite-bearing, smoky quartz veins are less prominent than previous interval.							
78.49	78.84	0.35	GRD	MG	Light grey, light grey, fine grained , moderately silicified, inclusion intruded into altered granodiorite as previous unit.							
78.84	83.19	4.35	GRD	MG	Light grey/ beige, weakly phyllic, propylitic and locally moderate propylitic alteration granodiorite unit. Blebby pyrite is locally observed within quartz/smoky quartz veins and surrounds mm-sized zoned sphalerite crystals contained within milky quartz vein (i.e. 80.47m). Sub-mm carbonitic veinlets appear to sometimes brecciate host rock granodiorite

7.21	14.25	7.04	GRD	GRD	MG	Moderately- oxidized granodiorite interval exhibiting weak propylitic and trace phyllic alteration (?) (rock is greenish contains chlorite clasts, 2-4 mm quartz clasts and trace disseminated pyrite). Sub-mm tourmaline clasts are commonly observed within granodiorite. Minor mm-sized, oxidized veinlets sporadically containing disseminated pyrite are locally observed.
14.25	15.86	1.61	GRD	GRD	MG	Moderately oxidized, fractured, interval of unaltered granodiorite exhibiting trace to minor propylitic alteration locally (minor chlorite clasts observed).
15.86	21.18	5.32	GRD	GRD	MG	Pervasively oxidized granodiorite interval exhibiting weak phyllic alteration overprinting trace argillic alteration sections (quartz clasts observed, muscovite (sericite(?) basal cleavage crystals observed, weakly silicified). Pyrite bearing ,mm-sized, quartz veins are locally observed in interval as well as trace disseminated pyrite in GND. Carbonitic veinlets (likely calcite; moderately reactive to HCL) located near pyrite bearing quartz are present in interval. Rubbly zone observed from 18.40-18.80m
21.18	26.60	5.42	GRD	GRD	MG	Highly fractured, moderately oxidized granodiorite unit exhibiting weak-moderate phyllic alteration (phyllic alteration halo) overprinting trace argillic and propylitic alteration (clay rich, swelled up feldspathic clasts and feldspathic clasts surrounding chlorite crystals are sometimes observed). A rubbly, oxidized section occurs at 21.34-22.01m. Phyllic alteration becomes more prominent proximal to feldspathic dyke contact). Phyllic alteration zones contain quartz clasts, appear weakly to moderately silicified, contain basal-cleavage muscovite crystals and mm-sized pyrite blebs within smoky quartz veins. A gougy, clay rich, brecciated seam is present right at the contact between granodiorite and quartz feldspar porphyry dyke (faulted contact(?)). Quartz vein @ 26.50 brecciates host granodiorite unit.
26.60	29.02	2.42	GRD	DYK	MG	Medium grey/greenish , fine grained quartz feldspar porphyry dyke (quartz clasts locally observed but feldspathic clasts are much more abundant) containing trace chlorite clasts within some feldspar clasts. Trace mm-sized quartz veinlets containing dendritic magnetite are locally observed.
29.02	29.87	0.85	GRD	DYK	MG	Brown/reddish, fine grained, oxidized quartz feldspar porphyry dyke exhibiting brecciation and rubbly zones proximal to contact between dyke and vein contact.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
29.87	31.07	1.20	VEN	VEIN	MG	quartz/pyrite vein zone contained within soft, brecciated medium grey/ greenish, granodiorite host exhibiting weak propylitic and phyllic alteration (i.e. 30.29; chlorite clasts, quartz, muscovite (?) crystal and trace fine grained disseminated pyrite is locally observed in host rock. Proximal to vein zone, dyke is brecciated and rubbly (faulted contact(?). Vein zone appears to be brecciated by milky quartz veins and contain mm-sized pyrite blebs and pyritic disseminations. Some vuggy quartz veinlets are also observed within vein zone . Black fine grained, smoky quartz is present at 30.90 and is brecciated by milky quartz. Fracture surfaces along vein zone are moderately oxidized
31.07	33.12	2.05	FLR	FLT	MG	light to medium grey, fractured, quartz feldspar porphyry dyke interval which is brecciated and gougy proximal to previous vein zone (faulted vein zone footwall (?)). Minor oxidation is observed along fractures and joint surfaces.
33.12	33.74	0.62	VEN	VEIN	MG	Pyrite bearing, milky and smoky quartz, brecciated vein zone included into quartz feldspar porphyry dyke. Disseminated pyrite is locally observed near and within smoky quartz veinlets. Brecciated zones appear gouged near the vein boundary.
33.74	34.77	1.03	GRD	DYK	MG	Light/medium grey, fine grained, brecciated quartz feldspar porphyry dyke interval . Brecciated sections are soft and gougy.
34.77	36.48	1.71	GRD	DYK	MG	Light-medium grey, locally oxidized, fine grained, quartz feldspar porphyry dyke. Trace chlorite clasts are locally observed within dyke interval. 1-2 cm, irregular, dark, fine grained , pyrite-bearing clasts are observed within oxidized dyke interval (i.e. 36.30m onwards).
36.48	37.27	0.79	GRD	DYK	MG	Light-medium grey, brecciated interval of quartz feldspar porphyry. Brecciated sections are soft and gougy and appear more oxidized proximal to vein contact. Ankerite veins appear to brecciated clasts in dyke (i.e. 36.83m). Trace disseminated pyrite is locally observed in interval.
37.27	37.36	0.09	VEN	VEIN	FG	Medium-dark grey, vein zone within granodiorite unit disseminated pyrite is locally observed in vein section. Minor oxidation is present along fracture surfaces.
37.36	38.71	1.35	GRD	GRDA	MG	Granodiorite unit exhibiting weak alteration overprinting trace propylitic and phyllic alteration (?) alteration (chlorite clasts occur within interval). Mm-sized, pyrite bearing smoky quartz veinlets occur in interval. Interval is moderately oxidized
38.71	41.90	3.19	GRD	GRDA	MG	Moderately oxidized, highly fractured, Argillic and weakly phyllic altered granodiorite unit . Pyrite bearing, smoky and milky quartz veinlets are locally observed in interval. Trace disseminated pyrite is also observed within granodiorite unit (trace phyllic alteration (?). Chlorite clasts are commonly occurring in granodiorite interval (weak propylitic alteration(?)).
41.90	45.06	3.16	GRD	GRDA	MG	Light green/beige granodiorite unit exhibiting weak to moderate phyllic alteration overprinting minor propylitic alteration (interval is moderately silicified, contains fine grained disseminated pyrite and trace muscovite crystals are locally observed. Mm-sized quartz veinlets locally brecciate host granodiorite.mm-sized pyrite blebs within quartz are surrounded by tourmaline at 43.80m. Oxidation is observed around quartz veinlets, fractures and joint surfaces.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
45.06	46.14	1.08	VEN	VEIN	MG	Light green, tan , granodiorite unit exhibiting weak phyllic alteration overprinting trace argillic alteration (sporadic swelled up feldspathic clasts overprinted by silicified, quartz and muscovite bearing granodiorite) Intermittent chlorite clasts are locally observed in interval. Interval contains mm-sized, pyrite bearing, stringer quartz veins that are moderately oxidized on surface. Stringer veins are ~ 50 O TCA
46.14	47.20	1.06	GRD	GRDA	MG	Weakly to moderately oxidized granodiorite with weak phyllic alteration overprinting local sections of propylitic alteration. Chlorite clasts are commonly occurring in interval. Blebby pyrite and euhedral, cubic pyrite crystals are locally observed within mm-sized quartz veinets and along fracture surfaces (i.e. 46.90m).
47.20	48.96	1.76	GRD	GRDA	MG	Light green/tan , granodiorite interval exhibiting weak to moderate phyllic alteration (disseminated and blebby pyrite, weakly to moderately silicified, muscovite crystals locally observed) overprinting weak argillic alteration (note: overprinted argillic alteration appears more prominent compared to previous interval). Tourmaline crystals located near 2-cm (15-20 O TCA) quartz vein is local is present @ 47.82m . Red/brownish , mm-sized sphalerite crystals are locally observed at 48.56m. a 2 cm vuggy quartz vein occurs at 48.33 and contain prismatic quartz crystals along fracture surface.
48.96	50.73	1.77	GRD	GRDA	MG	Light green/tan granodiorite exhibiting weak phyllic alteration , propylitic and argillic alteration. Argillic and propylitic alteration appears more prominent compared to previous interval. mm-sized disseminated and blebby pyrite is locally observed in interval. Chlorite clasts are also present throughout unit. Tourmaline crystals are present @ 49m. @ 49.96 a 1-2 cm coloform quartz/cabonitic vein is locally observed (carbonate is likely ankerite and calcite (tan coloured)). Coloform veins appear vuggy, with vugs containing prismatic quartz crystals. Coloform vein brecciates host altered granodiorite unit.
50.73	51.23	0.50	GRD	GRDA	MG	Unaltered granodiorite interval containing trace chlorite clasts and trace disseminated pyrite in host rock. Mm-sized, pyrite bearing smoky quartz veinlets appear to crosscut mm-sized milky quartz veins.
51.23	54.71	3.48	GRD	GRDA	MG	Light green/tan granodiorite unit with weak to moderate phyllic alteration (disseminated pyrite, increased quartz clasts, weakly to moderately silicified granodiorite and basal cleavage, muscovite (?) crystals are locally observed in interval) overprinting weak argillic and propylitic alteration (swelled up feldspathic clasts locally observed as well as chloritized crystals).Mm-sized quartz and smoky quartz veins containing blebby and disseminated pyrite are locally observed throughout unit with some smoky quartz veins crosscutting milky quartz ones (i.e. 54.25m). sub-mm, carbonitic veinlets appear to offset and crosscut pyrite-bearing quartz veins locally.
54.71	58.14	3.43	GRD	GRDA	MG	Predominantly unaltered granodiorite interval with patchy zones of weakly phyllic, argillic and propylitic alteration (i.e. 57.60m; chlorite clasts present, muscovite crystals, quartz clasts and trace swelling of feldspathic clasts). A 2 cm, reddish/pink, fine grained aplite dyke intrusion is present at 57.45m. sub-mm, fine grained smoky quartz veinlets are locally observed in unaltered section of granodiorite. (Trace basal cleavage soft crystals are sporadically observed in interval (very weak phyllic alteration remnant(?)).

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
58.14	59.23	1.09	GRD	GRDA	MG	Light grey/ light green, tan interval of granodiorite exhibiting weak to moderate phyllic, weak argillic and propylitic alteration. (chlorite clasts observed, locally silicified zones, muscovite or sericite (?)crystals (soft, basal cleavage crystals)). Blebby and disseminated pyrite is contained within mm-4 cm smoky quartz veins (i.e. 58.92m). Well-developed cubic pyrite crystals are commonly observed along fracture surfaces along veins. Largest pyrite bearing vein is ~ 75 degrees TCA). Sporadic mm-sized ankerite is present within pyrite bearing quartz veins.
59.23	59.82	0.59	GRD	GRDA	MG	Interval of unaltered granodiorite containing trace chlorite clasts, and sporadic fine grained disseminated pyrite. Fine grained pyrite is locally observed in sub-mm , dark, fine grained smoky quartz veinlets
59.82	60.33	0.51	GRD	GRDA	MG	Light green/ tan/ light grey granodiorite with weak phyllic, trace argillic and propylitic alteration. Disseminated and mm-sized pyrite blebs are locally observed within host rock
60.33	61.91	1.58	GRD	GRDA	MG	Interval of unaltered granodiorite with trace chlorite clasts and fine grained disseminated pyrite.
61.91	64.00	2.09	GRD	GRDA	MG	Granodiorite exhibiting weak phyllic, weak argillic, and trace propylitic alteration. Granodiorite is moderately oxidized and contains mm-sized disseminated and blebby pyrite in host rock and within smoky quartz veins. @ 62.64m a 2 cm quartz/carbonitic vein containing mm-sized cubic pyrite crystals and mm-sized sphalerite crystals is locally observed. Vein appears gougy and micro brecciated. Gougy brecciated seams are observed @ 63.36m as well.
64.00	66.22	2.22	GRD	GRDA	MG	Granodiorite interval exhibiting alternating zones of weakly phyllic, argillic and trace propylitic alteration. Mm-sized, pyrite bearing quartz veins are locally observed in interval. Trace, quartz veins appear to microbrecciate granodiorite host.
66.22	68.14	1.92	GRD	GRDA	MG	Interval of relatively unaltered granodiorite containing mm-sized, pyrite veins and sporadic 1 cm reddish/pink, fine grained aplite dyke intrusions.
68.14	68.70	0.56	GRD	GRDA	MG	Weakly argillic, phyllic and trace propylitic granodiorite interval containing mm-sized disseminated pyrite in host rock and within mm-sized smoky quartz and milky quartz veins.
68.70	69.22	0.52	GRD	GRDA	MG	Unaltered section of granodiorite with trace chlorite clasts. Trace pyrite observed in granodiorite and in trace smoky quartz veinlets
69.22	70.03	0.81	GRD	GRDA	MG	Small interval of altered granodiorite exhibiting trace phyllic and propylitic alteration. Mm-sized pyrite blebs are locally observed within milky quartz veins.
70.03	72.16	2.13	GRD	GRDA	MG	Unaltered interval of granodiorite with minor chlorite clasts and mm-sized pyrite bearing quartz veins. A 40 cm section of weakly phyllic , weakly argillic section is locally observed at 71.14-71.48m (disseminated pyrite observed within GND and in mm-sized quartz veinlets.
72.16	74.66	2.50	GRD	GRDA	MG	Granodiorite interval displaying trace phyllic, weak propylitic and weak-moderate argillic alteration. Trace disseminated pyrite is locally observed within altered granodiorite interval. mm-1cm, blebby pyrite associated with quartz veins is locally observed.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
74.66	76.00	1.34	GRD	GRDA	MG	Relatively unaltered granodiorite with patchy zones of trace argillic alteration. At 75.90 a gougy argillic seam is observed (clasts appear to be preferentially aligned ~ 30 degrees TCA; sheared plane(?)). Trace pyrite is observed in sub-mm quartz veinlets.
76.00	77.62	1.62	GRD	GRDA	MG	Weakly phyllic, argillic and trace propylitic altered granodiorite interval. From 77-77.32 2-4 mm pyrite bearing, smoky quartz stringer veins are locally observed. Stringer veins are ~ 45 degrees TCA. Trace chlorite clasts are observed in interval
77.62	78.49	0.87	GRD	GRDA	MG	Weakly phyllic, argillic and trace propylitic altered granodiorite interval. Pyrite-bearing, smoky quartz veins are less prominent than previous interval.
78.49	78.84	0.35	GRD	GRDA	MG	Light grey, light grey, fine grained , moderately silicified, inclusion intruded into altered granodiorite as previous unit.
78.84	83.19	4.35	GRD	GRDA	MG	Light grey/ beige, weakly phyllic, propylitic and locally moderate propylitic alteration granodiorite unit. Blebby pyrite is locally observed within quartz/smoky quartz veins and surrounds mm-sized zoned sphalerite crystals contained within milky quartz vein (i.e. 80.47m). Sub-mm carbonitic veinlets appear to sometimes brecciate host rock granodiorite
83.19	88.39	5.20	GRD	GRDA	MG	Light grey/ beige, weakly phyllic, propylitic and locally moderate propylitic alteration granodiorite unit
88.39	89.00	0.61	GRD	GRD	MG	mod altered arg and pro grd
89.00	90.91	1.91	GRD	GRD	MG	moderately arg and pro altered grd with 7 small mm scale pyrite bearing quartz veins developed within interval, evenly spaced.
90.91	91.59	0.68	GRD	GRD	MG	weakly arg and pro altered grd
91.59	93.53	1.94	GRD	GRD	MG	relatively unaltered GRD, patchy medium green with patchy pink; minor to trace propylitic alteration throughout interval. Rare stringers crosscutting (less than 1 cm)
93.53	96.18	2.65	GRD	GRDA	MG	weakly argillic and propylitic altered grd
96.18	96.66	0.48	GRD	GRDA	MG	moderately argillic altered grd with medium propylitic overprint
96.66	99.66	3.00	GRD	GRDA	MG	weak to trace agrillic altered grd with trace propylitic alteration relatively unaltered
99.66	101.60	1.94	GRD	GRDA	MG	weak to moderate argillic altered grd
101.60	102.10	0.50	GRD	GRDA	MG	strong argillic alteration with minor propylitic overprint
102.10	103.89	1.79	GRD	GRDA	MG	relativly unaltered grd; trace arg alteration along frx
103.89	104.87	0.98	GRD	GRD	MG	gen lith description
104.87	105.27	0.40	GRD	GRD	MG	strongly argillic altered interval of GRD

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
						LT	WH		CLY	5I	Py	3
						LT	BN					
17.14	17.30	0.16	VEN	FG	galena, pyrite +- chalcopyrite bearing, oxidized, clay altered quartz vein (possibly fault-hosted?) Vein contains subhedral galena intercalated with subhedral pyrite, blebby, up to 0.5 cm by 0.5 cm, trending in a vein set that is 60 ACTA. Intense clay alteration on either side of the vein. Clay minerals contain large amounts of liberated pyrite that are intermingled with the clay minerals. These were likely pyrite hosted in granodiorite that have since been incorporated into the clays during hydrothermal alteration

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
0.00	1.52	1.52	OVB	OVB	--	overburden
1.52	2.50	0.98	GRD	FLTA	MG	relatively competent granodiorite; unaltered
2.50	4.57	2.07	GRD	FLTA	MG	heavily fractured, rubbly, fault gouge granodiorite; completely altered to clay minerals
4.57	6.50	1.93	GRD	FLTA	MG	strongly clay altered granodiorite, completely altered to clays from faulting
6.50	7.04	0.54	GRD	FLTA	MG	semi-competent clay altered fault gouged granodiorite
7.04	8.30	1.26	GRD	GRD	MG	medium grained, medium grey to light grey granodiorite. Lightly clay altered and lightly brecciated
8.30	9.05	0.75	GRD	GRDF	MG	medium grained, light to medium grey, heavily fractured, strongly clay altered granodiorite. No visible sulphide mineralization
9.05	10.13	1.08	GRD	GRD	MG	medium grained, light to medium grey, heavily fractured, strongly clay altered granodiorite. No visible sulphide mineralization. Semi-competent, weaker clay alteration
10.13	11.80	1.67	GRD	FLT	MG	medium grained, heavily clay altered, faulted, heavily fractured granodiorite.
11.80	12.90	1.10	GRD	GRD	MG	light to medium grey granodiorite, relatively unaltered and competent. Three weak 1 mm scale carbonate veinlets run throughout granodiorite.
12.90	14.07	1.17	GRD	GRD	MG	light grey to medium grey, trace light green to pink, weak argillic altered granodiorite with a weak propylitic overprint. Trace mm scale carbonate stringer veinlets occur throughout interval.
14.07	15.00	0.93	GRD	FLT	MG	subcompetent, fractured, weakly arg altered and weakly oxidized granodiorite with minor carbonate veinlets (<1mm) on fracture surfaces.
15.00	15.65	0.65	GRD	FLT	MG	heavily clay altered, fault gouged, medium grey to brown granodiorite with carbonate on fracture surfaces.
15.65	16.53	0.88	GRD	GRD	MG	medium grained, grey to light greyish green, relatively unaltered granodiorite with minor sub-mm carbonate stringer veinlets dispersed throughout interval.
16.53	16.97	0.44	GRD	GRDA	MG	medium grained, tan brown to light brown, heavily oxidized, altered grd with clays replacing feldspar, and weak silicification, large quartz grains up to 5mm in size are present in groundmass of altered granodiorite
16.97	17.14	0.17	VEN	VEIN	FG	hevaily clay altered, gouged material above galena/pyrite+- cp vein. Completely altered and oxidized to clay minerals

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
17.14	17.30	0.16	VEN	VEIN	FG	galena, pyrite +- chalcopyrite bearing, oxidized, clay altered quartz vein (possibly fault-hosted?) Vein contains subhedral galena intercalated with subhedral pyrite, blebby, up to 0.5 cm by 0.5 cm, trending in a vein set that is 60 ACTA. Intense clay alteration on either side of the vein. Clay minerals contain large amounts of liberated pyrite that are intermingled with the clay minerals. These were likely pyrite hosted in granodiorite that have since been incorporated into the clays during hydrothermal alteration
17.30	18.10	0.80	GRD	GRDA	MG	medium grained, tan brown to light brown, heavily oxidized, altered grd with clays replacing feldspar, and weak silicification, large quartz grains up to 5mm in size are present in groundmass of altered granodiorite. Small pyrite-bearing quratz vein 1 cm wide is in this interval
18.10	19.30	1.20	GRD	GRDF	MG	medium grained, light brown to brownish grey, fractured granodiorite with small intevals of intense clay alteration
19.30	19.62	0.32	GRD	GRD	MG	unaltered granodiorite, minor carbonate stringer veinlets throughout
19.62	19.82	0.20	GRD	FLT	MG	faulted, heavily fractured, rubbly granodiorite, orange to bron. Completely clay altered
19.82	20.43	0.61	GRD	GRD	MG	unaltered granodiorite
20.43	21.04	0.61	GRD	GRDF	MG	faulted, heavily fractured granodiorite with limonite alteration on fracture surfaces.
21.04	21.42	0.38	GRD	GRD	MG	unaltered granodiorite
21.42	21.81	0.39	GRD	GRDA	MG	medium grained, light grey to brownish grey, clay altered, weakly brecciated granodiorite, moderately oxidized. Potentially fault hosted.
21.81	23.00	1.19	GRD	GRDA	MG	mdium grained, light grey to brownish grey to tan granodiorite, variably altered with sections of more intense bleaching and oxidation, and sections of more fracture-hosted discrete clay alteration. Inensity of bleaching and oxidation increases as you move deeper in the section, eventually grading into a small oxidized patch at the bottom of the interval. Immediately following, you have a small sulphide veinlet zone, described in the next section.
23.00	23.10	0.10	VEN	VEIN	FG	silicified section of granodiorite. Not quite a vein, gradational on either side, but in the centre of the interval is a 3cm wide heavily siliceous zone that hosts disseminated pyrite +- galena (or a fine-grained greyish black sooty mineral).
23.10	24.50	1.40	GRD	GRDA	MG	medium grained, whitish grey to medium grey, argillic altered granodiorite with minor zones of complete clay alteration and heavy fracturing (faults?)
24.50	25.20	0.70	GRD	GRD	MG	unaltered granodiorite with weak mm wide carbonate strigner veinlets throughout
25.20	26.00	0.80	GRD	GRDA	MG	weakly arg altered granodiorite
26.00	28.57	2.57	GRD	GRDA	MG	faulted, completely clay altered granodiorite

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
28.57	28.80	0.23	GRD	GRDA	MG	orangeish brown, heavily oxidized and clay altered granodiorite with complete clay alteration of feldspar.
28.80	29.10	0.30	VEN	VEIN	MG	pyrite bearing, clay altered, quartz vein breccia with patch blebs of disseminated pyrite throghout. When rock is competent, it is heavily clay altered. Section is mostly rubbly, with intense whitish clay alteration +- quartz +- pyrite found throughout. Sericite alteration present in host rock
29.10	29.50	0.40	GRD	GRDF	MG	heavily fractured, clay altered, bleached granodiorite. Very rubbly section, likely a fault related to mineralization above
29.50	31.23	1.73	GRD	GRDF	MG	fractured, rubbly granodiorite. Possibly faulted
31.23	31.53	0.30	GRD	GRDA	MG	bleached, clay altered granodiorite, whitish brown to tan brown. Semi competent
31.53	31.84	0.31	GRD	GRD	MG	relatively unaltered granodiorite. Weak carbonate stringers throughout (mm-scale)
31.84	32.25	0.41	GRD	GRDF	MG	faulted, oxidized grd with minor pyrite stringer veinlets (mm-scale) throughout. I
32.25	32.80	0.55	GRD	VEIN	MG	vein breccia developed within faulted interval of granodiorite. Clay altered and bleached and oxidized, with blebby patches of pyrite alteration. Weakly brecciated section related to faulting.
32.80	33.40	0.60	GRD	GRDF	MG	clay altered granodiorite underneath vein breccia. Likely a fault breccia
33.40	33.70	0.30	GRD	GRDA	MG	bleached altered granodiorite with weak pyrite stringers (set of 3) in interval
33.70	34.30	0.60	GRD	GRDA	MG	weakly silicified relatively unaltered granodiorite
34.30	34.80	0.50	GRD	GRDA	MG	PRO and clay altered granodiorite, bleached and oxidized
34.80	35.00	0.20	GRD	GRDA	MG	faulted granodiorite, heavily clay altered and rubblt
35.00	35.52	0.52	GRD	GRDA	MG	relatively unaltered granodiorite with minor disseminated pyrite throughout and rare mm scale carbonate stringers
35.52	36.90	1.38	GRD	GRDA	MG	bleached, argillic altered grd with a propylitic overprint. Patchy oxidative staining on fresh surface. Moderate clay alteration confined to fracture surfaces, potentially related to faulting.
36.90	37.90	1.00	GRD	GRDA	MG	patchy OX stained granodiorite, variably silcified, with a weak propylitic overprint of argillic alteration
37.90	39.27	1.37	GRD	GRDA	MG	bleached, oxidized, clay altered, competent granodiorite. Weakly fractured and weak clay alteration
39.27	39.62	0.35	GRD	GRDA	MG	heavily clay altered granodiorite, higher density of fractures, possibly fualted
39.62	40.62	1.00	GRD	GRDA	MG	brown to light greyish green, altered grd. Semicompetent and weak pro overprint of argillic alteration

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
40.62	40.72	0.10	GRD	GRDA	MG	propylitic altered granodiorite
40.72	40.82	0.10	GRD	GRDA	MG	propylitic altered grd being overprinted by phyllic alteration, related to a small 2cm wide pyrite bearing quartz vein with sooty grey, hematite stained grunge on ein margin.
40.82	41.00	0.18	GRD	GRDA	MG	apropylitic altered granodiorite with weak mm scale pyrite stringers
41.00	43.00	2.00	GRD	GRDA	MG	bleached, oxidized, semicompetent granodiorite with weak clay alteration and sparse fractures throughout.
43.00	43.65	0.65	GRD	GRDA	MG	light to medium grey granodiorite with weak carbonate stringer veinlets throughout
43.65	44.20	0.55	GRD	GRDA	MG	whitish grey to greenish grey altered granodiorite with strong argillic alteration with a moderate propylitic overprint.
44.20	45.45	1.25	GRD	GRDA	MG	medium grey to light brown, heavily fractured granodiorite with mm to cm scale hi angle (15 ACTA) carbonate veinlets
45.45	46.00	0.55	GRD	GRDF	MG	heavily clay altered, weakly brecciated granodiorite (fault breccia)
46.00	47.24	1.24	GRD	GRDA	MG	medium grey to light grey, clay altered, argillic altered with weak pro overprint, granodiorite with m scale carbonate stringer veinlets.
47.24	50.00	2.76	GRD	GRD	MG	medium grey, relatively unaltered granodiorite. Trae mm scale carbonate veinlets on frx surfaces
50.00	50.50	0.50	GRD	GRDA	MG	light grey to green propylitic altered granodiorite with 3 pyrite bearing quartz veins (1 cm wide each).
50.50	51.50	1.00	GRD	GRDA	MG	medium grey weakly pro altered grd with minor carb veinlets running throughout interval (m-scale)
51.50	51.82	0.32	GRD	GRDF	MG	rubbly, faulted, altered granodiorite with heavy clay alteration, likely a fault
51.82	52.50	0.68	GRD	GRDA	MG	moderate argillic alteration with a weak propylitic overprint, semi-competent granodiorite with few fractures
52.50	54.00	1.50	GRD	GRDF	MG	fractured, rubbly, clay altered, bleached, oxidized granodiorite with trace disseminated patchy bebby pyrite striger vienlets throughout interval (trace - only 4 identified - mm scale).
54.00	54.31	0.31	GRD	GRDA	MG	weakly silicified, moderately argillic altered with a moderate propylitic overprint granodiorite. Disseminated pyrite in 1mm pyrite veinlets
54.31	55.72	1.41	GRD	GRDA	MG	weakly arg/pro altered grd with rare carb veinlets found throughout
55.72	56.00	0.28	GRD	GRDA	MG	stringer veinlet zone containing three 1 mm wide stringer veinlets of pyrite-bearing quartz. Host rock is weakly arg/pro altered grd
56.00	57.00	1.00	GRD	GRDA	MG	weakly argillic altered grd with a moderate propylitic overprint. Trace fresh biotite. Minor dissem Py throughout interval
57.00	57.40	0.40	GRD	GRDA	MG	faulted, rubbly grd with moderate arg and pro alteration

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
57.40	58.10	0.70	GRD	GRDA	MG	semi competent relatively weakly altered grd
58.10	58.45	0.35	GRD	GRDA	MG	faulted, rubbly grd with moderate arg and pro alteration
58.45	61.50	3.05	GRD	GRD	MG	medium grained, medium grey, unaltered granodiorite. Rare carbonate stringer veinlets (mm-size). Very weak propylitic alteration disseminated throughout
61.50	63.46	1.96	GRD	GRDA	MG	light grey to light green altered granodiorite. Weak propylitic alteration overprinting weak argillic alteration. Minor pyrite devleoped along rare fractures
63.46	64.82	1.36	GRD	GRDA	MG	light grey to greyish brown, clay altered, faulted, weakly brecciated granodiorite with quartz clasts and disseminated blebs of pyrite throughout interval.
64.82	66.43	1.61	GRD	GRDA	MG	clay altered granodiorite; strong. Minor disseminated pyrite found throughout in mm-scale veinlets
66.43	67.23	0.80	GRD	GRDA	MG	weakly clay altered, semi competent granodiorite with patchy clasts of greenish altered volcanic up to 3 cm by 3 cm (subrounded).
67.23	68.00	0.77	GRD	GRDA	MG	greenish to tan brown altered granodiorite with moderate propylitic alteration
68.00	68.80	0.80	GRD	GRDA	MG	clay altered whitish brown granodiorite with rare (3 subrounded greenish volcanic clasts)
68.80	70.00	1.20	GRD	GRDA	MG	clay altered light white to tan granodiorite with two bounding high angle fractures on either side of interval, where there is intense clay alteration and weak brecciation on both upper and lower contacts
70.00	71.63	1.63	GRD	GRDA	MG	clay altered granodiorite with patchy oxide staining and weak clay alteration throughout interval
71.63	72.00	0.37	GRD	GRDA	MG	strongly clay altered and rubbly granodiorite, potentially faulted.
72.00	72.42	0.42	GRD	GRDF	MG	unaltered granodiorite
72.42	73.00	0.58	GRD	GRDF	MG	altered rubbly faulted granodiorite.
73.00	73.37	0.37	GRD	GRDF	MG	unaltered granodiorite
73.37	74.00	0.63	GRD	GRDF	MG	altered rubly faulted granodiorite. Heavily clay altered and fault gouged
74.00	76.16	2.16	GRD	GRD	MG	medium grained, weakly carbonate altered and patchy oxidized granodiorite. Relatively unaltered except for a few mm-scale carbonate stringer veinlets running through unaltered granodiorite.
76.16	77.23	1.07	GRD	GRDA	MG	medium grained, light tan brown to medium grey, propylitic altered granodiorite with weak argillic alteration. Rare pyrite bearing stringers that are 80 ACTA (only two observed in interval)

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
77.23	77.53	0.30	VEN	VEIN	FG	finegrained quartz vein with disseminated pyrite along vein margin with galena nucleating off of pyrite grains. At least 3 phases of fluid pulsing here. Initially, the quartz/carbonate veinlet, secondary is the pyrite on vein margins, and third is the galena after pyrite.
77.53	78.25	0.72	GRD	GRDA	MG	bleached, oxidized, clay altered granodiorite with a weak propylitic overprint.
78.25	80.00	1.75	GRD	GRD	MG	medium grained dark grey unaltered granodiorite.
80.00	80.10	0.10	GRD	GRD	MG	propylitically altered granodiorite with small 1 cm wide pyrite bearing quartz vein in centre of interval.
80.10	82.50	2.40	GRD	GRD	MG	medium grained dark grey unaltered granodiorite.
82.50	83.00	0.50	GRD	GRD	MG	propylitically altered grd with mm scale carbonate quartz veinlets running 60 ACTA.
83.00	86.44	3.44	GRD	GRD	MG	medium grained dark grey unaltered granodiorite.
86.44	87.30	0.86	GRD	GRD	MG	medium grained weakly propylitically altered granodiorite.
87.30	91.14	3.84	GRD	GRD	MG	medium grained medium grey granodiorite with trace pyrite bearing mm scale quartz stringers near the end of the interval.
91.14	93.54	2.40	GRD	GRD	MG	medium grained medium grey granodiorite with weak mm scale pyrite stringers developed 60 ACTA, evenly spaced roughly 5 cm apart. Weak propylitic alteration persists throughout interval
93.54	93.93	0.39	GRD	GRDA	MG	moderately argilli caltered grd with a weak propylitic overprint.
93.93	95.44	1.51	GRD	GRDA	MG	reltaively unaltered granodiorite, trace arg alteration
95.44	95.72	0.28	GRD	GRDA	MG	1 cm wide carbonate veinlet from 95.63 to 95.65 with trae disseminated pyrite along margin. Enveloping the vein on 10 each side is propylitic alteration grading out into argillic alteratoin
95.72	102.08	6.36	GRD	GRD	MG	medium grained, medium grey "salt and pepper" granodiorite, relatively unaltered with minor mm scale carbonate/chlorite veinlets with very trace disseminated pyrite
102.08	102.62	0.54	GRD	GRDA	MG	light grey to green granodiorite with weak to moderate argillic alteration and 1 1 cm wide carbonate veinlet with very trace dissem PY along margin
102.62	106.60	3.98	GRD	GRD	MG	medium grey, relatively unaltered granodiorite. Trace mm scale veinlets that contain disseminated pyrite (rare), are sparse. Weak oxidation and clay alteration on sparse rare fractures throughout interval.
106.60	106.92	0.32	GRD	GRDA	FG	medium green, fine grained, heavily propylitically altered granodiorite with vein material from 106.78 to 106.98 containing cubic subhedral pyrite and subhedral blebs of galena, carbonate clay alteration above the first vein (4 cm wide) and the second vein (5 cm wide). Weak argillic alteation overprinted by moderate to strong propylitic alteration. Moderate argillic alteration extends for 1 m below the two veins.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
106.92	108.00	1.08	GRD	GRDA	MG	medium gained light white to light grey argillic altered granodiorite. Weak propylitic overprint.
108.00	108.35	0.35	VEN	VEIN	MG	medium grained, propylitically altered grd with a small 3 cm wide quartz carbonate vein containing blebby smeared sphalerite and dissminated blebby pyrite, granodiorite areound the veinlet up to 15 cm on either side is moderately propylitically altered with minor weak argillic alteration.
108.35	109.43	1.08	GRD	GRDA	MG	weak argillic altered granodirotie with a moderate propylitic overprint. Weakly silicified, with a few mm scale pyrite filled veinlets that coincide with increasing intensity of propylitic alteration.
109.43	109.94	0.51	GRD	FLTM	MG	clay altered, medium grey to brown, sulphide bearing gouge, likely related to faulting, Iron carbonate alteration coincides with clay gouge rubble. Weak sericite alteration comes with the clay. Sulphide is mostly disseminated pyrite with minor fine-grained black to sooty grey mineral - possibly a sulfosalt or fine-grained galena.
109.94	111.60	1.66	GRD	GRDA	MG	propylitically altered medium grey to light green granodiorite overprinting trace argillic alteration. Weak silicification accompanies stronger propylitic alteration and coincides with a greater percentage of disseminated pyrite.
111.60	111.92	0.32	VEN	VEIN	FG	fine-grained quartz carbonate vein with blebby veinlets of sphalerite, galena, and pyrite.
111.92	114.13	2.21	GRD	GRDA	MG	moderately argillic altered granodiorite
114.13	114.32	0.19	GRD	GRDA	MG	modeate propylitic altered grd, light green to grey
114.32	114.38	0.06	VEN	GRDA	FG	6 cm wide quartz carbonate vein with galena, sphalerite and pyrite.
114.38	114.81	0.43	GRD	GRDA	MG	propylitic altered grd with siliceous alteration
114.81	115.13	0.32	FLT	GRDA	FG	gouged rubbly fault zone, light wht to brn with sericite alteration and oxidation
115.13	116.00	0.87	GRD	GRDA	MG	rubbly faulted unaltered granodiorite
116.00	118.50	2.50	GRD	GRDA	MG	light white to green altered argillic with a weak propylitic overprint granodiorite.
118.50	119.90	1.40	GRD	GRD	MG	unaltered, medium grey granodiorite
119.90	120.40	0.50	GRD	GRD	MG	altered, rubbly argillic granodiorite
120.40	123.51	3.11	GRD	GRD	MG	unaltered, medium grey granodiorite
123.51	123.68	0.17	GRD	GRD	MG	argillic altered grd with moderate propylitic overprint.
123.68	126.49	2.81	GRD	GRD	MG	unaltered, medium grey granodiorite

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
0.00	1.52	1.52	OVB	--	overburden							
1.52	7.04	5.52	GRD	MG	Medium grained, medium grey to light grey to light greenish grey, heavily clay-altered, fault gouged granodiorite. Discrete intervals of complete clay alteration and fault gouge, as well as more competent partially clay-altered intervals occur throughout. Weak to moderate argillic alteration and weak propylitic alteration occur throughout interval. Heavily fractured and sections of interval have heavy core loss. From 3.05 to 4.57 there is ~50 cm of core loss.

16.29	18.00	1.71	GRD	GRDA	MG	unaltered granodiorite.
18.00	20.00	2.00	GRD	GRDA	MG	orange / pink weathered granodiorite with underlying agrillic alteration that has been overprinted by oxidation. Minor carbonate stringers and veinlets crosscutting at 65TCA.
20.00	22.35	2.35	GRD	GRD	MG	Fresh looking, competent and unaltered (trace propylitic) granodioroite.
22.35	23.83	1.48	GRD	GRDA	MG	orange / pink weathered granodiorite. Minor carbonate stringers and veinlets crosscutting at 65TCA.
23.83	34.75	10.92	GRD	GRD	MG	Unaltered granodiorite with sporadic patch zone of weathered granodiorite that has underlying kaolinitic argillic alteration. Fractured zones in weathered/argillic zones have limonitic and goethite filled fracture surfaces.
34.75	35.12	0.37	GRD	GRD	MG	argillic altered granodiorite that has been overprinted by weak weathering. Feldpsar clasts are bleached white and very swollen. Limonite and goethite found in fractures.
35.12	36.00	0.88	GRD	GRD	MG	Unaltered granodiorite with sporadic patch zone of weathered granodiorite that has underlying kaolinitic argillic alteration. Fractured zones in weathered/argillic zones have limonitic and goethite filled fracture surfaces.
36.00	37.35	1.35	GRD	GRDA	MG	Argillic altered granodiorite that is weathered to light/medium orange pervasively throughout. Intervals of fresh alrgillic alteration is presnt that has weak propylitic overprinting. Strongly fractured throughout, with oxidation along fracture planes (1cm halo). Oxidized vein (~5cm) cuts granodiorite.
37.35	38.17	0.82	GRD	GRDA	MG	weakly propylitic altered granodiorite with minor argillic alteration patch that carries oxidized fractures (1cm halo on average).

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
38.17	38.34	0.17	VEN	GRDA	FG	oxidized vein cutting propylitic altered granodioroite.
38.34	42.30	3.96	GRD	GRDA	MG	Argillic altered granodiorite that is weathered to light/medium orange pervasively throughout. Intervals of fresh alrgillic alteration is presnt that has weak propylitic overprinting. Strongly fractured throughout, with oxidation along fracture planes (1cm halo). Oxidized vein (~5cm) cuts granodiorite.
42.30	58.27	15.97	GRD	GRD	MG	Widespread zone of unaltered granodiorite that has sporadic intervals of weakly argillic/propylitic alteration. Minor carbonate veining crusscuts unit sporadically throughout as veinlets and microfracture infill locally. Magnetic mafic clasts found within granodiroite.
58.27	60.00	1.73	GRD	GRDA	MG	Weak to moderately argillic altered granodiorite with zones of weak propylitic overprinting found in proximity to fine grained, pink to light brown aplite dykes that cut GRD (65 TCA)
60.00	60.25	0.25	GRD	GRDA	MG	strongly fractured zone of argillic/propylitic altered GRD. Minor smokey fractures and stringers resent within.
60.25	64.01	3.76	GRD	GRDA	MG	Weak to moderately argillic altered granodiorite with zones of weak propylitic overprinting found in proximity to fine grained, pink to light brown aplite dykes that cut GRD (65 TCA)
64.01	66.70	2.69	GRD	GRD	MG	unaltered granodiorite with trace (very trace) propylitic alteration. Minor argillic alteration along fracture planes that has decomposing clays.
66.70	67.78	1.08	GRD	GRDM	MG	bleached white to faint green coloured, moderately to strongly argillic altered granodiorite with weak propylitic overprinting. Argillic zone has medium pink aplite dyke cutting (see secondary).
67.78	73.15	5.37	GRD	GRDM	MG	Light to medium green, intermixed phyllic to propylitic altered granodiorite. Alteration zone has disseminated pyrite found throughout, as well as in sporadic quartz and quartz carbonate veinlets and stringers found within. Fine grained, pink aplite dykes cut granodiorite locally. Minor patches of argillic alteration occur sporadically throughout. Rubbly fracture zone present for 1.5m along start of interval (67.8-69.2m).
73.15	75.90	2.75	GRD	GRDM	MG	Interval of alternating weak to moderate argillic alteration, weak phyllic alteration and unaltered granodiorite with pink feldspar grains.
75.90	77.87	1.97	GRD	GRDM	MG	Interval of argillic to phyllic/propyllitic altered granodiorite. Argillic alteration is largely overprited by propylitic alteration (white clay altered clasts are altered to light green colour, along with chloritic green groundmass). 70cm zone of fractured and rubbly, fine grained dyke and clay gouge present within (may be fault, but only has partial gouge infill.
77.87	90.50	12.63	GRD	GRDA	MG	Moderate to locally strong argillic altered granodiorite with intermittent patches of trace to weak propylitic alteration, up to 70cm wide. Minor clay and carbonate stringers present. Argillic alteartion does not completely replace all grains within GRD matrix, leaving only partial clay alteation zones that have a washed/bleached appearance.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
90.50	97.54	7.04	GRD	GRDA	MG	Weak to moderate propylitic altered granodiorite with potentially trace phyllic alteration (?) (most grains have chlorite alteration, but there are zones of disseminated pyrite and possible sericite(?)). Locally fractured with minor seams of narrow clay infil (grey). Quartz carbonate stringers cutting throughout along with a fine grained black mineral that resembles the look of tourmaline(?) but is found infilling stringer zones.
97.54	99.75	2.21	GRD	GRDA	MG	argillic to trace potassic altered granodiorite (pink feldpsar colouration) with alternating unaltered / fresh granodiorite within. Minor quartz carbonate stringers and veinlets present. Fine grained, pink aplite dyke (16cm) cuts GRD.
99.75	104.00	4.25	GRD	GRDA	MG	Fresh looking granodiorite with intermixed zones of argillic and propylitic alteration (overprinting also present, along with seperately altered zones). Minor black magnetic fragments found in GRD.
104.00	111.53	7.53	GRD	GRDA	MG	Dominantly weak, ranging to moderately propylitic altered granodirite with sporadic argillic alteration zones (weak). Chlorite alteration replaces most feldspar clasts in GRD.
111.53	112.00	0.47	FLT	FLT	--	Faulted and gouged fault zone consisting of micro fragments (<0.5cm) of propylitic altered granodiorite. Footwall of fault hosts a 5cm quartz-smokey quartz-carbonate vein with sulphide veining. Fault appears ~80TCA.
112.00	112.18	0.18	VEN	FLT	FG	Smokey quartz-ankerite vein that is highly fractured, found along the footwall of fault zone. Vein hosts disseminated pyrite.
112.18	116.50	4.32	GRD	GRDA	MG	Weakly propylitic altered granodiorite with local potassic and argillic altered intervals (trace), with intermittent areas of moderately propylitic altered granodiorite. Potassic alteration is weak, appearing as minor pink potassic staining of feldspars, while argillic alteration is typically confined to localized fracture zones.
116.50	118.49	1.99	GRD	GRDA	MG	Moderately propylitic altered granodiorite within interval of trace propylitic and potassic alteration
118.49	132.62	14.13	GRD	GRDA	MG	Weakly propylitic altered granodiorite with local potassic and argillic altered intervals (trace), with intermittent areas of moderately propylitic altered granodiorite. Potassic alteration is weak, appearing as minor pink potassic staining of feldspars, while argillic alteration is typically confined to localized fracture zones.
132.62	133.46	0.84	FLT	GRDA	MG	zone of faults crossing propylitic altered granodiorite. Faults are identified by thin gouged and rubby fracture zones, which have smokey quartz and pyrite disseminated along contacts. 5 fault structures present in interval (1-4cm wide).
133.46	151.83	18.37	GRD	GRDA	MG	Weakly propylitic altered granodiorite with local potassic and argillic altered intervals (trace), with intermittent areas of moderately propylitic altered granodiorite. Potassic alteration is weak, appearing as minor pink potassic staining of feldspars, while argillic alteration is typically confined to localized fracture zones.
151.83	153.00	1.17	GRD	GRDM	MG	Moderately propylitic to weakly phyllic altered granodiorite with disseminated pyrite throughout. Gouged quartz veins cut granodiorite, along with fine grained green dyke.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
153.00	179.64	26.64	GRD	GRD	MG	Granodiorite ranging from fresh to weakly propylitic altered, with weak to trace localized potassic and argillic altered intervals. Intermittent areas of moderately propylitic altered granodiorite are present within, but rare. Potassic alteration is weak, appearing as minor pink potassic staining of feldspars, while argillic alteration is typically confined to localized fracture zones. Minor magnetite flooding is present locally, along with mafic clasts in the granodiorite.
179.64	194.16	14.52	GRD	GRDA	MG	Unaltered granodiorite with sporadic patch zone of weathered granodiorite that has underlying kaolinitic argillic alteration. Fractured zones in weathered/argillic zones have limonitic and goethite filled fracture surfaces.
194.16	198.00	3.84	GRD	GRD	MG	Unaltered, competent granodiorite with minor fine grained pink aplite dykes cutting.
198.00	204.05	6.05	GRD	GRDA	MG	Propylitic altered granodiorite with sporadic argillic Granodiorite with alteration that ranges from dominantly propylitic (weak to moderate), to weakly/moderately argillic altered granodiorite with weak propylitic overprinting. GRD is highly fractured in particular intervals. Quartz carbonate veining bearing pyrite and other minor sulphdies are present locally.
204.05	205.83	1.78	GRD	GRD	MG	Granodiorite with trace propylitic alteration.
205.83	216.53	10.70	GRD	GRDA	MG	Propylitic altered granodiorite with sporadic argillic Granodiorite with alteration that ranges from dominantly propylitic (weak to moderate), to weakly/moderately argillic altered granodiorite with weak propylitic overprinting. GRD is highly fractured in particular intervals. Quartz carbonate veining bearing pyrite and other minor sulphdies are present locally.
216.53	218.62	2.09	GRD	GRD	MG	Granodioroite with trace to no propylitic alteration.
218.62	223.52	4.90	GRD	GRDA	MG	moderately propylitic altered granodiorite that alternates with weakly altered zones. Minor veining and dykes within.
223.52	226.12	2.60	GRD	GRDA	MG	moderate to strongly argillic altered granodiorite. Minor highly fractured and decomposed zones present within.
226.12	227.20	1.08	FLT	FLTM	MG	Faulted and rubbly propylitic altered granodiorite. Fault zone contains gouged and swollen dark grey quartz vein zones that host disseminated pyrite, sphalerite. Arsenopyrite may be present.
227.20	237.00	9.80	GRD	GRDA	MG	Propylitic altered granodiorite with sporadic argillic Granodiorite with alteration that ranges from dominantly propylitic (weak to moderate), to weakly/moderately argillic altered granodiorite with weak propylitic overprinting. GRD is highly fractured in particular intervals. Quartz carbonate veining bearing pyrite and other minor sulphdies are present locally.
237.00	242.30	5.30	GRD	GRD	MG	Granodioroite with trace to no propylitic alteration.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
242.30	251.23	8.93	GRD	GRDA	MG	Propylitic altered granodiorite with sporadic argillic Granodiorite with alteration that ranges from dominantly propylitic (weak to moderate), to weakly/moderately argillic altered granodiorite with weak propylitic overprinting. GRD is highly fractured in particular intervals. Quartz carbonate veining bearing pyrite and other minor sulphdies are present locally.
251.23	252.00	0.77	GRD	GRDM	MG	weak to moderately phyllic/propylitic altered granodiorite that is fractured throughout and contains minor rubbly and gouge seams. Interval has veinlets, stringers and microfracturs throughout that are mineralized with pyrite and carbonate. Forms the hangingwall sulphide halo of deeper mineralized zone.
252.00	254.90	2.90	FLR	VEIN	MG	Phyllic altered granodiorite that is part of a faulted, fractured vein zone. Vein zone is breacciated, consisting of a dense network of mineralized fractures, veinlets and stringers throughout that are chaotic in their orientation and form a net textured interval. Fractures and rubbly gouge and present as thin seams throughout the interal. Veins range from quartz to smokey quartz to quartz carbonate. Pyrite is the dominant mineral, along with ankerite and carbonate gangue. Minor disseminated sphalerite (black zoning into honey brown), galena, and arsenopyrite is present throughout.
254.90	255.70	0.80	FLR	FLT	FG	light grey to green rubbly and clay gouged fault zone with a lense of k-spar rich granodioriote (potassic). Fault zone is 30TCA in hangingo wall and footwall contacts.
255.70	256.60	0.90	GRD	GRDA	MG	Propylitic altered granodiorite with sporadic argillic Granodiorite with alteration that ranges from dominantly propylitic (weak to moderate), to weakly/moderately argillic altered granodiorite with weak propylitic overprinting. GRD is highly fractured in particular intervals. Quartz carbonate veining bearing pyrite and other minor sulphdies are present locally.
256.60	258.00	1.40	GRD	GRDA	MG	argillic altered granodiorite with hematitic alteration along fracture planes.
258.00	263.34	5.34	GRD	GRDA	MG	Propylitic altered granodiorite with sporadic argillic Granodiorite with alteration that ranges from dominantly propylitic (weak to moderate), to weakly/moderately argillic altered granodiorite with weak propylitic overprinting. GRD is highly fractured in particular intervals. Quartz carbonate veining bearing pyrite and other minor sulphdies are present locally.
263.34	263.81	0.47	QFP	DYK	FG	Strongly fractured and rubbly, light brown quartz feldpar porphyry dyke. Fine grained quartz eyes present throughout. Mineralization in the form of weak vein breccia zones are found along the hanging wall and footwall of dyke. Contacts too fractured to get angle.
263.81	265.46	1.65	GRD	GRDM	MG	Weakly phyllic to propylitic altered granodiorite found above massive sulphide vein zone. Granodiorite interval is mineralized throughout, consisting of veinlets and stringers throughout that form a weak net textured interval. Fractures and rubbly gouge and present as thin seams throughout the interal. Veins range from quartz to smokey quartz to quartz carbonate. Pyrite is the dominant mineral, along with ankerite and carbonate gangue.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
265.46	266.60	1.14	FLT	FLTM	FG	Rubbly and faulted granodiorite vein zone (Same as above) that is soft and decomposing. Dissemianted pyrite and trace arsenopyrite/galena is present scattered amongst mineralized fault zone.
266.60	266.69	0.09	VEN	VEIN	CG	Massive sulphide vein zone consisting of three massive sulphide veins (11, 17, 31cm) and smaller intermittent stringers and veinlets of massive sulphide found between, in zones of grey (sericite or quartz flooding) to green altered granodiorite. Massive sulphide veins host massive galena enveloped by red to black sphalerite and intermixed pyrite and arsenopyrite. Carbonate, in the form of white and tan (ankerite) is found as blebs within the massive sulphide quartz veins, and as an ankerite vein with massive galena along the footwall contact of the vein zone. Massive sulphide stringers consisting of sphalerite, galena, pyrite and arsenopyrite eminate from the massive sulphide veins, with dissemianted sulphide (dominantly pyrite) found between major zones.
266.69	266.83	0.14	VEN	VEIN	CG	Massive sulphide vein cutting at 55TCA
266.83	267.28	0.45	VEN	VEIN	CG	granodiorite with massive sulphide stringers and disseminated pyrite throughout.
267.28	267.73	0.45	VEN	VEIN	CG	Massive sulphide vein cutting at 70TCA
267.73	268.15	0.42	GRD	GRDM	CG	Propylitic to phyllic altered granodiorite with disseminated pyrite throughout.
268.15	268.22	0.07	VEN	VEIN	CG	Massive sulphide vein cutting at 72TCA. Vein crosses phyllic altered granodiorite with minor argillic gouge along footwall. Vein consists of massive galena, sphalerite, arsenopyrite and pyrite.
268.22	269.65	1.43	GRD	GRDM	MG	Propylitic to phyllic altered granodiorite with disseminated pyrite throughout. Mineralized stringers and veinlets crosscut granodiorite sproadically. Argillic and decomposing clay altered zone found within.
269.65	272.43	2.78	GRD	GRDA	MG	Propylitic altered granodiorite with sporadic argillic alteration within. Quartz carbonate veining bearing pyrite and other minor sulphdies are present locally.
272.43	272.61	0.18	VEN	VEIN	MG	Quartz carbonate vein brecia zone cutting altered granodiorite. Vein consists of intermixed white carbonate and tan ankerite within quartz, which hosts blebby to semi massive arsenopyrite, sphalerite, galena and pyrite. Vein cuts 40TCA. Argillic and rubbly hanging wall granodiorite contact.
272.61	275.45	2.84	FLT	FLTM	MG	Alternating zones of decomposing and strongly fractured/rubbled fault zones (with sporadic dissemianted mineralization) and strongly altered and bleached granodiorite (propylitic and minor argillic).
275.45	287.40	11.95	GRD	GRDA	MG	Propylitic altered granodiorite with sporadic argillic Granodiorite with alteration that ranges from dominantly propylitic (weak to moderate), to weakly/moderately argillic altered granodiorite with weak propylitic overprinting. GRD is highly fractured in particular intervals. Quartz carbonate veining bearing pyrite and other minor sulphdies are present locally.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
287.40	291.00	3.60	GRD	GRDA	MG	Light to medium green, weakly to moderately propylitic altered granodiorite with a K-spar rich potassic altered interval within. Unit is fractured and friable. Minor carbonate stringers within, but overall sulphide contentent is very minimal.
291.00	292.00	1.00	GRD	GRDA	MG	K-spar rich zone within propylitic altered granodiorite. Entire section has pink alteration.
292.00	292.58	0.58	GRD	GRDA	MG	Light to medium green, weakly to moderately propylitic altered granodiorite with a K-spar rich potassic altered interval within. Unit is fractured and friable. Minor carbonate stringers within, but overall sulphide contentent is very minimal.
292.58	293.40	0.82	FLT	FLTA	MG	Medium green propylitic altered granodiorite that is strongly rubbled and fractured. Represents a likely faut zone. Soft black quartz breccia stringer is present within at 30tCA.
293.40	303.00	9.60	GRD	GRDA	MG	Propylitic altered granodiorite with sporadic argillic Granodiorite with alteration that ranges from dominantly propylitic (weak to moderate), to weakly/moderately argillic altered granodiorite with weak propylitic overprinting. GRD is highly fractured in particular intervals. Quartz carbonate veining bearing pyrite and other minor sulphdies are present locally.
303.00	304.45	1.45	FLT	FLT	MG	Low angle clay gouged fault zone cutting light green, trace propylitic altered granodiorite. No slicks present, but it is easy to tell offset has taken place.
304.45	305.41	0.96	FLT	FLTM	FG	Clay gouged and faulted zone of granodiorite with minor sulphides within. Black gouge zones are present with disseminated pyrite within. Faulting appears to follow 35TCA. See secondary structures for mineralized black gouge zones.
305.41	316.99	11.58	GRD	GRDA	MG	Dominantly unaltered granodiorite with patchy areas of weak propylitic alteration. Minor fracture zones present within.

						LT	GN		PRO	1I		
66.70	77.87	11.17	GRD	MG	Interval of weakly to moderately propylitic and phyllic altered granodiorite with intermittent interals of moderate to strong argillic alteration sporadically throughout. Altered granodiorite zone has dissemianted pyrite largely throughout entire interval, except where argillic alteration zones occur (combined with ligt green colouration with lack of strong chlorite suggests phyllic alteration). Argillic altered granodiorite has highly fractured and rubbly sections, which appear associated to the emplacement of fine grained, pink aplite dykes. Local patches of unaltered granodiorite occur, but are rare within. Pyrite is found as disseminations throughout phyllic/propylitic alteration zones and as fracture infill.

14.25	14.40	VT	37	70	NUL	3	oxidized and weathered quartz carbonate stringers cutting orange weathering, argillic to propylitic altered granodiorite. Veins host orange and brown weathered limonite, which likely represents weathered sulphides.			
38.23	38.34	VN	37	-	NUL	1	rubbly and fractured quartz-smokey quartz vein with weathered limonite and goethite. No visible minerals (weathering). Hosted within argililc/propylitic altered granodiorite with weathering.			
								Go	1	DI
								Li	1	DI
40.46	40.48	VN	37	60	NUL	1	2cm carbonate vein			
61.20	61.62	DY	37	65	NUL	1	light brown to slightly green, fine grained apligte dyke cutting weakly propylitic altered granodiorite. Sharp contacts with no halo on selvedges (within broad alteration halo)			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
61.36	61.41	DY	37	65	NUL	1	medium pink coloured aplite dyke cutting argillic altered granodiorite with weak propylitic overprinting. Sharp contacts with no halo on selvedges (within broad alteration halo)			
63.28	63.33	DY	37	70	NUL	1	medium pink aplite dyke cutting argillic altered granodiorite. Sharp contacts with no halo on selvedges (within broad alteration halo).			
67.66	67.70	DY	37	65	NUL	1	medium pink aplite dyke cutting argillic altered granodiorite.			
70.13	70.18	VN	37	70	NUL	1	Quartz carbonte vein hosting disseminated pyrite intermixed with medium pink/brown, fine grained dyke.			
								Py	4	DI
71.43	71.58	DY	37	30	NUL	1	medium pink to brown, fine grained dyke cutting propylitic to minor argillic altered granodiorite. Sharp contacts.			
72.83	72.85	VN	37	25	NUL	1	microshearing within propylitic altered granodiorite. Shear zone hosts unknown grey/black mineral as irregular disseminated masses.			
								Un	3	DI
83.85	84.00	VN	37	25	NUL	2	two 3-4cm quartz veins (barren) cutting argillic altered granodiorite.			
91.66	92.40	DY	37	-	NUL	3	highly fractured interval of weakly propylitic altered granodiorite found alongside fault zone (located below interval). Fractured zone carries numerous medium brown, fine grained dykes that average 4cm in width. One smokey quartz veinlet (2cm) present that hosts disseminated pyrite.			
								Py	1	DI
92.71	92.87	FT	42	75	NUL	2	Rubbly fault zone (8cm) with medium brown, fine grained dyke found along footwall and quartz-sulphide vein found in hanging wall. Disseminated pyrite is found in fault gouge and rubble. Vein hosts pyrite +- arsenopyrite.			
								As	0.5	DI
								Py	2	DI
96.50	96.70	DY	37	80	NUL	1	medium brown, fine grained dyke.			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
98.24	98.50	DY	37	40	NUL	1	25 cm medium pink, fine grained aplite dyke cutting trace propylitic and potassic altered GRD. Trace chlorite grains found within dyke.			
99.80	100.00	VT	37	65	NUL	3	black stringers of smokey quartz and carbonate (mm scale) cutting propylitic/potassic altered granodiorite. Three stringer zones present that terminate at the end of interval, where a 1cm dyke is present at 75 tca.			
104.36	104.37	VT	37	55	NUL	1	quartz-smokey quartz-ankerite veinlet cutting propylitic altered granodiorite. Veinlet hosts disseminated pyrite.			
								Py	3	DI
105.89	105.91	VT	37	60	NUL	1	quartz-smokey quartz-ankerite veinlet cutting propylitic altered granodiorite. Veinlet hosts disseminated pyrite.			
								Py	3	DI
107.00	107.03	VT	37	78	NUL	1	banded carbonate-rhodochrosite veinlet cutting propylitic altered granodiorite. White carbonate forms the centre of the vein, with rhodochrosite along the outer edges, and fine carbonate stringers along the outside of the vein proper.			
110.99	111.04	VN	37	60	NUL	1	quartz-smokey quartz-carbonate vein hosting disseminated pyrite. Minor hematite throughout.			
								He	1	BL
								Py	2	DI
112.03	112.18	FT	42	-	NUL	1	smokey quartz vein found along the footwall of fault zone that cuts weakly propylitic altered granodiorite. Vein has ankerite, disseminated pyrite throughout.			
								Py	5	DI
132.62	133.46	FT	42	75	NUL	1	zone of faults crossing propylitic altered granodiorite. Faults are identified by thin gouged and rubby fracture zones, which have smokey quartz and pyrite disseminated along contacts. 5 fault structures present in interval (1-4cm wide).			
138.12	138.13	ST		67	NUL	1	quartz-carbonate (ankerite) stringer hosting dissemianted pyrite and blackjack sphalerite. Hosted within phyllic/propylitic altered granodiorite.			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
								Py	2	DI
								Sp	4	DI
142.39	142.46	VN	37	80	NUL	2	4cm quartz carbonate vein hosted within weakly propylitic altered granodiorite. Vein is found along the footwall contact of a 5cm, green to pink, aplite dyke. Vein comprises a mix of white and smokey quartz, with a vuggy carbonate centre line. Disseminated pyrite (cubic, but slightly silver coloured) is found throughout.			
								Py	7	DI
144.87	145.03	VN	37	65	NUL	1	Quartz breccia vein zone hosted along the footwall of a small 5cm rubbly fault zone. Siliceous breccia zone hosts sporadic blebs of galena, pyrite, and black to honey brown to red sphalerite.			
								Gn	4	BL
								Sp	1	BL
								Py	2	BL

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
5.35	5.42	VN	37	70	NUL	2	two small 1 cm wide quartz veins with dissemianted blebbly pyrite dispersed thorughout them. Host rock is oxidized granodiorite.			
								Py	2	DI
								Py	1	BA
12.14	17.45	DY	37	70	NUL	1	finegrained quartz feldspar porphyritic dyke with fine-grained chill margins on upper and lower contact			
27.80	27.86	DY	37	30	NUL	1	small brownish pink fine gained aplite dyke			
28.90	29.20	ST		80	NUL	2	two small pyrite bearing quartz veins 0.5cm wide, In propylitic altered granodiorite			
								Py	0.5	DI
32.83	33.10	ST		70	NUL	3	small quartz carbonate veinlets with fine-grained disseminated pyrite on their margins. Wallrock is altered Propylitic granodiorite with weak sericite alteration			
								Py	0.5	DI
34.63	34.87	VN	37	75	NUL	1	fine grained sooty grey to white siliceous quartz vein filled with pyrite (specifically a pyrite filled fracture from 34.70-34.73 trending 70 ACTA). Disseminated pyrite and sericite alteration extends around this siliceous pyrite filled vein, to the extent of this measurement.			
								Py	2	DI
								Py	2	BA
37.47	37.74	DY	37	40	NUL	1	fine grained pinkish brown dyke with patchy blebs of almost agglomerated patchy snowflake texture (rare)			
40.90	40.95	FT	42	15	NUL	1	oxidized fracture, folowing this fractures is a altered fault zone with rubbly clay altered grnaodiorite until 42.5m			
44.80	45.05	ST		80	NUL	3	set of 3 stringer quartz carbonate veinlets that are pyrite filled, with weak propylitic alteration haloes that are 2cm wide			
								Py	0.5	DI

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
46.77	47.12	ST		70	NUL	4	set of 4 stringer quartz carbonate veinlets that are pyrite filled, with weak propylitic alteration haloes that are 4 cm wide			
								Py	0.5	DI
47.75	48.30	FT	42	60	NUL	1	large, rubbly , fractured fault zone directly above a high grade vein zone			
48.30	48.75	VN	37	70	NUL	1	quartz vein, heavily silicified with disseminated patchy pyrite and a small interval (~3cm) with sphalerite. Entire interval consists of silicified quartz vein with disseminated pyrite and sphalerite. Weak sericite alteration on fractures surfaces and minor oxidation throughout.			
								Py	2	DI
								Sp	2	DI
49.24	49.30	FT	42	70	NUL	1	one small 4 cm wide clay gouged competent fault in granodiorite			
49.36	49.85	ST		70	NUL	7	small stringer zone consisting of quartz carbonate veinlets with disseminated pyrite associated with them. Each veinlet is 3-6 mm wide. Interval is propylitically alterered - moderate.			
								Py	0.5	DI
53.59	53.61	VT	37	70	NUL	1	one small 2 mm wide quartz carbonate veinlet with a weak 1 cm propylitic alteration halo, some hematite staining throughout			
								Py	0.5	DI
54.46	54.48	VT	37	70	NUL	1	one small 2 mm wide quartz carbonate veinlet with a weak 3 cm propylitic alteration halo			
								Py	0.5	DI
55.54	55.57	VT	37	80	NUL	1	one small 2 mm wide quartz carbonate veinlet with a weak 1 cm propylitic alteration halo			
								Py	0.5	DI
56.27	56.29	VT	37	70	NUL	1	one small 1 cm wide quartz carbonate veinlet with one mm wide thin black red seam (hematite?) trace idsseminated pyrite			
								Py	0.3	DI
57.20	57.36	VT	37	80	NUL	2	Two 1 cm wide quartz carbonate veinlets with propylitic alteration halo extending 3 cm on either side

56.00	56.80	0.80	GRD	GRDM	MG	medium grained moderately propylitic altered granodiorite with weak mm-scale pyrite bearing quartz veins developed along fracture surfaces and disseminated throughout interval..
56.80	59.50	2.70	GRD	GRDA	MG	medium grained, salt and pepper textured granodiorite, relatively unaltered. Trace propylitic alteration
59.50	62.00	2.50	GRD	GRDM	MG	medium grained moderately propylitic altered granodiorite with weak mm-scale pyrite bearing quartz veins developed along fracture surfaces and disseminated throughout interval.
62.00	62.67	0.67	GRD	GRDA	MG	medium grained medium grey to green weakly propylitic altered granodiorite.
62.67	63.50	0.83	GRD	GRDM	MG	medium to fine grained, silicified and moderateely propylitic altered granodiorite with disseminated pyrite throughout interval, coincidign with zones of more intense propylitic alteration.
63.50	63.65	0.15	VEN	VEIN	MG	medium grained quartz vein with semimassive pyrite, arsenopyrite, galena, and sphalerite. Trace chalcopyrite on fracture surfaces.
63.65	65.09	1.44	GRD	GRDM	MG	medium grained greenish grey strongly propylitic altered granodiorite with disseminated pyrite throughout entire interval. Weak sub-mm hairline stringers sporadic throughout contain disseminated pyrite.
65.09	65.25	0.16	VEN	VEIN	MG	quartz carbonate vein trending 40 ATCA with dissemainted pyrite, trace arsenopyrite, trace galena, and one small 5 mm wide band of sphalerite.
65.25	65.52	0.27	GRD	GRDM	MG	medium grained greenish grey strongly propylitic altered granodiorite with disseminated pyrite throughout entire interval. Weak sub-mm hairline stringers sporadic throughout contain disseminated pyrite.
65.52	65.57	0.05	VEN	VEIN	MG	quartz vein containing disseminated pyrite, trace galena and sphalerite.
65.57	66.46	0.89	GRD	GRDM	MG	medium grained greenish grey moderately propylitic altered granodiorite with disseminated pyrite throughout entire interval. Weak sub-mm hairline stringers sporadic throughout contain disseminated pyrite.
66.46	66.54	0.08	VEN	VEIN	MG	quartz vein with dissemianted blebby sphalerite, galena, carbonate, and quartz. Trace pyrite.
66.54	67.57	1.03	GRD	GRDA	MG	meidium grained white to greenish grey moderate argillic altered grd with a weak propylitic overprint.
67.57	68.15	0.58	GRD	GRDM	MG	medium grained greenish grey moderately propylitic altered granodiorite with disseminated pyrite throughout entire interval. Weak sub-mm hairline stringers sporadic throughout contain disseminated pyrite.
68.15	72.75	4.60	GRD	GRDA	MG	medium grained light white to greenish grey moderately argillic altered granodiorite with a weak to moderate propylitic overprint. Weak hairline carbonate stringers throughout interval are barren of sulphide
72.75	74.90	2.15	GRD	GRDA	MG	mediumg grained medium grey with patchy green weakly propylitic altered granodiorite
74.90	75.08	0.18	APL	DYK	FG	finegrained brownish grey aplite dyke trending 070 ATCA

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
75.08	77.60	2.52	GRD	GRDA	MG	medium grained light green to white moderately argillic altered granodiorite with a moderate propylitic overprint. Weak low angle (30-40 ATCA) 3-5 mm wide quartz carbonate veinlets are developed throghout interval, that have weak tourmaline alteration haloes that extend 3 mm oneither side.
77.60	78.70	1.10	GRD	GRDM	MG	strongly propylitic atered granodiorite with argillic alteration, and weak quartz carbonate stringers devleoped throughout, with weak disseminated pyrite throughout
78.70	79.69	0.99	GRD	GRDA	MG	moderate propylitic altered granodiorite overprinting weak argillic alteration.
79.69	79.86	0.17	GRD	GRDM	FG	zone of strong silicification and weak mineralization with many veinlets that trend 40 ATCA. Not a true quartzv ein, but a zone where there is a lot of intense silicification
79.86	81.80	1.94	GRD	GRDM	MG	medium grained, medium green to greenish grey moderate propylitic altered granodiorite with trace dissminated pyrite in hairline sub-mm stringer veinlets dispersed throughout intervals and along fracture surfaces
81.80	83.67	1.87	GRD	GRDA	MG	meidumgrained, weakly propylitic altered granodiorite with no visible sulphides.
83.67	83.72	0.05	APL	DYK	FG	fine grained dark greyish aplite dyke; fine-grained
83.72	87.25	3.53	GRD	GRDA	MG	medium grained medium grey, patchy green patchy trace propylitically altered granodiorite. Propylitic alteration is related to hairline quartz carbonate fractures which contain trace to no visible pyrite.
87.25	88.50	1.25	GRD	GRDM	MG	medium grained medium grey to greenish grey granodiorite with moderate propylitic alteration, containing five 1 cm wide quartz carbonate veinlets that host disseminated pyrite.
88.50	90.50	2.00	GRD	GRDA	MG	medium grained medium grey to greenish grey granodiorite with weak propylitic alteration, patchy.
90.50	91.15	0.65	GRD	GRDM	MG	medium grained medium grey to greenish grey granodiorite with moderate propylitic alteration, containing three 1 cm wide quartz carbonate veinlets that host disseminated pyrite.
91.15	92.00	0.85	GRD	GRDA	MG	medium grained trace prpoylitic altered granodiorite
92.00	92.93	0.93	GRD	GRDM	MG	Medium to finegrained strongly propylitic altered granodiorite with trace disseminated pyrite throughout interval, hosted in sub-mm hairline pyrite stringers that trend 70 ATCA
92.93	92.99	0.06	VEN	VEIN	MG	breciated siliceous quartz carbonate vein with trace disseminated pyrite. Vein is medium grey and white, with a sort of banded texture to it, with minor disseminated tourmaline above and below
92.99	94.90	1.91	GRD	GRDF	MG	medium grained, light white to light grey, oxidized, rubbly granodiorite. Likely related to faulting, this granodiorite has a lot of sporadic clay alteration on fractures. Weak argillic alteration overprinted by weak propylitic alteration
94.90	95.75	0.85	GRD	GRDA	MG	medium grained medium grey to greenish grey granodiorite with weak propylitic alteration

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
95.75	96.50	0.75	GRD	GRDM	MG	medium grained medium grey to greenish grey granodiorite with moderate propylitic alteration, containing one 1 cm wide quartz carbonate veinlets that host disseminated pyrite.
96.50	97.85	1.35	GRD	GRDA	MG	medium grained buff white to medium grey, reddish brown argillic altered granodiorite with a weak propylitic overprint
97.85	98.10	0.25	GRD	GRDM	MG	two 3 cm wide quarz veins 50 ATCA that are barren of sulphides. Wea 1 mm tourmaline ateration envelopes on vein margin
98.10	98.50	0.40	GRD	GRDM	MG	moderately altered propylitic granodiorite with weak disseminated tourmaline
98.50	99.00	0.50	GRD	GRDM	MG	one 4 cm wide quartz vein barren of sulphide and one 2 cm wide brecciated quartz vein with trace sphalerite in this interval. Granodiorite is moderately propylitic altered granodiorite
99.00	100.40	1.40	GRD	GRDM	MG	rubbly fractured granodiorite with weak oxidation on fracture surfaces.
100.40	102.43	2.03	GRD	GRDM	MG	faulted clay gougy granodiorite, possibly related to faulting, patchy blebby tourmaline alteration and clay alteration pervasive here, likely related to fluid flow due to faulting.
102.43	102.63	0.20	CLY	GRDM	MG	faulted clay horizon in altered mineralized granodiorite, trending 30 ATCA
102.63	103.40	0.77	GRD	GRDM	MG	moderately altered propylitic granodiorite with weak disseminated tourmaline
103.40	104.74	1.34	GRD	GRDA	MG	medium grained medium grey to greenish grey moderately argillic altered granodiorite with a weak propylitic overprint
104.74	104.94	0.20	GRD	GRDF	MG	medium grained tan brown to white faulted rubbly granodiorite, trending 70 ATCA, likely related to faulting.
104.94	106.36	1.42	GRD	GRDM	MG	moderately altered propylitic granodiorite with weak disseminated pyrite hosted in strginer veinlets and disseminated within groundmass

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
0.00	1.40	1.40	OVB	OVB	--	ovb
1.40	11.22	9.82	GRD	GRD	MG	Granodiorite interval with trace propylitic potassic (chlorite and K-spar oberved in grd interval) and local zones of weak argilic alteration. Interval is ractured and contains reddish/brownish clay oxidation along fracture and joint surfaces. Highly fractured rubbly zone is observed @ 8.15-8.60m (zone of local argillic alteration).
11.22	13.90	2.68	GRD	GRD	MG	Weak argillic and pervasively oxidized granodiorite interval. Pervasive oxidation within granodiorite clasts (oxidation of argillized clasts) and matrix is commonly occurring as well as reddish/brown clay oxidation along fractures and joint surfaces. Trace sub-mm pyrite occurs in granodiorite interval (only within grd not vein hosted pyrite observed).
13.90	15.24	1.34	FLR	FLT	FG	Clay rich, pervasively oxidized, brecciated fault zone. Interval is highly fractured and small segments of altered granodiorite can be observed within fault zone. Upper portion of fault zone exhibits darker red and orange oxidation while lower section displays light brown/yellow oxidation.
15.24	16.76	1.52	GRD	GRD	MG	Locally fractured, weakly propylitic granodiorite interval with minor oxidation in GRD host (oxidation mostly occuring along fracture/joint surfaces as yellow/brownish clay). Trace oxidized calcite veinlets sporadically occur throughout interval.
16.76	17.45	0.69	GRD	GRD	MG	rubbly, fractured interval of weeakly oxidized granodiorite. In this section oxidation is not limited to joint and fracture surfaces but appears to weakly oxidized grd host rock.
17.45	18.29	0.84	GRD	GRD	MG	Locally fractured, weakly propylitic granodiorite interval with minor oxidation in GRD host (oxidation mostly occuring along fracture/joint surfaces as yellow/brownish clay). Trace oxidized calcite veinlets sporadically occur throughout interval.
18.29	19.20	0.91	GRD	GRDA	MG	fractured, rubbly, pervasively oxidized, weakly propylitic granodiorite interval exhibiting brecciation along gougy seams (fault related (?)). Brecciated gougy seams are ~ 15 degrees TCA.
19.20	20.31	1.11	GRD	GRDA	MG	pervasively oxidized granodiorite interval with brecciated, gougy zones. Unit is more competent than previous interval. (fault brecciation(?))
20.31	22.00	1.69	GRD	GRDA	MG	Trace propylitic, intermittent trace to weak argillic, weakly to moderately oxidized,granodiorite.
22.00	23.44	1.44	GRD	GRDA	MG	weakly argillic, pervasively oxidized granodiorite interval. Oxidation in interval is red compared to previous oxidized zones (more hematite oxidation than clay). Trace 1-2 mm, oxidized veinlets are locally observed @ 23.20m
23.44	24.38	0.94	GRD	GRDA	MG	weakly argillic, oxidized granodiorite interval. Interval contains oxidized, stringer veins containing fine grained disseminated pyrite. (oxidation similar to previous interval but exhibits increased pyrite bearing veinning). Interval contains soft, gougy brecciated seam at 23.93m. Hematite bands are also observed in stringer vein zone.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
24.38	26.60	2.22	GRD	GRDF	MG	fractured, rubbly interval of pervasively oxidized grd . (fault related (?); no sign of brecciation or sheared just rubbly interval.
26.60	27.88	1.28	GRD	GRD	MG	Weakly argillic, moderately oxidized granodiorite interval. Oxidation is redder (hematite) and more pervasive than previous interval. Dark brown , rubbly zone occurs at 26.85-27m. Trace, pyrite bearing veinlets are locally observed as well.
27.88	28.96	1.08	GRD	GRD	MG	fractured, rubbly interval of oxidized, weakly argillic granodiorite.
28.96	29.40	0.44	GRD	GRD	MG	weakly oxidized, granodiorite interval. Interval is fractured, less oxidized and more competent than previous interval.
29.40	30.48	1.08	GRD	GRD	MG	fractured, in trace propylitic granodiorite. Granodiorite contains dark grey, fine grained magnetic inclusions (i.e. 29.80m). Granodiorite is less oxidized than previous interval.
30.48	34.90	4.42	GRD	GRD	MG	weakly potassic, trace propylitic , fractured granodiorite. Oxidation mostly occurs along fracture and joint surfaces. Some reddish hematite alteratin is also observed in fracture/joint surfaces.
34.90	36.58	1.68	GRD	FLT	MG	moderately oxidized, rubbly granodiorite interval (fault related (?). Small fragments of granodiorite can be identidied in rubbly (faulted (?)) zone. Granodiorite fragments appear to be weakly potassic and trace propylitic (K-spar and chlorite clasts can be identified).
36.58	37.20	0.62	GRD	GRDA	MG	Oxidized, fractured and rubbly interval of weakly potassic, trace propylitic granodiorite
37.20	38.90	1.70	GRD	GRDA	MG	weakly to moderately potassic granodiorite exhibiting weak hematite alteration in grd and along fracture/joint surfaces. Interval is more comptetent than surrounding highly fractured/rubbly granodiorite zones.
38.90	39.62	0.72	GRD	GRDA	MG	weakly to moderately potassic , highly fractured granodiorite interval with weak hematite oxidation on surface and along joint/fracture surfaces. Interval is less competent than last.
39.62	41.10	1.48	FLT	FLT	--	oxidized, gougy clay rich, rubbly faulted interval. small fragments of granodiorite are identified. (faulted (?)).
41.10	44.20	3.10	GRD	GRD	MG	weakly potassic, trace argillic,fractured, oxidized granodiorite interval. Oxidation appears dark red (hematite(?) along fractures, joint surfaces and on host rock surface. Trace 2-6 mm quartz veins are locally observed throughout interval.
44.20	46.55	2.35	GRD	GRD	MG	Granodiorite interval exhibiting weak phyllic alteration and trae potassic alteration. Oxidation is light brown on surface (less hematite than previous interval). Shear brecciated gouges are observed near the grf fault contact (i.e. 46.40m). Trace, fine grained disseminated pyrite is observed within interval.
46.55	47.31	0.76	GRD	FLT	MG	gouged, brecciated , granodiorite interval (fault brecciated). Gouged seams are lighter colored than rest of faulted interval
47.31	48.77	1.46	FLR	FLT	MG	rubbly, fractured, gouged, fault brecciated interval of faulted grd.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
48.77	50.29	1.52	GRD	FLTM	MG	interval composed of moderately oxidizied , rubbly, gouged and brecciated granodiorite fault footwall interval. clay rich gougy seams are observed proximal to mineralized vein.
50.29	50.45	0.16	MX	FLTM	FG	clay rich, gouged vein section in fault foot wall. Interior of vein is light to dark grey and contains fine grained disseminated pyrite.
50.45	50.95	0.50	MX	FLTM	FG	Rubbly, oxidized mineralized fault footwall vein zone containing fine grained disseminated pyrite, cubic galena, fine grained arsenopyrite. Hematite vein replacement is locally observed in small discernable fragments.
50.95	53.20	2.25	GRD	GRDA	MG	weakly oxidized, weakly to moderately argillic granodiorite interval. Clay rich, oxidation is locally observed along fractures and joint surfaces. @ 52.8m, dark reddish, hematitic oxidation occurs within altered granodiorite interval.
53.20	54.00	0.80	GRD	GRDA	MG	gouged brecciated and rubbly interval of weakly to moderately oxidized granodiorite (fault related(?))
54.00	54.86	0.86	GRD	GRDA	MG	light grey, brecciated and gouged granodiorite intervalin faulted zone. Interval more competent and less oxidized than previous.
54.86	57.00	2.14	GRD	GRDA	MG	weakly oxidized, trace propylitic/argillic granodiorite containing small, gougy clay seams and pyrite,arsonepyrite bearing quartz veins (i.e. 53.30m). Disseminated pyrite and small arsonepyrite blebs are observed in low angle 15 degrees quartz vein that is crosscut by minor 1-2 mm milky quartz veinlets. Dark grey, fine grained (smoky quartz(?) also contain sub-mm blebby pyrite. @ 56.20m soft, fracture zones are ~ 45 degrees TCA.
57.00	59.03	2.03	GRD	GRDA	MG	Moderately oxidized granodiorite exhibiting trace propylitic and weak alteration. Gouge brecciation zone occurs @ 57.60m (shear/fault related(?)) . Interval also displays reddish hematitic oxidation locally within gouge brecciated zone. From 57.90-59.04 interval is more fractured.
59.03	60.60	1.57	GRD	GRDA	MG	Moderately oxidized, gouge brecciated, locally rubbly, granodiorite interval (fault brecciated (?)). Increased fault brecciation is observed proximal to grd-quartz feldspar porphyry dyke contact. Trace 1-2 mm unmineralized quartz veinlets are sporadically observed in interval. Hematite clasts are identified in interval as well as trace chlorite clasts (trace propylitic alteration).
60.60	61.47	0.87	GRD	GRDA	MG	moderately oxidized, weakly argillic and trace propylitic granodiorite interval. Grd is more competent than previous interval and displays gougy brecciation at the contact with quartz feldspar porphyry dyke intrusion (i.e. 61.47m). Trace 1-2 mm unmineralized quartz veinlets are locally observed throughout interval.
61.47	61.94	0.47	QFP	DYK	FG	fractured, moderately oxidized quartz feldspar porphyry dyke interval. Fractured and oxidized proximal to contact
61.94	62.53	0.59	QFP	DYK	FG	competent interval unaltered quartz feldspar porphyry dyke with some oxidation along fracture/joint surfaces.
62.53	62.94	0.41	QFP	DYK	FG	Rubbly, weakly oxidized interval of quartz feldspar porphyry dyke.
62.94	63.80	0.86	QFP	DYK	FG	competent interval of quartz feldspar porphyry dyke. Trace oxidation along fractures and joint surfaces is locally observed.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
63.80	64.01	0.21	QFP	DYK	FG	oxdizied, gouged, brecciated quartz feldspar porphyry dyke interval. oxidation and brecciation occur near quartz feldspar porphyry dyke and grd unit.
64.01	64.67	0.66	GRD	GRDA	MG	weakly propylitic, trace argillic granodiorite interval with locally oxidation zones. Near brecciated contact with quartz feldspar porphyry dyke, a 3 cm pyrite bearing vein is observed containing fine disseminated pyrite and euheral pyrite crystals developed in fractured surfaces. Quartz vein contains sub-mm, dark, fine grained inclusions (smoky quartz (?). Clay oxidation is commonly observed along fracture and joint surfaces.
64.67	65.47	0.80	GRD	GRDA	FG	oxidized, rubbly zone of weakly propylitic granodiorite.
65.47	66.35	0.88	GRD	GRDA	MG	trace propyitic , locally oxidized granodiorite interval containting dark, fine grained magnetite, mafic inclusions.
66.35	67.20	0.85	GRD	GRDA	FG	rubbly zone of granodiorite. Interval displays dark ressish hematitic oxidation compared to previous rubbly zone.
67.20	71.60	4.40	GRD	GRDA	MG	granodiorite interval exhiiting trace propylitic alteration. Overall, interval is relatively unaltered with minor zones of trace propylitic alteration, competent and contains 1-2 mm, pyrite bearing, dark fine grained smoky quartz veinlets. Pyrite is also observed to interstitially surround dark, fine grained veinlets. (i.e. 67.74). Trace hematitic venlets and hematitic oxidation is locally observed in interval with clay-oxidation and reddish hematitic oxidation being more prominent along fracture and joint surfaces.
71.60	73.93	2.33	GRD	GRDA	MG	granodiorite interval with intermittent zones of moderate argillic alteration. Unaltered interval of grd contains trace chlorite clasts (trace propylitic overprint(?)). Dark red, oxidation is observed in argillic altered grd sections. Grd interval contains dark, fine grained, magnetic inclusions and appears to be more oxidized in argillic altered zones. Trace 2-4 mm unmineralized quartz veins are locally observed in altered zones. Clay oxidation along fracture/joint surfaces is commonly occuring throughout interval.
73.93	77.80	3.87	GRD	GRDA	MG	granodiorite interval with intermittent zones of weak argillic alteration. Interval is more fractured and exhibits less alteraiton than previous unit. Trace chlorite clasts are observed in relatively unaltered grd sections (trace propylitic component(?)). Minor 1-2 mm, dark, fine grained, unmineralized veinlets are locally observed in unaltered grd sections. Clay oxidation is observed along fractures and joint surfaces.
77.80	79.14	1.34	GRD	GRDA	MG	moderate propylitic, trace phylic-propylitic granodiorite interval exhibiting gouge brecciation zones. Fine grained disseminated pyrite is locally observed within altered grd interval (increased local quartz content may be trace phyllic(?)). Trace 1-2 mm quartz veins occur in interval. Oxidation along gouged, brecciated seam is locally observed as well.
79.14	79.84	0.70	GRD	GRDA	MG	rubbly zone of weakly to moderate argillic granodiorite. Disseminated pyrite observed in light grey sections of unoxidized grd.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
79.84	80.20	0.36	VEN	VEIN	MG	Trace propylitic granodiorite interval with intermittent, alternating zones of moderate argillic-propylitic zones and trace phyllic alteration near vein zones (i.e. 80-80.40m). Quartz/ ankerite vein zones containing semi massive, interstitial pyrite and trace arseno pyrite are locally observed in sections of trace phyllic, propylitic altered grd ;(near vein zones, grd exhibits increased quartz clasts, basal cleavage muscovite , disseminated pyrite in host rock (trace phyllic alteration)). Chlorite clasts are more abundant near pyrite bearing zones. Pyrite in quartz vein appear to interstitially infill vein. Ankerite vein is observed parallel to pyrite -bearing quartz vein. Light pink, rhodochrosite veins surrounding quartz vein appear to partially brecciate quartz vein and surrounding host rock. Dark grey, smoky quarz veins running parallel to mineralized veins are also observed. Clay-oxidation is commonly observed along fracture/joint surfaces.
80.20	83.25	3.05	GRD	GRD	MG	Trace propylitic, potassic granodiorite (chlorite clasts and K-spar component observed) with intermittent zones of weak argillic and weak propylitic alteration (i.e. 80.20-80.45m, 81.75-81.90m) (zones are light green, contain more chlorite and swelling of feldsphathic clasts). Some reddish, hematitic oxidation is locally observed in lower portion of granodiorite and within fracture/joint surfaces. Trace, 3-5 mm unmineralized, quartz veins with vein restricted carbonitic infill occurs in interval @ 81.83m. @ 83-83.25, 1-m mm, dark, fine grained, magnetic veinlets containing trace fine grained pyrite are observed with hematite infilling some of these veins.
83.25	83.57	0.32	GRD	GRD	MG	fractured interval of trace propylitic/potassic granodiorite. Light brown/yellowish clay and dark red hematitic oxidation is commonly observed along fractures and joint surfaces.
83.57	86.54	2.97	GRD	GRD	MG	Trace potassic , propylitic altered granodiorite interval (chlorite clasts and K-sapr component in grd matrix observed). Interval is more competent than previous and displays trace 1-2 mm, calcite veinlets and 1-2 mm, dark, fine grained, magnetic veinlets.
86.54	87.56	1.02	GRD	GRD	MG	weakly oxidized, fractured interval of granodiorite exhibiting weak propylitic, weak argillic and trace potassic alteration (chlorite clasts and soft, swelled feldspathic clasts are more prominent in this interval with minor k-spar component in grd matrix). Yellow light brown clay oxidation and trace reddish hematitic alteration occur along fracture and joint surfaces.
87.56	89.44	1.88	GRD	GRD	MG	trace to weakly potassic , trace propylitic granodiorite interval. (trace chlorite clasts observed and increased K-spar matrixcomponent observed in grd interval. Trace sub-mm unmineralized quartz veins; sometimes containing hematite are observed in interval.
89.44	91.51	2.07	GRD	GRD	MG	Granodiorite similar to previous interval but with decreased potassic component and trace argillic alteration. Fractured zones occur @ 89.90-90.40m (chlorite can be observed along fracture surfaces (weak propylitic alteration (?)). Trace 1-2 mm carbonate veinlets are sporadically observed on interval. A 0.5 cm weak potassic halo surrounded a 1-2 mm quartz veinlet is observed @ 90.52m.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
91.51	95.75	4.24	GRD	GRD	MG	Interval is composed of highly fractured, rubbly, weakly potassic and argillic granodiorite. Chlorite and hematite are commonly observed along fracture and joint surfaces (hematite and chlorite slickenlines observed). Fractured interval might be fault related (?).
95.75	96.35	0.60	GRD	GRDA	MG	weakly potassic, propylitic, moderate argillic granodiorite interval. soft, clay gouge seams and brecciation are observed near pyrite bearing vein zone (i.e 96.25m). Veins contains disseminated pyrite in dark, fine grained veins and within around host grd.
96.35	96.64	0.29	GRD	GRDA	MG	Fractured, rubbly interval of weaklty to moderate argillic, trace propylitic (chlorite clasts locally observed in competent grd fragments and in some frature/joint surface) granodiorite. Light brown and reddish oxidation also occurs in rubbly grd interval. Rubbly, altered granodiorite fragments contain fine grained disseminated, and 1-2 mm, cubic, euheral pyrite.
96.64	97.54	0.90	GRD	GRDA	MG	Granodiorite interval exhibiting weak argillic, weak potassic and trace propylitic alteration (swelling of faldspathic clasts observed, increased, K-spar component in grd matrix and trace chloritized clasts observed. Weak oxidation is observed along fracture surfaces. Trace 1-2 mm, dark, fine grained, magnetic veinlets containint carbonitic infill are observed @ 97.30m.
97.54	100.58	3.04	GRD	GRDA	MG	Relatively unaltered granodiorite interval with trace propylitic and potassic alteration (trace chlorite clasts and k-spar matrix component in grd). Trace 1-2 mm, unmineralized quartz veinlets are observed sometimes with carbonitic infill within them (i.e. 98.97-99m). Orange/brownish clay oxidation, reddish oxidation and chlorite coating on fracture and joint surfaces are locally observed.
100.58	101.00	0.42	GRD	GRDA	MG	granodiorite interval exhibiting weak potassic and argillic alteration.
101.00	101.64	0.64	GRD	GRDA	MG	weakly argillic, propylitic and trace potassic altered granodiorite interval. interval is soft and fratured and contains 1-cm pyrite bearing quartz/carbonitic veins in locally less potassic, more argillic, propylitic granodiorite section. Disseminated pyrite and blebby pyrite is observed within vein. Ankerite vein running parallel to sub-mm, dark, fine grained, pyrite bearing inclusions is observed, sometimes microbrecciating host grd. Orange clay oxidation occurs in lower portion of interval near rubbly fault zone (?).
101.64	102.28	0.64	FLT	FLT	--	pervasively oxidized, rubbly, faulted zone. Gouge brecciation occurs in rubbly interval and orage-clay and reddish hematitic oxidation are locally observed
102.28	103.63	1.35	GRD	GRDA	MG	relatively unaltered granodiodirte interval with intermittent local zones of weak propylitic and potassic alteration. Trace fine grained pyrite is someties observed in less altered interval zones.
103.63	104.90	1.27	GRD	GRDA	MG	Weakly argillic , propylitic, trace potassic altered granodiorite interval. a 1 cm milky quartz vein rimmed by sub-mm, fine grained, pyrite bearing-smoky veinlets are observed @ 104.05m. Milky quartz veins contains 1-2 mm, clear quartz clasts intruded in vein. (or milky quartz vein replacement of clear quartz (?)).

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
104.90	107.15	2.25	GRD	GRDA	MG	unaltered section of granodiorite with local intermittent sections of weakly argillic, propylitic and trace potassic altered granodiorite.
107.15	107.78	0.63	GRD	GRDA	MG	granodiorite interval exhibiting weak to moderate propylitic alteration and argillic alteration. (more chlorite clasts observed, fine grained disseminated pyrite in grd, increased clay and feldspathic clast swelling). 1-3 mm milky quartz and dark, fine grained, pyrite bearing smoky quartz bands are locally observed in propylitic altered granodiorite.
107.78	111.00	3.22	GRD	GRDA	MG	granodiorite interval with alternating zones of weak to moderate argillic, potassic and trace propylitic alteration. Trace 1-2 mm quartz veinlets are prominently observed in more propylitic altered sections.
111.00	113.00	2.00	GRD	GRDA	MG	Fractured interval of alternating unaltered and weakly argillic/potassic and propylitic altered granodiorite.
113.00	114.00	1.00	GRD	GRDA	MG	fractured interval of weaklly argillic, potassic and trace propylitic (?) (trace chlorite clasts on grd and in fracture surfaces) granodiorite.
114.00	114.67	0.67	GRD	GRDA	MG	Granodiorite interval exhibiting moderate to strong propylitic alteration overprinting trace potassic alteration. Chlorite clasts are more abundant, epidote locally observed as well. Interval contains a 4-5 mm, low angle (10 degrees TCA) mineralized quartz vein, with carbonitic infill, that is crosscut but smaller 1-2 mm, milky quartz veinlets. Blebby pyrite and honey brown sphalerite are observed in mineralized vein.
114.67	115.25	0.58	GRD	GRDA	MG	weakly argillig and potassic granodiorite interval. no mineralization observed in interval. Carbonitic infill along fracture surfaces is locally observed.
115.25	115.72	0.47	GRD	GRDA	MG	Moderately propylitic granodiorite interval containting 1- 3 mm calcite veins and trace 1-2 mm, quartz veinlets. Trace disseminated pyrite is sometimes observed in quartz veinlets. Calcite veinlets appear to crosscut and offset darker, fine grained, carbonitic veinlets. (i.e. 115.55m).
115.72	117.42	1.70	GRD	GRDA	MG	Granodiorite interval with alternating sections of weakly propylitic, weaklky argillic and trace potassic alteration (5-10 cm sections of alternating alteration types). Calcite appears to infill fracture surfaces. 1-2 mm calcite veinlets are also observed as well as 1-2mm, dark, fine grained veinlets. Lower portion of interval is fractured (i.e. 116.60-117.42).
117.42	118.22	0.80	GRD	GRDA	FG	Dark green, fine grained, moderately silicified, strongly propylitic section of granodiorite with intermittent zone of weakly potassic alteration. Trace disseminated pyrite is observed within host grd and in dark quartz veins. Hematite is observed within pyrite bearing veins and in sections of weakly potassic alteration. Calcite appears to infill hematitez vein, and fracture surfaces locally.
118.22	118.87	0.65	GRD	GRDA	MG	Fractured, gougy interval composed of dark green, strongly propylitic, silicified fragments and light green, pyrite bearing, weakly propylitic , brecciated fragments .
118.87	119.64	0.77	GRD	GRDA	MG	Weakly to moderate propylitic granodiorite with intermittent zones of weak potassic and argillic alteration.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
119.64	120.63	0.99	GRD	FLTA	MG	Brecciated, locally gouged, moderately argillic, trace proplitic granodiorite interval. Interval is less altered than lower interval section. Trace disseminated pyrite is observed within grd.
120.63	121.46	0.83	GRD	FLTA	MG	shear brecciated, gouged, rubbly interval of strongly argillic and trace potassic granodiorite (faulted grd hanging wall(?)). Disseminated pyrite occurs within interval. Increased, dark, fine grained bands parallel to shear plane are locally observed in unit. Trace quartz, inclusions are also observed in grd interval (no mineral association with quartz inclusions though) . Trace clay and hematitic oxidation occurs in fracture surfaces.
121.46	123.22	1.76	FLT	FLTA	FG	gouged, brecciated, moderately argillic, weakly propylitic and intermittent weakly potassic faulted grd interval. Interval is rubbly and contains fine grained disseminated pyrite. Remnant quartz veins are observed in discernable grd fragments within rubbly, faulted interval.
123.22	124.60	1.38	FLR	FLTA	MG	fractured, rubbly interval of moderately argillic granodiorite with intermittent zones of moderate propylitic alteration.Euhedral, pyrite crystals are observed along fracture surfaces in proylitic altered granodiorite. Blebby pyrite is also observed within fractured grd interval (not restricted to veining but observed within grd host rock).
124.60	125.93	1.33	FLR	FLTA	MG	fractured, gouge brecciated, granodiorite interval exhibiting moderate argillic, weakly potassic (increased K-spar in grd; grains are pinkish/orange (argillic alteration overprinting potassic(?)) and trace propylitic alteration. Propylitic alteration is not as prominent compared to previous interval (less propylitic and more potassic). Pyrite content appears to decrease in this interval (sporadically observed but not as much as pyrite in previous interval.
125.93	127.15	1.22	GRD	GRDA	MG	weakly potassic, trace propylitic granodiorite with intermittent zones of weak argillic alteration. Trace, pyrite is observed within sporadic, fine grained, veinlets. Weak reddish hematitic alteration is observed in host grd and along fracture, joint surfaces.
127.15	127.81	0.66	GRD	GRDA	MG	granodiorite interval exhibiting weak to moderate phyllic alteration overprinting trace argillic and propylitic alteration. Increased quartz clasts, silicification , basal cleavage muscovite clasts and disseminated pyrite are commonly observed in phyllic altered interval. 1-4 mm euhedral pyrite crystals are observed along fracture/joint surfaces (chlorite coating on pyrite bearing fractures/joint surfaces).
127.81	129.40	1.59	GRD	GRDA	MG	moderate argillic , weakly proplitic, trace potassic granodiorite interval with local fractured, gouge brecciated zones (i.e. 128.20m ~ 20 degrees TCA, gouge brecciation between competent granodiorite and argillic granodiorite (this interval). @ 128.20, dark, fine grained, magnetic veinlet containting trace disseminated pyrite is offser by gouge brecciated zone (shear brecciation(?)). 1-2 mm, calcite infill veinlets appear to crosscut thing , dark, fine grained veinlets.
129.40	129.86	0.46	GRD	GRDA	MG	weakly propylitic, potassic, relatively unaltered granodiorite interval containting sub-mm , dark, fine grained inclusions.
129.86	131.05	1.19	GRD	GRDA	MG	moderate argillic, phyllic granodiorite with intermittent zone of weakly potassic, propylitic alteration. Trace, dark, fine grained veinlets are observed in interval

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
131.05	131.64	0.59	GRD	GRDA	MG	rubbly interval of moderate argillic, weakly phyllic granodiorite . Disseminated pyrite is observed within rubbly zone and within quartz veins (fragments of veins since interval is rubbly).
131.64	133.63	1.99	GRD	GRDA	MG	Weakly to moderate phyllic granodiorite overprinting moderat argillic, weakly propylitic alteration. (disseminated pyrite observed within grd, increased quartz clasts, and some basal cleavage muscovite (?) are locally observed. Gouged, brecciation also occurs in interval (131.80, 133.45m). Blebby pyrite is also observed in 1-4 mm, quartz veins. Disseminated and euhedral pyrite within fracture/joint surfaces is also observed (some chlorite in fracture/joint surfaces as well).
133.63	134.11	0.48	GRD	GRDA	MG	Weakly to moderate argillic, weakly phyllic, trace propylitic granodiorite containting pyrite bearing, quartz stringer zone (7 veins observed through interval length). Stringer veins are composed of quartz, dark fine grained thin smoky quartz and tan, ankerite infilling veins. @ 133.90m, a calcite vein brecciates, crosscuts and offsets local pyrite bearing veins.
134.11	135.90	1.79	GRD	GRDA	MG	locally fractured, weakly propylitic granodiorite with local zone of moderate argillic, weakly potassic alteration.
135.90	139.14	3.24	GRD	GRDA	MG	trace propylitic, potassic granodiorite with intermittent zones of weak propylitic alteration.Trace, sub-mm, dark, pyrite bearing veinlets are locally observed in local zones of propylitic alteration.
139.14	139.84	0.70	GRD	GRDA	MG	trace phyllic, weakly argillic granodiorite interval containing pyrite bearing vuggy veins and 1-2 mm veins. Trace disseminated pyrite is observed in more phyllic altered zone. Vuggy quartz is infilled by calcite and pyrite is contained within, dark grey, fine grained veins in vuggy vein (i.e.139.40m).
139.84	140.16	0.32	GRD	GRDA	MG	trace propylitic, potassic (relatively unaltered) granodiorite interval
140.16	141.90	1.74	GRD	GRDA	MG	moderate potassic, trace argillic granodiorite interval containing, black, fine grained, strongly magnetic inclusions. (i.e 140.33m). Inclusions are light mustard yellow . Dark red, hematitic alteration is observed in interval.
141.90	143.05	1.15	GRD	GRDA	MG	Fractured, gouged, moderate potassic granodiorite interval exhibiting increased hematitic oxidation.
143.05	144.10	1.05	GRD	GRDA	MG	weakly phyllic (disseminated pyrite observed, increased quartz, some basal cleavage muscovite crystals observed), propylitic altered granodiorite overprinting weak argillic alteration. Light pink, fine grained aplite dyke intrusion is observed @ 143.45m (~ 20 degrees TCA). Blebby tourmaline crystals are observed proximal to aplite dyke intrusion. Blebby pyrite is observed within tourmaline bearing zone (pyrite appears to interstitially surround tourmaline (tourmaline related to dyke intrusion and pyrite mineralization occurs post tourmaline mineralization(?)).Some quartz veins appear to crosscut tourmaline crystals. Calcite appears to brecciate hematized, pyrite bearing quartz veins (late stage carbonitic fluids(?)). Blebby pyrite is also observed within hematitic infilled quartz veins.
144.10	146.70	2.60	GRD	GRDA	MG	weakly to moderate potassic, trace propylitic granodiorite interval containing 1-2 mm, hematite-pyrite bearing veinlets that that locally offset and crosscut by calcite infill fractures.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
146.70	149.97	3.27	GRD	GRD	MG	granodiorite interval with trace potassic, trace propylitic alteration. Black, fine grained, magnetic inclusions are locally observed in interval. Upper portion of interval appears slightly more potassic. Trace, 2-3 mm, calcite veinlets and calcite fracture infill is observed in interval. Dark red, hematitic oxidation along fractures/joints is commonly occuring in interval.
149.97	150.35	0.38	VEN	GRDA	MG	pyrite bearing, carbonitic/quartz vein zone in weakly propylitic, phyllic granodiorite. Blebby and disseminated pyrite is observed within dark grey, smoky quartz veins that are surrounded and sometimes brecciated by ankerite,milky quartz veins (ankerite and pinkish rhodochrosite (?) appears to infill milky quartz vein). Blebby and disseminated pyrite also occur within altered grd interval.
150.35	151.66	1.31	GRD	GRDA	MG	weakl potassic, trace propylitic granodiorite with intermittent zones of increased potassic, argillic alteration. Reddish hematite oxidation is observed in interval
151.66	154.13	2.47	GRD	GRDA	MG	Granodiorite exhibiting moderate potassic alteration overprinting, weakly argillic alteration. Dark red, hematite oxidation is observed on grd surface and along fractures/joints. Calcite infilling fracture surfaces is observed on interval.
154.13	155.84	1.71	GRD	GRDA	MG	moderate argillic, weakly propylitic granodiorite overprinting trace propylitic alteration. Small vein zone at 155 m is observed. (trace pyrite observed in vein zone, ankerite and calcite appear to brecciate vein). Trace, hematitic veinlets are also observed in interval. 1-3 mm, pyrite bearing stringer veins also occur in grd interval (2 veins containing disseminated pyrite)
155.84	156.45	0.61	GRD	GRDA	MG	moderately potassic, weakl argillic granodiorite interval.
156.45	157.71	1.26	GRD	GRDA	MG	trace otassic, propylitic granodiorite with local zones of weak argillic alteration. Interval is locally fractured and contains dark red, hematitic oxidation along fractures/joint surfaces.
157.71	158.50	0.79	GRD	GRDA	MG	moderate potassic, argillic granodiorite interval.
158.50	159.25	0.75	GRD	GRDA	MG	trace potassic, propylitic granodiorite interval
159.25	159.62	0.37	GRD	GRDA	MG	Moderate potassic,argillic granodiorite interval containting trace, 1 cm calcite vein.
159.62	162.00	2.38	GRD	GRD	MG	weakly potassic, trace propylitic, relatively unaltered granodiorite interval. Trace 1-3 mm quartz veinlets occur in interval
162.00	163.30	1.30	GRD	GRD	MG	weakly potassic trace propylitic granodiorite interval more fractured than previous interval.
163.30	167.46	4.16	GRD	GRD	MG	weakly potassic, trace propylitic granodiorite with intermittent zones of trace argillic alteration (fractured zones, exhibit feldspathic clasts swelling). @ 167.44m a hematite bearing, quartz vein with yellowish oxidation halo is observed. Interval appears slightly more propylitic than previous unit (chlorite observed in grd, and along fracture/joint surfaces).

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
167.46	168.30	0.84	GRD	GRDA	MG	Granodiorite exhibiting moderate potassic, argillic alteration overprinting trace propylitic alteration (Fedspathic clast swelling is notable as well as increased potassic content in grd interval). Sub-mm , black, fine grained veinlets are locally observed in interval. From 168.30 onwards, granodiorite contains a black, fine grained, polymictic inclusion.
168.30	168.97	0.67	VEN	GRDA	MG	weakly propylitic, argillic granodiorite overprinting trace potassic alteration. Interval is fractured near carbonitic/quartz vein breccia zone. Calcite and pinkish (rhodochrosite(?) brecciate host granodiorite and appear to partially replace existing quartz, brecciating quartz clasts as well (carbonitic fluid replacement of quartz vein brecciating sections of partially replaced vein(?)).Dark red hematitic oxidation is observed around vein breccia zone and within grd host rock. Trace, blebby pyrite and disseminated pyrite is observed within clear quartz vein zone and within dark, hematitic clasts/veinlets.
168.97	169.70	0.73	GRD	GRDA	MG	highly fractured, moderately argillic, weakly potassic granodiorite interval. Trace carbonitic fracture infill is observed
169.70	170.65	0.95	GRD	GRDA	MG	relatively unaltered grd with possibly trace propylitic alteration (some chlorite clasts observed).
170.65	171.83	1.18	GRD	GRDA	MG	moderately argillic, trace phyllic granodiorite with intermittent zones of argillc, weakly potassic alteration. Argillic phyllic granodiorite zones contain minor, pyrite bearing quartz veins. Quartz veins contains dark, fine grained, veins containin fine grained disseminated pyrite. Calcite infill of quartz veins is locally observed as well.
171.83	172.84	1.01	GRD	GRDA	MG	relatively unaltered granodiorite interval.
172.84	175.00	2.16	GRD	GRDA	MG	moderate arigllic, weakly propylitic granodiorite with intermitten intervals of moderate to strong potassic alteration. Propylitic altered zones contains trace, quartz, dark, fine grained veinlets and carbonitic infill. Trace pyrite is observed in small vein.
175.00	176.43	1.43	GRD	GRDA	MG	strongly potassic, moderate arigllic, trace propylitic granodiorite interval. Moderate argillic zones are soft, fractured.
176.43	177.10	0.67	GRD	FLTM	MG	gouged, brecciated interal of moderately argillic, propylitic interval containing fine grained disseminated pyrite.
177.10	178.33	1.23	MX	FLTM	FG	mineralized, fault brecciated zone containtint semi massive pyrite, trace galena, arsone pyrite and blackjack sphalerite. Carbonitic entrained clasts are locally observed within brecciated mineralized interval. Interval is light to dark grey (sericitized) and is locally rubbly as well. Semi massive pyrite occurs as disseminations, blebby pyrite and euhedral, cubis pyrite crystals obserfed along fracture surfaces in competent rock sections.
178.33	178.74	0.41	GRD	FLTM	MG	weakly propylitic, fault brecciated granodiorite interval containin fine grained disseminated pyrite (less pyrite than dark, semi massive pyrite interval

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
178.74	183.18	4.44	GRD	FLTA	MG	mineralized zone fault foot wall comprised of brecciated, locally gouged weakly propylitic, argillic granodiorite with intermittent zones of weakly potassic alteration. Fault brecciation ocurs at low angle in fault footwall (5 degrees TCA). Trace disseminated pyrite is locally observed within altered grd (not on potassic altered zones though). Blebby pyrite is also observed in thin, fine grained, veinlets. Calcite appears to partially infill and surround pyrite bearing veinlets
183.18	186.17	2.99	GRD	GRDA	MG	moderately argillic, weakly propylitic granodiorite with alternating zones of moderate potasicc alteration. Some gouge brecciationg can be seen from 184.40-185m. Trace 1-2 mm calcite veinlets are sporadically observed in interval.
186.17	186.65	0.48	GRD	GRDA	MG	rubbly, gouge brecciated zone of weakly argillic, phyllic, trace propylitic granodiorite. Disseminated pyrite within rubbly and competent grd zones is observed.
186.65	188.84	2.19	GRD	GRDA	MG	weakly argillic, phyllic, propylitic granodiorite with intermittent zones of weak potassic , moderate argillic alteration . Pyrite bearing , smoky quartz veins, offset, brecciated and interstitially surrounded by calcite and minor ankerite are locally observed in interval. Trace disseminated pyrite occurs in less potassic grd. Light grey, mfine grained, soft, poymicitic inclusions occur within weakly argillic, trace potassic zones.
188.84	190.35	1.51	GRD	GRDA	MG	shear brecciated interval of weakly propylitic, phyllic, argillic granodiorite. Trace pyrite is observed in phyllic altered section @ 190.60m (disseminated pyrite, increased quartz clasts and trace basal cleavage muscovite grains). Pyrite bearing quartz veins are also observed in phyllic altered section.
190.35	191.05	0.70	GRD	GRDA	MG	rubbly, breccited interval of weakly argillic, proplitic granodiorite. (fault related(?)). Minor , disseminated pyrite is observed in rubbly brecciated interval
191.05	193.55	2.50	GRD	GRD	MG	weakly to moderately propylitic, weakly argillic and phyllic altered granodiorite. Blebby pyrite is obsserved in 1-3 mm smoky quartz veins (some dark veins appear to be brecciated by carbonitic infill and milky quartz. Trace disseminated pyrite is also observed in grd interval. Minor brecciated gouge seams are also observed in interval.
193.55	194.10	0.55	GRD	VEIN	MG	weakly to moderate propylitic, trace argillic granodiorite containting 4mm-1 cm mineralized veins (2 veins at ~ 30 degrees TCA). Mineralized quartz veins contain blebby galena, disseminated arsenopyrite, blebby pyrite and honey brown sphalerite . Pyrite, arseno pyrite and sphalerite appear to interstitially surround blebby galena in vein. Clear quartz are also observed within mineralized veins. (Late stage mineral bearing fluids replace and brecciate exsisting clear quartz veins (?)). Trace 1-3 mm, pyite bearing veinlets occur in upper inteval section.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
194.10	195.30	1.20	GRD	VEIN	MG	weakly to moderate propylitic, trace argillic, rubbly, gouge brecciated granodiorite interval containint 1-3 mm, mineralized quatz veins. Disseminated pyrite is observed throughout grd interval , and is more abundant in dark grey, soft rubbly zones. Mineralized veins contain blebby arsone pyrite, galena, pyrite and trace sphalerite. Light pink rhodochrosite appears to infill and brecciated mineralized vein zones. Dark, grey pyrite bearing , soft sections are weakly to moderately sericitized (soft, glitter, fine grained disseminated pyrite).
195.30	196.60	1.30	GRD	GRD	MG	shear brecciated interval of weakly propylitic, potassic granodiorite. Trace pyrite is observed within 1-2 mm quartz veinlets (~40 degrees TCA). Veinlets sometimes contain reddish, hematitic oxidation. Clay -oxidation is observed along fracture/joint surfaces. Trace hematitic alteration also occurs in more potassic altered grd sections.
196.60	197.49	0.89	GRD	GRD	MG	rubbly, gouged, brecciated, moderate to strongly argillic, trace propylitic granodiorite. Pyrite blebs filling fracture surfaces in rubbly interval is observed. Disseminated pyrite also within discernable 1-2 mm quartz veins.
197.49	199.36	1.87	GRD	GRD	MG	moderately argillic granodiorite with intermitten zones of moderate potassic alteration. Pyrite bearing, dark veinlets (~40 degrees TCA) are locally observed throughout interval. Some gouged, brecciated zones are also observed on interval.
199.36	200.41	1.05	GRD	GRD	MG	gouged, brecciated, rubbly interval of moderate argillic, trace potasssic granodiorite. Dark grey, pyrite bearing bands are observed (i.e. 199.55m). Pyrite bleb also occur in 1-2 mm quartz veinlets.
200.41	202.10	1.69	GRD	GRD	MG	moderately argillic, trace propylitic and potassic granodiorite interval containting local gouged, brecciated zones. Trace pyrite is observed in 1-3 mm, dark fine grained veinlets.
202.10	204.23	2.13	GRD	GRD	MG	weakly argillic, potasic and trace propylitic granodiorite interval. Locally fracture zones are observed in interval. Trace pyrite is alo observed within altered grd
204.23	204.89	0.66	GRD	GRD	MG	weakly argillic, weakly to moderate propylitic granodiorite interval. a 1 cm, mineralized quartz vein is observed @ 204.34m , in more propylitic grd zone. Vein contains blebby pyrite, trace galena blebs, interstitial trace arseno pyrite and trace sphalerite blebs. Clear quartz clasts (or replaced vein fragments (?)) are observed in mineralized vein . Arsenopyrite is spatially related to pyrite and galena is locally observed near sphalerite blebs. Small, vein restricted, carbonitic infilled fractures intruding perpedicular to mineralized quartz vein are obserbed. Trace, pinkish rhodochrosite inclusions also occur in mineralized vein (appear to partially infill vein).
204.89	205.74	0.85	FEL	GRDF	MG	gouged, brecciated granodiorite exhibiting moderate argillic, trace potassic and propylitic alteration. Trace disseminated pyrite occurs within soft brecciated zones.
205.74	206.70	0.96	FEL	GRDF	MG	gouged, brecciated, rubbly faulted granodiorite interval exhibiting moderate argillic alteration. Trace disseminated pyrite is observed within rubbly grd fragments.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
206.70	209.10	2.40	GRD	GRDA	MG	weakly propylitic, phyllic granodiorite with intermitten zones of weak argillic, trace potassic alteration. Trace disseminated pyrite occurs within host grd and within 1-2 mm quartz veinlets. Blebby pyrite also occurs along fracutre surfaces. Light brown/ ocre , fine grained dyke intrusions in granodiorite occurs @ 207.30 and 208.45m (~60 degrees TCA)>
209.10	209.46	0.36	GRD	VEIN	MG	brecciated, mineralized vein zone in moderate propylitic, weakl argillic granodiorite. Blebby pyrite occurs within darker , smoeky quartz veins and within brecciated sections of grd. Trace galena is observed in ankerite infilled, vein sections.
209.46	210.49	1.03	GRD	GRDA	MG	weakly argillic, trace propylitic and phyllic granodiorite interval. Trace pyrite occurs within grd interval and is contained within trace, 1-2 mm dark, fine grained veinlets.
210.49	211.00	0.51	GRD	GRDA	MG	weakly argillic, potassic, propylitic granodiorite interval. Trace calcite infilling fracture surfaces is locally observed.
211.00	211.43	0.43	GRD	GRDA	MG	rubbly section of weakly argillic, propylitic granodiorite. Pyrite blebs occurs along fracture surfaces in rubbly fragments
211.43	212.26	0.83	GRD	GRDA	MG	weakly propylitic, argillic, granodiorite with intermittent zones of trace phyllic, weak potassic and increased propylitic alteration. Disseminated pyrite is observed in grd section of trace phyllic alteration. Sub-mm pyrite bearing veinlets are also observed in interval
212.26	213.10	0.84	GRD	GRDA	MG	gouged, brecciated, weakly argillic, propylitic and trace potassic granodiorite interval. Trace disseminated pyrite is observed within brecciated clasts.
213.10	213.64	0.54	GRD	VEIN	MG	weakly argillic, trace phyllic granodiorite interval containint 1 - 2 cm mineralized veins. Blebby pyrite and semi massive pyrite is observed in vein @ 213.22m and semi massive pyrite in gouged, vein @ 213.55m. Pyrite in vein @ 213.22 is contained within a ankerite infilled quartz vein. Milky quartz inclusions appear to offset vein @ 213.22m Sub-mm sphalerite crystals are observed within vein and milky quartz.
213.64	214.00	0.36	GRD	GRD	MG	weakly argillic, moderately propylitic granodiorite interval. Trace disseminated pyrite is observed within 1-2 mm quartz veinlets and along fracture surfaces
214.00	216.65	2.65	GRD	GRD	MG	weakly argillic, propylitic granodiorite interval with alternating zones of weakly potassic, moderately propylitic and weak argillic alteration. Disseminated pyrite occurs within sub-mm veinlets and blebby pyrite occurs in fracture surfaces (i.e. 215.85m). Fracture surfaces in rubbly zone @ 216.30 are locally observed.
216.65	217.07	0.42	GRD	GRD	MG	locally fractured interval of weakly phyllic, trace argillic granodiorite. (interval is moderately silicified and trace pyrite is observed within grd and in quartz veins. Blebby pyrite along fracture surface @ 217.07 is observed
217.07	218.42	1.35	GRD	GRD	MG	gouge brecciated and locally rubbly sections of moderate argillic, weak propylitic granodiorite. Trace, disseminated pyrite is observed within grd unit.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
218.42	220.70	2.28	GRD	GRD	MG	trace potassic, propylitic, relatively unaltered granodiorite with intermittent small zones of weak argillic alteration. Calcite and quartz brecciated host grd @ 219.60m. Trace 1-2 mm, quartz veinlets also occur in interval
220.70	222.29	1.59	GRD	GRD	MG	fractured interval of weakly propylitic, trace potassic, weak argillic granodiorite. Reddish hematitic oxidation occurs along joint surfaces.
222.29	223.00	0.71	GRD	GRD	MG	Trace potassic, propylitic grd with local zones of weak argillic alteration
223.00	223.50	0.50	GRD	GRD	MG	weak propylitic, argillic granodiorite interval
223.50	224.03	0.53	GRD	GRD	MG	weakly argillic, trace phyllic and propylitic granodiorite interval containting trace pyrite blebs within host grd. Euhedral pyrite crystals are also obseved in fracture surface @ 229m.
224.03	224.37	0.34	GRD	GRD	MG	Fractured, brecciate interval or weakly argillic, trace propylitic, phyllic granodiorite. Disseminate pyrite is observed within fractured zones and within competent grd rock.
224.37	225.19	0.82	GRD	GRD	MG	Weakly propylitic, trace phyllic granodiorite interval containing mineralized veins @ 225.80-224.96 and 225.08-225.19. Blebby and disseminated pyrite , trace galena, and trae blackjack sphalerite is locally observed within vein zones. Pyrite occurs within dark grey, soft, (sericitized(?) bands within vein zone. Galena is observed within ankerite veining infilling vein zone. Ankerite vein appears to brecciate small pyrite bearing, dark grey clasts and grd clasts. Smaller 1-2 mm, pyrite bearing veinlets locally offset by fractures also occurs in interval. Trace, possibly chalcopyrite associated with pyrite rich zones is observed.
225.19	225.68	0.49	GRD	GRD	MG	weakly argillic, propylitic granodiorite interval. Trace pyrite is observed within grd host
225.68	225.94	0.26	VEN	GRD	MG	Mineralized vein zone gr interval containting blebby, disseminated pyrite, trace chalcopyrite. Pyrite is containted in dark grey, fine grained, gouge brecciated seams. Carbonitic infill Is locally observed within brecciated seams. Compared to previous vein zone, this vein zone contains mostly pyrite.
225.94	226.24	0.30	GRD	GRD	MG	weak propylitic, trace argillic granodiorite interval
226.24	229.00	2.76	GRD	GRD	MG	weakl argillic, propypilitic granodiorite with intermittent zones of increased potassic, propyliti alteration. Clay brecciationg is observed @ 227.85-228. Trace disseminated pyrite is observed in grd host. Trace 1-2 mm, quartz veinlets are also observed in interval.
229.00	230.12	1.12	GRD	GRD	MG	moderately argillic, weak propylitic granodiorite interval with local zones of reddish hematitic oxidation
230.12	231.75	1.63	GRD	GRD	MG	moderately argillic, trace propylitic and weakly potassic granodiorite interval.
231.75	232.84	1.09	GRD	GRD	MG	relativel unaltered grd interval (trace potassic propylitic(?) Minor chlorite and K-spar component observed).
232.84	233.26	0.42	GRD	GRD	MG	moderate argillic, potassic granodiorite interval

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
233.26	233.42	0.16	GRD	VEIN	MG	fractured interval of weakly propylitic argillic granodiorite. Trace disseminated and blebby pyrite occurs in interval
233.42	233.86	0.44	VEN	VEIN	MG	polymetallic vein (veins are ~ 40 degrees TCA) zone in fractured, trace peopylitic,phyllic and argillic granodiorite. Polymetallic vein contains semi massive galena, blebby arseno pyrite near galena, semi massive pyrite, Trace chalcopyrite and honey brown zoned sphalerite blebs. Zone contains 4 1-2 cm polymetallic veins of which two are enriched in galena, sphalerite and arsenopyrite. Sphalerite and arseno pyrite are observed within and rimming quartz vein. Trace milky quartz, ankerite and rhodochrosite inclusions in mineralized veins are locally observed as well.
233.86	234.30	0.44	GRD	VEIN	MG	Weakly propyplitic, trace potassic , fractured granodiorite interval. Disseminated pyrite is observed within interval.
234.30	234.45	0.15	VEN	VEIN	MG	Polymetallic vein zone in weakly propylitic, trace argillic granodiorite. Three polymetallic veins can be identified in interval and range from 2-5mm. Veins contain semi massive pyrite, galena, sphalerite and trace arsenopyrite. Galena appears is associated with sphalerite rich zones (sphalerite appears partially zoned; honey brown and black within a single grain). Blebby pyrite also occurs within grd.
234.45	235.35	0.90	GRD	VEIN	MG	gouged, brecciated, weakly argillic, propylitic granodiorite interval containting disseminated and blebby pyrite. Pyrite occurs within, dark grey, soft gouged brecciated seams
235.35	235.61	0.26	VEN	VEIN	MG	Polymetallic vein zone containting semi massive pyrite, galena, blebby sphalerite, disseminated arseno and chalcopyrite. Sphalerite is spatially associated with galena rich zones. Arseno and chalco pyrite are observed in pyrite rich zones. Ankerite is also observed in vein zone where it partially infills mineralized vein zone. Small calcite infill fractures perpendicular to vein zone offset ankerite vein locally.
235.61	238.35	2.74	GRD	GRD	MG	farctured, rubbly interva of weakly to moderate argillic , trace propylitic granodiorite with intermittent zones of trace potassic alteration. Disseminated pyrite is observed throughout rubbly interval
238.35	238.68	0.33	GRD	GRD	FG	rubbly granodiorite interval (cave(?)) . Disseminated pyrite is commonly observed within fine rubbly zone.
238.68	239.22	0.54	GRD	GRD	MG	fractured, weakly argillic, trace potassic and trace propylitic granodiorite. Trace disseminated pyrite is observed in fractured zone
239.22	242.26	3.04	GRD	GRD	MG	trace potassic, propylitic granodiorite interval with local fractured zones and intermittent increased propylitic, argillic sections.
242.26	243.70	1.44	GRD	GRD	MG	fractured, rubbly trace propylitic, potassic granodiorite. Reddish hematitic oxidation is locally observed.
243.70	244.60	0.90	GRD	GRD	MG	moderate propylitic, weakly argillic granodiorite interval. Reddish hematite oxidation is observed on interval
244.60	245.35	0.75	GRD	GRD	MG	weakly argillic, propylitic granodiorite interval with local geouge brecciated sections.
245.35	246.00	0.65	GRD	GRD	MG	gouged , brecciated , moderatel argilic, trace propylitic granodiorite.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
246.00	246.70	0.70	GRD	GRD	MG	weakly propylitic, trace argillic granodiorite interval. Trace pyrite is observed in grd host.
246.70	247.24	0.54	GRD	GRD	MG	weakly argillic, trace propylitic, potassic granodiorite interval containting 1-2 mm quartz veinlets
247.24	248.75	1.51	GRD	GRD	MG	weakly propylitic, argillic and trace potassic tranodiorite interval containting a rubbly zone from 247.65-247.90. Disseminated and blebby pyrite is locally observed in rubbly grd section
248.75	249.65	0.90	GRD	GRD	MG	trace propylitic granodiorite overprinting trace argillic and potassic alteration. Interval is fractured.
249.65	252.23	2.58	GRD	GRD	MG	weakly argillic , propylitic granodiorite with intermittent zones of trace potassic altered grd. Soft, gouge brecciated seams are locally observed throughout interval. a 2 cm, light pink, rhodochrosite infilled, pyrite bearing quartz vein is observed. A 1 cm, milky quartz vein is observed @ 251.18m. A fractured, grd section is observed @ 250.70-250.90m.
252.23	252.70	0.47	GRD	GRD	MG	Gouged, brecciated and sheared interval of weakly argillic and trace propylitic granodiorite. Dark grey, fine grained, sheared pyrite bearing veins are locally observed . 1-3 mm, carbonitic clasts entrained in pyrite bearing veins are also observed.
252.70	253.74	1.04	GRD	GRD	MG	moderately argillic weakly propylitic and potassic granodiorite interval.
253.74	254.43	0.69	GRD	GRD	MG	weakly argillic, trace potassic, propylitic granodiorite interval. Trace 1-2 mm, quartz veinlets occur in interval and contain trace disseminated pyrite.
254.43	255.73	1.30	GRD	GRD	MG	weakly potassic, argillic granodiorite interval containting local rubbly zones. Dark grey, sub-mm, veinlets containting trace sub-mm pyrite occur in interval.
255.73	257.10	1.37	GRD	GRD	MG	locally fractured, weakly argillic, propylitic granodiorite interval.
257.10	258.77	1.67	GRD	GRDA	MG	fractured interval of weakly potassic, argillic, trace propylitic granodiorite. A 1 cm quartz vein containting trace sphalerite bleb is observed @ 257.60m. Pyrite bearing veinlet containting blebby pyrite and sphalerite occurs @ 258.45m. Vein is locally offset by fracturing. Reddish hematite oxidation is observed along fractures/joint surfaces.
258.77	259.38	0.61	GRD	GRDA	MG	Moderate potassic, weakly propylitic trace argillic granodiorite interval. Trace disseminated pyrite is observed in less potassic zones proximal to vein zone i.e. 259.28m.
259.38	259.78	0.40	VEN	GRDA	MG	pyrite bearing vein zone (~ 45 degrees TCA) in weakly argillic, propylitic granodiorite. Vein is brecciated and infilled by hematite andkerite and calcite (calcite and ankerite appear to brecciate vein zone. Blebby pyrite is observed within quartz vein and within dark grey, fine grained gougy seams. Ankerite appears to interstitially surround quartz lasts within quarz vein. Trace disseminated, euhedral cubic pyrite crystals occurs within altered granodiorite interval.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
259.78	261.28	1.50	GRD	GRDA	MG	Fractured interval of weakl potassic, propylitic and tracce argillic granodiorite. Chlorite and reddish hematite oxidation is commonly observed in fracture and joint surfaces.
261.28	262.44	1.16	GRD	GRDA	MG	more competent interval of weakly potassic, propylitic and trace argilic granodiorite. Minor gouge brecciation is locally observed in section. Trace 1-2 mm quartz veinlets are also observed in interval.
262.44	262.75	0.31	VEN	GRDA	MG	Vuggy pyrite breccia containting trace pyrite in moderate argillic, trace propylitic granodiorite. Pyrite is observed wtihin dark, fine grained bands surrounded by ankerite and at the rims of quartz/ankerite breccia zone. Trace sub-mm sphalerite crystals are also present in vein breccia zone. Trace galena, is observed in light pink rhodochrosite bands, where rhodochrosite appears to interstitially surround small galena blebs. Ankerite bands microbrecciate quartz clasts as well.
262.75	263.02	0.27	GRD	GRDA	MG	weakly argillic, propylitic granodiorite interval containing trace, disseminated pyrite in host grd and within dark, grey, soft veinlets.
263.02	265.00	1.98	GRD	GRD	MG	interval compososed of moderate potassic, weakly argillic/ propylitic granodiorite. Interval is locally fractured and contains chlorite and hematite oxidation along fractures and joint surfaces.
265.00	265.44	0.44	GRD	GRD	MG	moderate argillic, weakly propylitic trace propylitic granodiorite interval containting trace fine grained disseminated pyrite .
265.44	265.72	0.28	VEN	GRD	FG	vein zone in weakly argillic, propylitic granodiorite. Three veins (to are ~ 45 degrees TCA and a clear quartz vein is ~ 5 degrees TCA) are observed and are ~ 1 cm thick. Disseminated pyrite and trace blackjack sphalerite occurs within quartz vein zones. Pyrite also occurs in dark grey, fine grained bands within quartz vein. Ankerite infills and brecciates pyrute bearing quartz vein. Trace honey brown sphalerite is spatially associated with small pyrite bands within quartz vein.
265.72	267.87	2.15	GRD	GRD	MG	moderate argillic, weakly potassic and trace propylitic granodiorite interval. Trace 1-3 mm, pyrite bearing quartz veinlets are observed. Trace pybrite is also observed in sub-mm dark grey bands within interval.
267.87	269.62	1.75	GRD	GRD	MG	weak argillic alteration overprinting weak potassic and trace propylitic alteration in granodiorite interval. From 269-269.62, interval is fractured and exhibits soft, gouged seams.
269.62	272.31	2.69	GRD	GRD	MG	Fractured interval of weakly potassic, trace propylitic granodiorite. Dark red hematitic oxidation is observed along fractures and joint surfaces.
272.31	276.35	4.04	GRD	GRD	MG	light pink, weakly to moderately silicified, weakly potassic, argillic granodiorite interval. Interval is fractured and contains sub-mm, reddish, magnetic bands and irregular inclusions .
276.35	277.00	0.65	GRD	GRD	MG	rubbly, fractured interval composed of moderately argillic, trace propylitic granodiorite. Trace disseminated pyrite is observed in rubbly zones and within quartz vein fragments in rubbly zones. Vein fragments contain pyrite bearing dark grey, bands and light pink 3-4 mm, rhodochrosite veins. Fault related interval (?)(interval is highly fractured but no shearing, or fault brecciation is observed).

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
277.00	278.13	1.13	GRD	GRD	MG	moderate potassic, weakly argillic granodiorite interval with local gouge brecciated zones. Brecciated zones contain fine grained disseminate pyrite bands.
278.13	279.64	1.51	GRD	GRD	MG	moderate argillic, trace propylitic, weakly silicified granodiorite interval containing sub-mm, dark grey, pyrite bearing bands. Trace, 1-2 mm, offset, ankerite infilled, sphalerite/pyrite veinlets are also observed in interval
279.64	280.00	0.36	GRD	GRD	MG	rubble interval of moderately argillic, trace propylitic granodiorite containting sub-mm, dark grey, pyrite bearing bands.
280.00	281.70	1.70	GRD	GRD	MG	moderately argillic, trace propylitic, weakly silicified granodiorite witih local rubbly zones. Pyrite occurs in sub-mm, dark grey fine grained bands. Gouged, brecciated sections are observed in interval as well.
281.70	284.57	2.87	GRD	GRD	MG	moderately argillic, trace potassic, weakly silicified granodiorite interval with local rubbly, fractured and gouge brecciated zones. Interval appears slightly more potassic than last and contains sub-mm, dark, magnetic inclusions almost giving the grd host a cracked texture. Trace disseminated pyrite is observed on rubbly zones and within dark, grey, fine grained bands.
284.57	285.75	1.18	GRD	GRD	MG	locally gouged, brecciated, moderate propylitic, weakly argillic granodiorite interval. Pyrite occurs within 1 mm, dark grey, soft veinlets. Pyrite is more abundant in brecciated zones.
285.75	286.32	0.57	GRD	GRD	MG	gouged, brecciated , moderately propylitic granodiorite interval (fault brecciated (?), fault hanging wall (?). Disseminated pyrite occurs within dark, grey, gouged breccited seams within grd unit. Trace, 4 mm, quartz vein (20 degrees TCA) containting pyrite and sphalerite blebs is observed @ 285.85m.
286.32	288.33	2.01	GRD	GRD	MG	flocally fractured, gouged brecciated , moderately propylitic granodiorite interval. Pyrite occurs within 1 mm, dark grey, fine grained veinlets and within 1 mm, quartz veinlets. Pyrite is also observed within gouged brecciated seams.
288.33	288.57	0.24	VEN	GRD	MG	fractured,polymetallic vein zone containting semi massive pyrite, galena, trace sphalerite and possibly arsenopyrite. Pink, rhodochrosite is commonly observed within polymetallic bearing veins. (rhodochrosite partially infilling and brecciating mineralized vein zone and host grd).
288.57	290.00	1.43	GRD	GRD	MG	fractured interval of weakly propylitic, trace argillic granodiorite. Disseminated pyrite is locally observed thourhgout grd host and within soft, gouged seams.
290.00	291.48	1.48	FLR	GRDF	MG	fault hanging wall composed of trace potassic, trace propylitic granodiorite. Interval is fractured and contains chlorite along fracture,join surfaces. Trace disseminated pyrite is observed within fractured grd interval.
291.48	293.00	1.52	FLT	GRDF	FG	rubbly, gouged, brecciated fault interval. Entrained clasts are observed within brecciated zones.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
293.00	294.57	1.57	FLR	GRDF	MG	fault footwall interval composed of moderately propylitic granodiorite. Gouged brecciation and vein brecciation is locally observed in interval. disseminated pyrite is present in dark grey, fine grained gouged, brecciated sems and within brecciation zones. Ankerite and milky quartz appear to brecciated altered grd host. Red, hematitic infill in small , irregular veinlets is also observed on interval.
294.57	295.37	0.80	GRD	GRDF	MG	Gouged, brecciated and fractured moderately propylitic granodiorite. A vein breccia containting fine , disseminate pyrite where ankerite brecciates host rock occurs proximal to fault footwall section. 1-2 mm, black tourmaline blebs occur @ 294.96m.
295.37	295.66	0.29	GRD	GRDF	MG	rubbly interval of moderately propylitic granodiorite. Trace disseminated pyrite is locally observed on interval.
295.66	296.10	0.44	FLR	GRDF	FG	rubbly interval of weakly potassic granodiorite
296.10	296.60	0.50	FLR	GRDF	FG	weakly potassic, trace propylitic granodiorite interval containting moderate hematite alteration.
296.60	300.00	3.40	FLR	GRDF	FG	fractured and rubbly interval of weakly potassic granodiorite interval exhibiting moderate hematite oxidation. (fault zone(?)).
300.00	300.58	0.58	FLR	GRDF	MG	farctured, weakly potassic trace propylitic granodiorite interval with trace disseminated pyrite along fracture surfaces.
300.58	301.43	0.85	GRD	VEIN	MG	Fractured, gouged interval of moderately propylitic granodiorite containin 3mm-2 cm polymetallic veins. Vein @ 300.75 m contain blebby arsenopyrite, blebby pyrite (within arseno bearing zone) and trace galena and sphalerite within ankerite. Ankerite appears to brecciated and partially infill polymetallic vein. Blebby an disseminate pyrite is also observed within altered grd. Vein zone also contains light grey, quartz brecciating ankerite and mineralized quartz veins.
301.43	302.20	0.77	GRD	GRDA	MG	weakly argillic, trace propylitic granodiorite , fracture granoiorite interval
302.20	302.60	0.40	VEN	GRDA	MG	weakly propylitic granoiorite containting 1-4 mm, quartz veins. Quartz veins contain pyrite bearing, sub-mm, fine grained bands. Blebby pyrite pyrite is observed within altered grd proximal to veins (most pyrite is around veins with very little pyrite within the actual veins). Carbonitic infill (rhodochrosite(?), slightly pink) appears to brecciated quartz veins.
302.60	303.95	1.35	GRD	GRDA	MG	weakly to moderate argillic trace propylitic granodiorite interval containting reddish hematite oxidation along fractures. Chlorite is also observed along fracture surfaces.
303.95	304.40	0.45	GRD	GRDA	MG	fractured interval of weakly argillic trace propylitic granodiorite. Trace disseminated pyrite occurs within grd host and is observed within carbonate infilled, quartz veins (i.e. 304m).
304.40	305.56	1.16	GRD	GRDA	MG	sheared, fractured, weakly propylitic, argillic granodiorite interval.

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
0.00	1.40	1.40	OVB	--	ovb							
1.40	11.22	9.82	GRD	MG	Granodiorite interval with trace propylitic potassic (chlorite and K-spar oberved in grd interval) and local zones of weak argilic alteration. Interval is ractured and contains reddish/brownish clay oxidation along fracture and joint surfaces. Highly fractured rubbly zone is observed @ 8.15-8.60m (zone of local argillic alteration).

269.62	272.31	2.69	GRD	MG	Fractured interval of weakly potassic, trace propylitic granodiorite. Dark red hematitic oxidation is observed along fractures and joint surfaces.							

From (m)	To (m)	Interval (m)	Rock Type	Grain Size	Description	Shade	Colour	Texture	Alteration	Intensity	Mineral	Conc.
272.31	278.13	5.82	GRD	MG	moderately silicified, weakly potassic, weak to moderately argillic granodiorite with locally fractured and rubbly zones. 1 mm, dark red, magnetic bands and irregular linear inclusions are locally observed throughout interval. Rubbly intervals exhibit less potassic and increased argillic alteration. Fine grained disseminated pyrite is observed within rubbly zones and within vein fragments in rubbly zones (vein fragments contain pinkish, rhodochrosite and dark grey, fine grained , pyrite bearing bands).

278.13	284.57	6.44	GRD	MG	moderately argillic , trace propylitic granodiorite interval with local rubbly zones. Interval contains sub-mm, dark grey, pyrite bearing bands and increased quartz clasts (weakly silicified). Gouged, brecciated zones are commonly observed throughout interval.							
284.57	290.00	5.43	GRD	MG	interval composed of weakly to moderate propylitic, weakly argillic and intermittent zones of trace potassic, argillic granodiorite. Gouged brecciated and rubbly zones are locally observed. (interval exhibits increased propylitic alteration and increased pyrite within grd host). Rubbly, mineralized zones (i.e. 288.40-288.57m) contain semi massive pyrite, galena and trace arseno pyrite within rhodochrosite infilled, quartz veins.

290.00	295.66	5.66	GRD	MG	fractured and rubbly trace potassic , weakly to moderate propylitic grd interval. Fault zone is rubbly and gougy. Fault foot wall is gouged, brecciated and moderately propylitic. Pyrite, trace galena and rhodochrostite bearing vein fragments in faulted section are locally observed. Vein brecciation is also observed in fault brecciated zones where ankerite brecciates host grd and hosts fine grained pyrite.

295.66	300.58	4.92	GRD	MG	interval composed of locally fractured zones of weakly potassic, trace propylitic granodiorite with intermittent zones of increased hematitic oxidation (hematite ozidation increases with depth. Rubbly zones occur from 297-300.58m (faulted interval). Trace, hematite infilled veinlets are observed thourhgout interval.

						DK	RD					
300.58	301.43	0.85	GRD	MG	Fractured, gouged interval of moderately propylitic granodiorite containin 3mm-2 cm polymetallic veins. Vein @ 300.75 m contain blebby arsenopyrite, blebby pyrite (within arseno bearing zone) and trace galena and sphalerite within ankerite. Ankerite appears to brecciated and partially infill polymetallic vein. Blebby an disseminate pyrite is also observed within altered grd. Vein zone also contains light grey, quartz brecciating ankerite and mineralized quartz veins.

301.43	305.56	4.13	GRD	MG	trace potassic, propylitic granodiorite with intermittent zones of argillic and weakly propylitic alteration. Local rubbly, fractured zones are common throughtout interval. From 304.72-305.56m interval is sheared (fracturing along shear planes (?)). Quartz vein containting trace pyrite is observed @ 302.30-302.64m. Disseminated pyrite interstitially surrounding host grd near vein zone is observed.

139.36	139.40	VN	37	50	NUL	1	pyrite bearing, vuggy quartz vein in altered grd			
143.45	143.60	DY	37	40	NUL	1	3 cm, pink, fine grained aplite dyke intrusion in altered grd. Blebby tourmaline observed near dyke inclusion			
143.75	143.85	VN	37	30	NUL	1	pyrite bearing quartz vein brecciated host grd and partially infilled by calcite			
150.12	150.30	VN	37	40	NUL	1	pyrite bearing vein zone. Pyrite is hosted in dark grey smoky quartz surrounded and brecciated by milky quartz/ ankerite and rhodochrosite veins			
								Py	5	DI
								Ak	5	BL
								Rh	3	BL
155.45	155.60	VN	37	40	NUL	2	stringer veins in altered grd containing diseminated pyrite			
159.50	159.55	VN	37	20	NUL	1	1 cm calcite vein in potassic altered grd			
167.40	167.50	VN	37	30	NUL	1	pyrite bearing, quartz vein in altered grd			
193.85	193.97	VN	37	35	NUL	1	mineralized vein in grd containting galena, pyrite arsenopyrite and sphalerite			
209.20	209.24	VN	37	45	NUL	1	pyrite bearing quartz vein in grd			
233.45	233.70	VN	37	30	NUL	2	polymetallic quartz veins in rubbly, fractured granodiorite interval. Semi massiv pyrite, galena, trace arseno pyrite and sphalerite occur within vein with trace ankerite inclusions within vein. Galena is spatially associated with sphalerite.			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
								As	3	DI
								Py	8	BL
								Gn	6	BL
								Py	6	DI
								Ak	2	BL
233.70	233.86	VN	37	35	NUL	2	pyrite rich quartz vein in granodiorite. Vein interval contains more pyrite and less galena than previous vein interval.			
234.30	234.40	VN	37	45	NUL	2	polymetallic veins in granodiorite. Pyrite, galena, sphalerite and trace arseno pyrite are observed.			
234.69	235.15	BX	34	0	NUL	1	gouge brecciated, pyrite bearing altered granodiorite. Vein footwall(?)			
235.31	235.55	VN	37	40	NUL	2	polymetallic quartz vein in altered granodiorite. Semi massive pyrite, sphalerite, galena and trace arseno pyrite occur in vein zone. Ankerite infill within sphalerite-galena vein is observed. Small fractures locally offset vein locally.			
249.96	250.00	VN	37	40	NUL	1	milky quartz vein in altered grd. Trace pyrite observed in vein			
251.14	251.18	VN	37	40	NUL	1	milky quartz vein in gouged, brecciated granodiorite interval			
252.30	252.81	SH	81	40	NUL	1	pyrite bearing quartz veins in sheared, brecciated granodiorite interval.			
259.58	259.73	VN	37	40	NUL	1	brecciated, pyrite bearing vein in altered grd. Ankerite appears to brecciated host grd and to partiall infill and fracture host quartz vein. Red hematite bands are also observed within vein interval. Pyrite is blebby an appears interstitially surround quartz vein			
262.60	262.73	VN	37	45	NUL	2	1-4 cm pyrite bearing veins in altered grd. Largest vein is brecciated and ankerite appears to partially infill quartz vein.			
265.34	265.74	VN	37	45	NUL	2	1-2 cm, quartz vein containting trace blebby pyrite. Vein @ 265.74 appears to brecciate host grd			
285.70	286.30	SH	81	0	NUL	1	gouge, brecciated and sheared interval of altered grd. Pyrite is hosted in thin, dark grey, fine grained veinlets.			
291.48	292.22	FT	42	0	NUL	1	rubbly, gouged fault in altered grd			

From (m)	To (m)	Structure Type	MapInfo Code	Attitude TCA	Attitude TRFE	Structure Count	Description	Mineral	Conc.	Mineral Texture
300.70	300.76	VN	37	55	NUL	1	vein containing semi massive arseno pyrite and trace pyrite. Carbonitic infill is locally observed in vein interval

78.50	79.45	0.95	GRD	GRDA	MG	medium grained, wealy propylitic altered granodiorite
79.45	80.30	0.85	GRD	GRDM	MG	medium grained, strongly propylitic altered granodiorite with quartz veinlets with pyrite
80.30	82.00	1.70	GRD	GRDA	MG	medium grained, moderately argillic altered granodiorite with a weak propylitic overprint
82.00	85.10	3.10	QFP	DYK	MG	tan brown to grey feldspar porphyryitic with a fine-grained groundmass dyke
85.10	85.70	0.60	GRD	GRDM	MG	faulted, weakly brecciated granodiorite with a dark grey to black groundmass and minor dyke intermingled within interval. Weak disseminated pyrite thorughout interval; likely fault related
85.70	101.10	15.40	QFP	DYK	MG	medium greenish grey to brownish grey, clay and chlorite altered feldspar porphyrytic dyke with a fine-grained groundmass. Variably altered between weak to moderate chloritized and clay altered feldspars within a fine-grained weakly chloritized groundmass.
101.10	101.86	0.76	GRD	GRDM	MG	medium grained, dark grey, silicified and propylitic altered granodiorite with weak pyrite bearing quartz stringer veinlets. Sharp upper and lower contct with dyke
101.86	109.80	7.94	QFP	DYK	MG	porphyritic tan brown to dark brown feldspar porphyritic dyke with weak clay alteration of feldspar grains.
109.80	114.60	4.80	QFP	DYK	MG	light green feldspar porphyry dyke, likely similar phase to the one described above (gradational upper ocntact with brown dyke; similar porphyritic texture, only difference between them is colour); with chloritized and clay altered groundmass and feldspar grains
114.60	115.60	1.00	QFP	DYK	MG	porphyritic tan brown to dark brown feldspar porphyritic dyke with weak clay alteration of feldspar grains.
115.60	116.30	0.70	GRD	GRDA	MG	intensely clay altered; likely faulted ontact between granodiorite and dyke (above).
116.30	117.65	1.35	GRD	GRDA	MG	medium grained, moderately propylitic altered granodiorite with weak (2) pyrite bearing quartz veinlets
117.65	120.40	2.75	GRD	GRDM	MG	medium grained, weakly brecciated granodiorite with dissemianted pyrite along groundmass and on edges of some brecciated clasts of granodiorite. Stockwork-like hairline clay fractures contain trace pyrite along them; weak pyrite +- sphalerite bearing quartz veinlets dispersed throughout interval

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
120.40	122.00	1.60	GRD	GRDM	MG	medium grained alternating between moderately argillic altered and moderately propylitic altered granodiorite. Propylitic altered sections are medium greyish green, and argillic sections are whitish green. Strongly propylitic altered zones host disseminated pyrite in groundmass and within pyrite veinlets
122.00	123.70	1.70	GRD	GRDA	MG	medium grained, light greenish white to greenish grey, moderately argillic altered granodiorite with a weak propylitic and siliceous alteration overprint. Silceous zones are darker grey and have weak disseminted pyrite in granodiorite groundmass
123.70	124.10	0.40	GRD	GRDM	MG	silicified strongly propylitic altered granodiorite with two sphalerite bearing 1 cm wide carbonate veinlets
124.10	125.00	0.90	GRD	GRDM	MG	silicified strongly propylitic altered granodiorite with patchy dissemianted tourmaline and pyrite alteration; one small 1 cm wide veinlet with pyrite and fine-grained galena
125.00	126.12	1.12	GRD	GRDA	MG	moderately silicified and propylitic altered granodiorite with one patch of tourmaline and one stringer veinlet with pyrite.
126.12	126.75	0.63	GRD	GRDM	MG	silicified strongly propylitic altered granodiorite with patchy dissemianted tourmaline and pyrite alteration; one small 1 cm wide veinlet with pyrite and fine-grained galena. Small 2 cm wide zone of brecciation within interval; barren of sulphide
126.75	127.36	0.61	GRD	GRDA	MG	moderately propylitic altered granodiorite
127.36	127.50	0.14	GRD	GRDF	MG	faulted, rubby fractured granodiorite likely related to faulitng
127.50	128.60	1.10	GRD	GRDM	MG	fractured, moderately silicified and propylitic altered granodiorite with disseminated pyrite thoughout groundmass
128.60	130.30	1.70	GRD	GRDA	MG	heavily fractured, competent, yet strongly clay altered granodiorite with stockwork hairline clay-fractures throughout. Weak brecciated texture throughout interval. No sulfides
130.30	131.30	1.00	GRD	GRDA	MG	silicified and propylitic altered granodiorite with disseminated pyrite throughout interval
131.30	131.90	0.60	GRD	GRDF	MG	intensely clay altered, faulted clay gouged granodiorite.
131.90	133.18	1.28	QFP	DYK	MG	tan brown with weakly clay altered freldspar porphyryitic dyke, heavily fractured near upper cotact with fault, and less dense fractures as you move downhole. Last 10 cm of lower conatc is fractured, as you hit another faulted section and colour change in the dyke.
133.18	133.62	0.44	QFP	DYK	MG	faulted dyke, heavily clay altered and fractured. Light greenish grey
133.62	134.05	0.43	QFP	FLT	MG	heavily faulted dyke/granodiorite mix with heavy clay alteration

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
134.05	136.50	2.45	GRD	GRDM	MG	wekaly argillic altered granodiorite with a strong siliceous and porpylitic overprint. Medium to dra grye, heavily fractured, with dissemianted patch tourmaline and dissminated pyrite throughout. Pyrite is develeoped along fracture surfaces as well as clay. Patchy banded pyrite along fractures throughout interval
136.50	136.64	0.14	VEN	VEIN	MG	quartz rich milky white quartz vein with 3 1 cm wide bands of pyrite trending 70 TCA
136.64	137.20	0.56	GRD	GRDM	MG	moderate siliceous and propylitic altered granodiorite with traec dissem pyrite
137.20	138.64	1.44	GRD	GRDA	MG	weakly silicifed and pyropyltic altered granodiorite with no visible sulfide
138.64	141.00	2.36	QFP	DYK	MG	tan brown feldspar porphyritic dyke with weak two carbonate veinlets developed running parallel TCA
141.00	142.45	1.45	GRD	GRDA	MG	heavily fractured and clay altered granodiorite with dense stockwork of hairline clay farctures. One small section with banded grey fine-grained minerals (see secondary). Trending 70 TCA
142.45	149.57	7.12	QFP	DYK	MG	tan brown to patchy greyish green, weakly clay altered feldspar porphyryitic dyke, with weak clay alteration along fractures and small carbonate veinlets running 30 TCA with 1cm wide bleached alteration haloes - no sulfide
149.57	149.85	0.28	GRD	GRDF	MG	heavily fractured, brecciated mixture between GRD and QFP denoting a faulted contact between dyke (above) and GRD (below).
149.85	150.90	1.05	GRD	GRDM	MG	medium grained, strongly argillic altered and moderately propylitic altered granodiorite with disseminated patchy pyrite along the intensely argillic altered intervals, and with trace dissemianted pyrite throughout the propylitic altered intervals
150.90	152.20	1.30	GRD	GRDA	MG	meidum grained, weakly argillic and propylitic altered granodiorite with sparse rubbly sections, likely weak faulting.
152.20	153.47	1.27	GRD	GRDF	MG	heavily fracuted, rubbly, gravelly interval of intensely clay altered granodiorite. Not fualt gouge, but heavily rubby
153.47	156.00	2.53	GRD	GRD	MG	unaltered granodiorite, weak carbonate on rare fractures
156.00	157.00	1.00	GRD	GRDA	MG	weak to moderate propylitic altered granodiorite
157.00	158.50	1.50	GRD	GRDA	MG	weak to modearte argillic altered granodiorite with a weak propylitic overprint.
158.50	159.00	0.50	GRD	GRDM	MG	moderate to strong propylitic altered granoiroite with four two mm wide stringers with pyrite, and weak sphalerite
159.00	160.50	1.50	GRD	GRDM	MG	moderately propylitic granodiorite with seven small mm-scale stringer vienlets that have trace pyrite
160.50	161.33	0.83	GRD	GRDA	MG	moderately argillic altered granodiorite
161.33	162.50	1.17	GRD	GRDA	MG	moderately propylitic altered granodioirte; weakly silicifed. No visible sulfide

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
162.50	165.50	3.00	GRD	GRDA	MG	moderately argillic altered granodiorite with fractured rubbly sections througout up to 10 cm long
165.50	168.00	2.50	GRD	GRDA	MG	medium grained, strongly propylitic altered granodiorite with weak argillic alteration
168.00	169.30	1.30	GRD	GRDM	MG	strongly silicified, with rare brecciated intervals up to 3 cm wide, moderately propylitic altered granodiorite with 8 small 0.5 cm wide pyrite bearing quartz veinlets

234.70	235.25	0.55	VEN	MG	trace phyllic alteration overprinting weakly propylitic granodiorite. Interval is moderately silicified , contains disseminated pyrite in host grd. Interval contains soft,gouged brecciated seams containting disseminated pyrite as well. Vein zone at 234.96m is comprised of blebby galena in quartz vein, milky quartz vein surrounding and partially infilling and brecciating galena bearing quartz vein. Rhodocrosite and ankerite brecciate,partially replace and are interstitially foundin polymetallic quartz vein. Carbonates and quartz appear to brecciate host grd. Blebby pyrite, trace arsenopyrite are observed in breciated vein sections. Honey brown sphalerite is mostly restricted to galena rich areas.

44.60	45.25	0.65	GRD	GRDF	MG	fractured, trace argillic, propylitic , potassic granoiorite interval. mustard yello and dark red oxidation is observed along fracture surfaces.
45.25	46.30	1.05	GRD	GRDF	MG	less fractured interval of trace potassic, propylitic granoiorite. Mustard yellow and red hematitic oxidation is observed along fracture surfaces
46.30	47.24	0.94	GRD	GRDF	MG	rubbly, fractured interval of trace propylitic, potassic , trace argillic granodiorite. Light brown, mustard yellow clay oxidation is locally observed throughout interval.
47.24	47.90	0.66	GRD	GRDF	MG	fractured, oxidized interval of weak propylitic , trace argillic granodiorite. Pervasive oxidation of host grd is observed on interval.
47.90	49.10	1.20	GRD	GRDA	MG	weakly argillic, propylitic granodiorite interval . An oxidized, pyrite bearing quartz vein occurs @ 48.16m. Trace sub-mm, dark grey, bands , sometimes containing fine disseminated pyrite are also observed on interval. light brown clay and red hematitic oxidation occurs along fracture surfaces
49.10	50.10	1.00	GRD	GRDA	MG	Trace potassic, propylitic granodiorite interval. Calcite infilling fractures occurs locally .
50.10	50.48	0.38	GRD	VEIN	MG	moderately propylitic granodiorite interval and weak potassic, argillic granodiorite zone. Propylitic altered zone contains a 1 cm pyrite bearing smoky quartz vein. Milky quartz and ankerite appear to brecciated smoky quartz vein. Trace, ankerite blebs are observed in ankerite infill quartz vein. Overall vein zone appears to also brecciated host altered grd.
50.48	52.19	1.71	GRD	GRDA	MG	fractured, trace potassic, propylitic granodiorite interval. Oxidation in grd is observed @ 50.75m. Light brown, dark red, hematitic oxidation occurs along fractures and joint surfaces. Trace, 1 mm, dark, fine grained, oxidized bands occur within interval
52.19	53.00	0.81	GRD	GRDA	MG	weakly potassic, argillic granoiorite interval. Quartz, calcite infilled breccia zone is observed @ 52.54m.
53.00	53.34	0.34	GRD	GRDA	MG	trace potassic, trace propylitic grnodiorite interval. Liht brown oxidation is observed along fracture surfaces.
53.34	54.61	1.27	GRD	GRDA	MG	weakly argillic, trace potassic, trace propylitic granodiorite interval. a 1 cm, oxidized,pyrite bearing, calcite infilled quartz vein is observed @ 54.20m. Trace disseminated pyrite is observed within dark grey, fine grained lenses within grd interval. @ 53. 70, 2 1 cm pyrite bearing veins are observed. Pyrite is blebby in veins @ 53.70m.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
54.61	55.38	0.77	GRD	GRDA	MG	weak propylitic, weakly argillic granodiorite interval with intermittent unaltered grd zones. Pervasive oxidation occurs within more argillic zones. Trace 1-3 mm, calcite infilled, pyrite bearing quartz veins are locally observed in grd interval.
55.38	56.21	0.83	GRD	GRDA	MG	weakly argillic, trace phyllic, propylitic ,gouge brecciated granodiorite interval (brecciation and gouged seams are more prominent proximal to vein zone. Trace disseminated pyrite is observed in grd near vein zone.
56.21	56.66	0.45	GRD	VEIN	MG	Granodiorite interval containting mineralized vein breccia and 2-4 mm, pyrite bearing veins. Breccia vein zone contains semi massive pyrite within dark, fine grained matrix which is brecciated by calcite, clear quartz and ankerite. Ankerite appears to crosscut quartz breccia zones (post stage (?)). Clear quartz, brecciated clasts also host semi massive pyrite. Trace arseno pyrite is also observed within vein breccia zone. Vein breccia is observed from 56.29-39m. From 56.39-56.66, quartz vein contain blebby pyrite and trace honey brown sphalerite grains.
56.66	57.91	1.25	GRD	GRDA	MG	trace potassic, argillic granodiorite interval. Oxidation along fractures and joint surfaces is locally observed.
57.91	58.45	0.54	GRD	GRDA	MG	moderately argillic, trace potassic granodiorite . Interval is soft and brecciated by 2-4 mm, calcite veinlets. Reddish hematitic oxidation is locally observed in fractures/joint surfaces.
58.45	59.61	1.16	GRD	GRDA	MG	pervasively oxidized, gouged and fractured, weakly argillic, trace propylitic granodiorite interval. Disseminated pyrite is present in gouge brecciated sections.
59.61	61.23	1.62	GRD	GRDA	MG	Locally fractured and oxidized (59.61-59.85m), trace potassic, trace propylitic granodiorite interval. Interval contains 1-2 mm, dark, fine grained, strongly magnetic veinlets and irregular bands. Trace disseminated pyrite is observed throughout granodiorite interval.
61.23	64.01	2.78	GRD	GRDA	MG	weak to moderate potassic, weakly argillic granodiorite interval. Interval is locally fractured, contains chlorite, hematite slickenlines (fault related (?)) . 2 cm , light pink aplite dyke intrusion is observed @ 62.96-63.03m (35 degrees TCA).
64.01	65.53	1.52	GRD	GRDA	MG	moderately argillic, trace potassic , trace propylitic granodiorite. Gouged seams are observed from 64.90-65.53. A pyrite bearing quart vein is observed @ 64.50m. Disseminated pyrite and trace sub-mm sphalerite occur within quart vein. Ankerite vein parallel to pyrite bearing quartz vein is present in vein zone and brecciates quartz vein locally.
65.53	66.75	1.22	GRD	GRDA	MG	gouged, brecciated, fractured interval of moderately argillic, trace propylitic altered granodiorite. Pyrite,sphalerite blebs and trace galena are locally observed in 3-5 mm quart veins. Disseminated pyrite also occurs within gouge brecciated zone. (quartz vein in grd fractured fragment appears to run parallel to core axis). Minor 1-2 mm, ankerite veinlets partially infill and crosscut polymetallic quartz veins.
66.75	70.10	3.35	FLR	GRDA	MG	gouged, brecciated moderately argillic granodiorite (faulted interval (?)). Dark red hematitic oxidation is locally observed in fracture surfaces.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
70.10	70.40	0.30	GRD	VEIN	MG	gouged, breciated, moderate argillic, trace propylitic potassic granodiorite interval.trace disseminated pyrite is locally observed in gouge brecciated zone
70.40	70.51	0.11	GRD	VEIN	MG	dark grey, gouged, brecciated vein containting disseminated pyrite.
70.51	70.80	0.29	GRD	VEIN	MG	moderately argillic, trace propylitic granodiorite interval. Calcite brecciating host grd is observed on interval.
70.80	72.06	1.26	GRD	GRD	MG	weakly propylitic, argillic, trace potassic granodiorite interval containing 2-3 mm pyrite bearing vein @ 72m. Vein contains disseminated pyrite within a black, magnetic, fine grained matrix. Calcite infilling fracture surfaces is locally observed.
72.06	74.35	2.29	GRD	GRD	MG	weakly propylitic, trace potassic granodiorite interval with locally fractured zones (73.15-74.30m).
74.35	75.28	0.93	GRD	GRD	MG	moderate argillic, trace potassic, trace phyllic granodiorite inteval exhibiting local gouged, brecciated zone @ 75.10m, proximal to vein zone. Trace disseminated pyrite is locally observed within gouge brecciated section.
75.28	75.37	0.09	VEN	GRD	FG	vein breccia zone containting disseminated pyrite within dark grey, fine grained zones and within clear quartz vein. Dark grey material appears to brecciate clear quartz vein locally.
75.37	75.76	0.39	GRD	GRD	MG	weakly propylitic, trace argillic granodiorite interval. Gouge brecciation is locally observed in interval where calcite infills, fractured, brecciated seams. Calcite infilled, pyrite bearing quartz veins are locally offset by fracturing and brecciation. Trace disseminated pyrite and sub-mm sphalerite blebs are contained within quartz veins. Veins in gouge brecciated one appear vuggy as well.
75.76	77.72	1.96	GRD	GRD	MG	fractured, rubbly, moderately potassic, weakly argillic granodiorite interval. Some fragments in rubbly interval contain 3-5 mm, pyrite bearing, rhodochrosite infilled , quartz veins.
77.72	78.54	0.82	GRD	GRD	MG	weak to moderately potassic granodiorite with intermittent zone of weakly propylitic and argillic altered granodiorite. In propylitic altered zone, a calcite vein is locally offset by fracturing. Calcite appears to infill an existing quartz vein. Trace disseminated pyrite is observed around quartz vein.
78.54	80.20	1.66	GRD	GRDF	MG	weakly to moderate argillic granodiorite overprinting trace potassic alteration. Interval is fractured and rubbly and dark red heatitite oxidation and chlorite are observed along fracture/joint surfaces. Slickenlines also occur in joint surfaces.
80.20	85.10	4.90	FLR	GRDF	MG	gouged, brecciated , rubbly interval of moderate argillic granodiorite overprinting trace potassic and propylitic alteration. Faulted interval(?). Gouged sections are light to medium grey. No visible mineralization observed on interval.
85.10	87.00	1.90	FLR	GRDF	MG	fractured, weakly argillic,weakly potassic granodiorite overprinting trace propylitic alteration. Trace dissemianted pyrite is observed in fractured fragments within 1-2 mm, dark grey, bands.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
87.00	88.05	1.05	FLR	GRDF	MG	gouged, brecciated, weakly to moderately propylitic overprinting a trace argillic alteration. Dark, grey, clayey brecciated seams contain trace disseminated pyrite.
88.05	89.20	1.15	FLR	GRDF	MG	rubbly, gougy , moderately propylitic, trace argillic granodiorite. Trace dissemianted pyrite is locally observed within rubbly zone (pyrite more notable in dark grey, gougy seams). An ankerite infilled, pyrite bearing quartz vein is observed @ 89 m Ankerite appears to brecciate clear quartz vein.
89.20	90.18	0.98	FLR	GRDF	MG	Rubbly, fractured, gouged , weakly propylitic, argillic granodiorite. Trace disseminated pyrite is observed within rubbly zone.
90.18	92.96	2.78	GRD	GRD	MG	fractured, weakly propylitic, trace potassic granodiorite interval.
92.96	93.80	0.84	GRD	GRD	MG	weakly propylitic, trace potassic granodiorite interval. Interval appears weakly silicified.
93.80	95.50	1.70	GRD	GRDA	MG	Weakly potassic, trace propylitic and argillic granodiorite interval with local zones of increased potassic alteration. A 2 mm, quartz vein containting trace pyrite blebs is observed @ 93.96m. Ankerite brecciates and infills quartz vein. Quartz vein contains fine, black, sub mm- inclusions. Quartz vein is 35 degrees TCA.
95.50	97.23	1.73	GRD	GRDA	MG	fractured interval of weakly potassic altered granodiorite overprinting trace propylitic alteration. Trace pyrite blebs are locally observed along fracture surfaces in grd inteval (fractured along, vein surface(?)).
97.23	97.82	0.59	GRD	GRDA	MG	rubbly granodiorite fragments interval. Cave (?). Fragmnts contain potasic altered and propylitic altered grd fragments.
97.82	98.52	0.70	GRD	GRDA	MG	trace propylitic, potassic. Fractured granodiorite interval. polymetallic quartz vein fragment are locally observed on interval. Calcite appears to infill and microbrecciate vein polymetallic vein surfaces. Small, ankerite fragments are also observed in rubbly interval. Polymetallic vein contains pyrite, galena and blackjack sphalerite blebs.
98.52	100.58	2.06	GRD	GRDA	MG	weakly potassic, trace propylitic granodiorite with intermittent zones of trace argillic, weakly propylitic alteration (thin 1-2 mm, milky quartz veins occur in propylitic altered grd section). Locally fractured zones are locally observed @ 98.60 and 99.60m.
100.58	101.48	0.90	GRD	GRDA	MG	weakly propylitic, trace potassic granodiorite with intermittent zones of trace potassic, weakly argillic altered granodiorite. A 2 cm, pyrite bearing quartz vein is locally observed @ 101.29 in propylitic altered granodiorite zone. Two 1 cm, quartz veins are present in propylitic altered granodiorite zone @ 101.29m. Both veins appear quartz dominant and blebby pyrite and trace sphalerite occur within one of the veins mainly. The second vein adjacent to polymetallic quartz vein contains trace sphalerite and fine grained disseminated pyrite (NOTE: pyrite and sphalerite are more abundant in first quartz vein).Vein containting trace pyrite appear partially infilled by ankerite and/or calcite.
101.48	102.19	0.71	GRD	GRDA	MG	trace propylitic, potassic granodiorite interval.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
102.19	102.82	0.63	GRD	GRDA	MG	fractured, weakly argillic, trace potassic and propylitic granodiorite interval. Gouged seams are observed near the polymetallic vein zone contact.
102.82	103.00	0.18	VEN	VEIN	MG	propylitic altered granodiorite containting polymetallic vein @ 102.94m. Polymetallic vein contains semi massive pyrite , trace galena blebs and honey brown sphalerite blebs. Light pink, rhodochrosite infills polymetallic vein zone. Sub-mm, black, fine grained bands occur within rhodochrosite vein zones. (note most semi massive pyrite is hosted in smoky quartz vein. Gouged seam at the grd-vein zone contact contains fine grained disseminated pyrite. Blebby pyrite also occurs in host grd. Semi massive appears to surround sphalerite and galena blebs . (individual cubic galena crystals also occurs within rhodochrosite infilled veins.
103.00	103.80	0.80	VEN	VEIN	MG	gouged, brecciated, polymetallic vein zone in weakly propylitic granodiorite. Disseminated pyrite occurs within light grey, gouged seams and within brecciated altered grd. 2-5 mm, sphalerite blebs are locally observed wtihin calcite infilled vein @ 103.63m. Ankerite inclusions are observed wtihin calcite infilled polymetallic vein and appears to infill gouged, brecciated fracture surfaces. Blebby pyrite and trace galena are locally observed within gouge brecciated vein zone. Veins also appeared locally fractured and offset by gouge brecciation (fault related (?)).
103.80	104.18	0.38	GRD	VEIN	MG	weakly argillic granodiorite overprinting weak propylitic alteration. Disseminated and blebby pyrite is locally observed throughout granodiorite interval.
104.18	104.72	0.54	GRD	VEIN	MG	Gouged brecciated, fractured , weakly propylitic, argillic granodiorite interval. Disseminated pyrite is locally observed in gouge brecciated vein zones; contained within dark grey, fine grained gouged seams. Fracturing and brecciation locally offset ankerite infilled veins on interval.
104.72	106.50	1.78	GRD	VEIN	MG	weakly potassic, argillic granodiorite with local zones of gouged brecciation. Semi massive pyrite is observed on fracture and gouged surface @ 105.60m
106.50	108.26	1.76	GRD	VEIN	MG	weakly propyliticalteration overprinting by weak argilic altered granodiorite. Gouge brecciation is locally observed throughout interval. blebby pyrite occurs within 1-3 mm, quartz veins and are locally offset and fractured in breciated zones. A quartz vein containting trace pyrite blebs (20 degrees TCA) is observed @ 106.60m. Milky quartz appears to brecciate clear quartz vein and thin, sub-mm, dark grey, bands and ankerite partially infilling quartz veins is locally observed.
108.26	108.60	0.34	GRD	VEIN	MG	gouged, rubbly trace propylitic, weakly argillic granodiorite containting disseminated pyrite in dark grey, gouged seams.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
108.60	109.24	0.64	VEN	VEIN	MG	weakly propylitic, trace argillic granodiorite interval containting four, 2-cm, rhodochrosite polymetallic veins and 2-4 mm, polymetallic quartz veins. Veins are ~ 40 degrees TCA and contain blebby pyrite, trace galena and sphalerite. Rhodochrosite appears to have replaced an existing quartz vein (quartz vein bearing mineral bearing fluids then rhodochrosite fluid replacement (?)). Small, quartz inclusions are observed in rhodochrosite bearing veins. Sub-mm, black, fine grained bands occur in polymetallic veins. Polymetallic veins are observed @ 108.61-109m. 2-4 mm, quartz veins containting blebby pyrite, trace galena and honey brown sphalerite appear to be locally offset by a 2 mm, calcite veinlet running perpendicular to polymetallic veins.
109.24	111.10	1.86	GRD	GRDA	MG	moderate potassic, trace argillic granodiorite with intermittent zones of weak argillic, trace propylitic granodiorite. A light grey, fine grained, carbonitic band (30 degrees TCA) is observed within potassic altered grd zone @ 109.92m. Trace 1-2 mm, dark grey bands containing disseminated pyrite are locally observed in more argillic grd sections. A small gouged seam occurs at 110.43m. A calcite infilled, quartz vein brecciating host grd is present @ 110.90m.
111.10	115.44	4.34	GRD	GRD	MG	relatively unaltered granodiorite interval (trace potassic, trace propylitic but otherwise relatively unaltered) with intermittent zones of weakly argillic, trace potassic and propylitic granodiorite (altered zones are no larger than 25cm). Local fracture zones are locally observed on interval as well.
115.44	115.71	0.27	GRD	GRD	MG	fractured, rubbly interval of relatively unaltered grd.
115.71	115.96	0.25	GRD	GRDA	MG	moderately argillic, trace potassic granodiorite interval. Gouge brecciation is observed proximal to polymetallic vein zone.
115.96	116.16	0.20	VEN	GRDA	FG	polymetallic vein containting 2-8 mm euhedral blackjack sphalerite, blebby pyrite and galena. Zonation cores are observed in blackjack sphalerite crystals. Trace arsenopyrite is also present in vein interval. quartz vein appears to host minerals in vein and was replaced by calcite and interstitial ankerite (calcite replaces quartz vein first then ankerite intrudes into calcite replaced quartz vein and locally brecciates calcite and quartz vein).
116.16	116.52	0.36	GRD	GRDA	MG	moderately argillic, trace potassic granodiorite interval containting a 1 cm , pyrite bearing, calcite infilled vein. Disseminated pyrite is locally observed in vein
116.52	117.18	0.66	GRD	GRDA	MG	moderately potassic granodiorite overprinting weakly argillic and trace propylitic alteration.
117.18	118.00	0.82	VEN	GRDA	MG	Gouged, brecciated, weakly argillic , trace propylitic granodiorite containining pyrite bearing, rhodochrosite infilled, quartz veins. Quartz veins are locally offset by fractures and brecciation. Disseminated pyrite is observed in veins where rhodochrosite partially infills and brecciates pyrite bearing vein.
118.00	118.20	0.20	GRD	GRDA	MG	rubbly interval of trace propylitic granodiorite overprinted by weak argillic alteration. Trace, disseminated pyrite is locally observed within dark grey, gouge seams in rubbly interval.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
118.20	118.77	0.57	GRD	GRDA	MG	gouged, brecciated , weakly argillic, trace propylitic granodiorite interval.
118.77	119.39	0.62	GRD	GRDA	MG	weakly argillic, trace propylitic, competent, granodiorite interval
119.39	120.33	0.94	GRD	GRDA	MG	fractured, rubbly interval of weakly argillic, trace propylitic granodiorite.
120.33	121.40	1.07	BXA	GRDA	MG	gouged, brecciated, weakly argillic, trace propylitic granodiorite interval. Trace, blebby and disseminated pyrite occur within dark grey, fine grained gouged seams and within 2-4 mm, fractured, calcite and ankerite infilled quartz veins.
121.40	125.20	3.80	GRD	GRDA	MG	gouged, brecciated, moderately argillic, weakly potassic granodiorite interval. Local rubbly zones occur from 124-124.40m. Increased potassic alteration occurs at 125m , proximal to polymetallic vein. Trace disseminated pyrite is locally observed in dark grey, gouged seam @ 123.50m.
125.20	125.41	0.21	VEN	VEIN	FG	polymetallic quartz vein containing semi massive sphalerite, pyrite and arseno pyrite. Sphalerite appears to interstitially surround semi massive pyrite and arseno pyrite. Trace, blebby galena is also observed in polymetallic vein. Minor ankerite and calcite infill is locally observed in vein.
125.41	126.35	0.94	VEN	VEIN	FG	rubbly,gouged brecciated , weakly propylitic granodiorite containting semi massive , disseminated pyrite in rubbly zones and within fractured, rhodochrosite infilled, quartz veins.
126.35	127.25	0.90	GRD	GRDA	MG	weakly argillic, trace potassic granodiorite interval
127.25	130.27	3.02	GRD	GRDA	MG	weakly argillic, trace propylitic granodiorite interval with local rubbly, gouged, brecciated zones. Disseminated pyrite is locally observed within rubbly zones and in dark grey, fine grained veinlets and gouged seams.
130.27	132.00	1.73	GRD	GRDF	MG	rubbly , faulted interval of moderately argillic, trace potassic granodiorite.
132.00	133.83	1.83	GRD	GRDF	MG	moderately argillic, trace potassic granodiorite interval with local gouged, brecciated zones.
133.83	134.20	0.37	VEN	VEIN	MG	weakly propylitic granodiorite hosting a polymetallic vein. Granodiorite interval appears gouged and brecciated, polymetallic vein is located along a soft, grey gougy seam (i.e. 134m). Polymetallic vein contains semi massive galena, arsenopyrite, blebby pyrite and sphalerite.smaller,striated galena bleb are observd in vein section (or exsolved lamellae (?)).Ankerite appears to partially infill quartz in vein zone.
134.20	137.16	2.96	GRD	GRDF	MG	weakly potassic, argillic granodiorite with local zones of gougy clay rich seams, gouge and shear brecciation (i.e. 137.10m; shear brecciation observed proximal to rubbly, faulted interval. trace, 1-3 mm, pyrite bearing , sheared veinlets are observed on interval
137.16	138.68	1.52	FLR	GRDF	MG	rubbly interval of weakly potassic, argillic granodiorite (fault(?))
138.68	140.37	1.69	FLR	GRDF	MG	rubbly interval of trace potasic, trace argillic granodiorite. (fault?).

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
140.37	142.00	1.63	FLR	GRDF	MG	fractured, rubbly interval of weakly argillic, trace potassic granodiorite.
142.00	147.33	5.33	FLR	GRDF	MG	Weakly propylitic, argillic granodiorite with local gouged, rubbly and brecciated zones (interval is more competent than previous faulted interval). Blebby and disseminated pyrite is locally observed along fracture surfaces in rubbly zones, within dark grey, gouge seams and sporadically observed in altered granodiorite zones. Small rubbly zones occur at 145.59, 146-146.91m.
147.33	148.00	0.67	GRD	GRDF	MG	trace argillic, propylitic granodiorite interval containting 1-2 mm, dark, fine grained veinlets.
148.00	149.09	1.09	GRD	GRDF	MG	weakly potassic, argillic granodiorite interval
149.09	149.35	0.26	VEN	VEIN	MG	polymetallic vein hosted in weakly phyllic granodiorit (weakly silicified, disseminated pyrite and basal cleavage muscovite grains observed) containing semi massive pyrite, trace sphalerite galena and arseno pyrite. A 6mm, rhodocrosite vein surrounds polymetallic quartz vein. Ankerite appears to locally brecciate a dark smoky quartz vein that runs parallel to rhodocrosite and polymetallic quartz vein. Trace blackjack sphalerite is also observed wihtin rhodocrosite vein.
149.35	152.50	3.15	GRD	GRDA	MG	relatively unalterd granodiorit with intermittent zones of weakl potassic, argillic alteration and local fracture zones. Trace 1-2mm, dark , fine graind bands sometimes containing trace disseminatd pyrite , locally offset by calcite infilled veinlets and fracturs are locally observed (i.e. 151m). Quartz/carbonitic stringer vein zone is present from 152.18-152.50m (no mineralization obsrved).
152.50	158.80	6.30	GRD	GRD	MG	relatively unaltered granodiorite interval with intermittent (no larger than 10cm) zones of trace potassic, argillic alteration and sections of weak propylitic alteration. At 156.29-156.44m,three, 1-2 mm, pyrite bearing, dark grey veinlets are observed in trace potassic, argillic section. Trace, 1-2 mm, calcite veinlets and calcite infilled fractures also occur in interval. Small rubbly section of trace argillic altered granodiorite is observed from 157-157.28m. Some calcite veinlets crosscut through sub-mm pyrite bearing veinlets. Dark red hematitic oxidation is locally observed along join surfaces.
158.80	159.20	0.40	GRD	GRD	MG	weakly potassic, argillic and trace propylitic granodiorite interval.
159.20	160.00	0.80	GRD	GRD	MG	relatively unaltered granodiorite interval (trace chlorite clasts and k-spar)(trace propylitic/potassic(?)). Trace 1-2 mm carboate veins sporadically occur on interval.
160.00	161.47	1.47	GRD	GRD	MG	weakly potassic, weakly argillic graodiorite with local zones of trace propylitic, phyllic alteration. (phyllic alteration proximal to stringer vein zone). Trace 2-3 mm, dark grey , pyrite bearing veinlets surrounded by milky quartz veins are locally observed in interval .

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
161.47	162.63	1.16	GRD	VEIN	MG	weakly argillic, trace propylitic, trace phyllic granodiorite interval containting polymetallic stringer veins which are locally brecciated and partially infilled by calcite. Veins are ~40 degrees tca and contain blebby pyrit, arsenopyrite and trace galena crystals. Pyrite and arsenopyrite occur predominantly in dark grey, fine grained vein that are partially infilled by calcite. Trace pyrite blebs also occur within grd host rock.
162.63	163.21	0.58	GRD	GRDA	MG	weakly argillic, potassic granodiorite interval containing 1-2 mm, pyrite bearing stringer veinlets.
163.21	164.30	1.09	GRD	GRDA	MG	weakly argillic, trace potassic, trace propylitic granodiorite interval.
164.30	166.20	1.90	GRD	GRDA	MG	trace potassic, trace propylitic granodiorite with intermittent zones of weak argillic alteration. Trace 1-2 mm, pyrite bearing, dark grey , fine grained veinlets are locally observed throughout grd interval.
166.20	167.55	1.35	GRD	GRDA	MG	fractured, rubbly interval of trace potassic, trace propylitic granodiorite.
167.55	168.86	1.31	GRD	GRDA	MG	trace potassic, trace propylitic granodiorite with intermittent zones of weakly argillic alteration overprinting trace potassic, propylitic alteration. Trace, 1-2 mm, dark grey, fine grained veinlets contain minor disseminated pyrite.
168.86	169.80	0.94	VEN	GRDA	MG	moderately argillic, weakly propylitic granodiorite interval containin 2-4mm polymetallic vuggy quartz veins. Blebby pyrite is observed in quartz vein adjacent to wilky quartz vuggy vein. Trace galena blebs are contained within vuggy milky quartz vein. Vuggy vein contains sub-mm, dark grey veinlets located at the vuggy vein boundaries. Increased propylitic and trace phyllic alteration is locally observed at the polymetallic vein zones. Light pink, rhodochrote partiallyinfilling polymetallic vein is observed in rubbly zone at 169.20m (vein fragment can be identified here).
169.80	171.58	1.78	GRD	GRDA	MG	weakly argillic, propylitic and tace potassic granodiorite interval containting 1-2 mm, stringer veins (30 degrees TCA). Veins containt trace, disseminated pyrite and are partially infilled by calcite.
171.58	173.90	2.32	GRD	GRDA	MG	trace potassic, trace propylitic granodiorite with small, intermittent zones of weakly potassic, argillic alteration (~ 5 cm). 1-3mm, stringer veins (45 degrees TCA), partially infilled by calcite , contain trace disseminated pyrite.
173.90	174.22	0.32	GRD	GRDA	MG	weakly argillic, trace potassic, propylitic graodiorite interval. Fracturing and small light grey gouge seams are observed proximal to rubbly vein zone
174.22	174.58	0.36	VEN	GRDA	MG	Rubbly, brecciated, polymetallic vein zone containting blebby pyrite, trace arseno pyrite and galena. Pyrite is mostly contained within dark grey, fine grained vein breccia matrix. Sub- angular, ankerite and quartz inclusions are observed within breccia vein zone. Alteration is weakly propylitic, trace phyllic near the contact with breccia vein zone.
174.58	174.82	0.24	GRD	GRDA	MG	weakly argillic alteration in granodiorite overprinting trace phyllic alteration. Trace propylitic alteration occurs @ 174.80m

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
174.82	174.90	0.08	VEN	GRDA	MG	rubbly zone containting polymetallic vein fragments. Vein fragments contain blebby pyrite, trace arsenopyrite and trace galena. Sub-angular, 2-4 mm, ankerite brecciated clasts are contained within polymetallic, rubbly zone. (rubbly vein zone similar to vein zone at 174.22m but fragments are sub-rounded ; cchewed up fragments from drill (cave(?))
174.90	180.57	5.67	GRD	GRDA	MG	Trace potassic, trace propylitic granodiorite interval containing a 5 degrees TCA, calcite/ankerite infilled, brecciated quartz vein. A 2 cm, weakly potassic, argillic alteration halo is observed @ 177.40-177.80m. Thin sub-mm, black magnetic bands are locally observed in granodiorite interval @ 178.85m. Thin , 1-2 mm, dark grey, pyrite bearing veinlets are also present on inteval; blebby pyrite can be seen on vein fractured surface @ 178.31m.
180.57	180.85	0.28	GRD	GRDA	MG	weakly argillic, trace potassic, propylitic granodiorite interval containting sub mm, dark grey veinlets and carbonate infilled veinlets.
180.85	181.72	0.87	GRD	GRDA	MG	weakly phyllic alteration overprinting a weak argillic and trace potassic alteration. Interval is moderately silicified and blebby pyrite is locally observed within grd. Calcite infilling fracture surfaces and sub-mm veinlets is locally observed.
181.72	181.96	0.24	VEN	GRDA	MG	polymetallic vein and brecci zone hosted in weak argillic, trace propylitic alteration overprinting by weakly phyllic alteration (blebby pyrite locally observed in grd and interval appears silicified, basal cleavage muscovit crystals are also locally observed). Semi massive, galena, pyrite and blebby arsenopyrite is observed in vein zone. Trace, honey brown sphalerite predominantly ocurs in semi massive galena vein. Dark grey, fine grained material containting semi massive pyrite appears to brecciate quartz vein locally. Trace ankerite and calcite vein infill is observed.
181.96	182.35	0.39	VEN	GRDA	MG	weakly phyllic granodiorite containting polymetallic veins (30 degrees TCA). Veins contain semi massive galena, blebby pyrite spatially associated with sphalerite and trace arsenopyrite. Honey brown sphalerite is observed in galena vein whereas darker sphalerite (blackjack) is observed with pyrite. Galena crystals appear striated (or exsolved(?) exsolution lamellae(?); rapid cooling leading to exsolving of two cations within galena). Trace calcite and ankerite inclusions in vein zone are locally observed and occur as interstitial infill.
182.35	182.66	0.31	VEN	GRDA	MG	polymetallic vein zone in weakly phyllic granodiorite (vein breccia(?), disseminated pyrite, galena and sphalerite are locally observed within grd, ankerite calcite and quartz clasts occur within grd brecciz zone). A soft, light grey brecciated seam containting fine grained pyrite occurs at 182.50m. Polymetallic vein contains semi massive galena, sphalerite, pyrite and trace arseno pyrite (vein is comprised of 2 mm bands of galena, sphalerite, pyrite-arsenopyrite. Ankerite appears to partially infill a dark, fine grained, pyrite bearing band at the vein boundaries.
182.66	183.58	0.92	GRD	GRDA	MG	trace propylitic granodiorite overprinted by weak argillic alteration. @ 184.44, a quartz vein containting blebby pyrite and trace sub-mm blackjack sphalerite is observed. Interval contains 1-2 mm, calcite infilled veinlets.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
183.58	187.55	3.97	GRD	GRD	MG	trace potassic, trace propyliti granodiorite interval containting 1 - 30 cm, black, fine grained polymictic inclusions. Trae 1 -2 mm, carbonate infilled quartz veins sometimes containting trace pyrite.
187.55	190.00	2.45	GRD	GRD	MG	trace potassic, propylitic granodiorite with trace argillic overprint (unit is similar to previous interval but has increased argillic alteratoin).
190.00	193.95	3.95	GRD	GRD	MG	trace potassic, propylitic granodiorite with intermittent zones of weak argillic, trace phyllic alteration halos around 2mm-1cm stringer veins. Stringer veins are partially replaced by rhodocrosite and contain sub-mm, black, veinlets. Stringer veins contain trace disseminated pyrite. Weakly argillic,phyllic alteration is observed proximal to vein zone contact (193.85-193.95m)
193.95	194.26	0.31	GRD	GRD	MG	weakly argillic, trace propylitic and phyllic granodiorite containing polymetallic quartz veins. Gouged, lightgrey, brecciated seam observed near vein zone @ 194.10m. Quartz veins contain blebby pyrite, trace sphalerite and galena. Vein near gouged brecciated seam is vuggy and partially infilled by light pink rhodocrosite and tan, ankerite
194.26	197.00	2.74	GRD	GRD	MG	trace potassic, trace propylitic, relatively unaltered granodiorite with intermittent weak argillic, trace propylitic alteration halos near stringer vein zones. Stringer veins are 2-5 mm, contain trace pyrite and sphalerite. 2-3mm,ankerite veins parallel to pyrite bearing veins are locally observed.
197.00	200.15	3.15	GRD	GRD	MG	trace potassic, argillic granodiorite interval with local weakly argillic alteratin halos near stringer vein zones. Stringer veins (50 degrees TCA) contain trace pyrite and sphalerite and are partially infilled by carbonates.
200.15	201.20	1.05	VEN	GRD	MG	trace potassic altered granodiorite with weak argillic overprint. Alteration in vein zone is weakly propylitic, trace argillic @ 200.77m. Vein at 200.82m, contains blebby pyrite, trace arsenopyrite, galena, sphalerite and is partially infilled by tan, ankerite. Calcite and ankerite alsoappear to brecciate host grd and vein zone locally. Vein zone at 201, contains semi massive, someties striated galena with interstitial rhodocrosite located adjacent and witin galena rich vein. Disseminated pyrite is observed thourhgout grd interval in vein zone
201.20	213.87	12.67	GRD	GRD	MG	Relatively unaltered grd with trace propylitic, potassic, argillic alteration zones. Some sections of grd appear slightlymore argillic but otherwise remain relatively unaltered. Weak propylitic alteration halos are observed in2-4 mm, pyrite bearing quartz veinlets. Black, fine grained magnetite bands are locally observed on interval as well
213.87	214.51	0.64	GRD	GRD	MG	gouged, brecciated, weakly argillic, trace propylitic granodiorite interval. Trace disseinated pyrite occurs within grd and within light grey, soft, gouged seams.
214.51	216.00	1.49	GRD	GRD	MG	fractured interval of trace potassic, trace propylitic relatively unaltered granodiorite. Trace 1-2 mm, quartz veinlet containing trace disseminated pyriteare locally observed.
216.00	216.50	0.50	GRD	GRD	MG	moderately argillic, weakly potassic, fractured granodiorite interval

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
216.50	226.67	10.17	GRD	GRD	MG	trace potasic, trace argillic, relatively unaltered granodiorite interval with locally fractured zones. 1-8cm, medium pink, aplite dyke intrusions occur from 219.60-221m. (aplite dykes not observed in previous intervals. 3mm-1 cm,pyrite bearing , carbonate infilled quartz veins crosscutting and locally offsetting aplite dyke intrusions are locally observed.
226.67	227.40	0.73	GRD	GRD	MG	gouged, sheared, brecciated, moderately argillic, trace propylitic granodiorite containing polymetallic ,sheared veins. Disseminated pyrite, trace arsenopyrite, trace sphalerite areobserved in carbonate infilled quartz veins. Pyrite is also observed in dark grey,soft grained, sheared bands.
227.40	233.63	6.23	GRD	GRD	MG	trace potassic, relatively unaltered granodiorite with local fractured zones(227.40-229.11m). Trace 1mm, pyrite bearing veinlets,and 1-2 m,carbonate veinlets are locally observed.
233.63	234.70	1.07	GRD	GRD	MG	weakly potassic , argillic granodiorite interval .
234.70	235.25	0.55	VEN	GRD	MG	trace phyllic alteration overprinting weakly propylitic granodiorite. Interval is moderately silicified , contains disseminated pyrite in host grd. Interval contains soft,gouged brecciated seams containting disseminated pyrite as well. Vein zone at 234.96m is comprised of blebby galena in quartz vein, milky quartz vein surrounding and partially infilling and brecciating galena bearing quartz vein. Rhodocrosite and ankerite brecciate,partially replace and are interstitially foundin polymetallic quartz vein. Carbonates and quartz appear to brecciate host grd. Blebby pyrite, trace arsenopyrite are observed in breciated vein sections. Honey brown sphalerite is mostly restricted to galena rich areas.
235.25	236.75	1.50	GRD	GRD	MG	trace potassic, trace propylitic, relatively unaltered granodiorite.
236.75	240.16	3.41	GRD	GRD	MG	trace potassic, trace propylitic, rubbly and fractured, relatively unaltered granodiorite interval (fault related(?)).
240.16	241.23	1.07	GRD	GRD	MG	more competent interval of trace potassic, trace propylitic, relatively unaltered granodiorite interval.
241.23	243.17	1.94	GRD	GRD	MG	trace potassic,relatively unaltered granodiorite with trace phyllic,propylitic alteration halos observed near polymetallic vein zones. 1-3 cm, veins containing disseminated pyrite, trace sphalerite and galena are partially infilled and brecciated by rhodocrosite.1 mm, black fine grained bands within carbonate infilled veins are also observed (coloform bands(?)). Gouged,brecciated seam occurs at the contant between relatively unaltered grd and polymetallic vein zone. Disseminated pyrite is also observed within alteration halo zones.
243.17	244.65	1.48	GRD	GRD	MG	trace potassic, relatively unaltered granodiorite interval
244.65	247.30	2.65	GRD	GRD	MG	fractured, relatively unaltered granodiorite interval (trace potasic and trace propylitic local alteredtedzones). 4mm, calcite veinlet (~20 degree TCA) is observed on interval.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
247.30	254.20	6.90	GRD	GRD	MG	relatively unaltered granodiorite interval (trace potassic , trace propylitic(?)) with intermittent zones of weakly propylitic, argillic alteration (mostly as alteration halos near stringer vein zone). Vein (50 degrees TCA) , contain disseminated pyrite, are partially infilled by calcite and ankerite and locally brecciate host grd. Light pink aplite dyke intrusion is observed at 250.04m. Disseminated pyrite also occurs in sub-mm, dark, fine grained bands.
254.20	255.46	1.26	GRD	GRD	MG	weakly propylitic alteration overprinting a weak argillic alteration in granodiorite. Section appears weakly silicified and disseminated pyrite and pyrite blebs are observed throughout grd host. 2mm-1 cm, carbonateinfilled veins, containting pyrite and brecciating host grd are locally observed. Ankerite and calcite appear to brecciate pyrite bearing quartz veins as well.
255.46	266.54	11.08	GRD	GRD	MG	relatively unaltered granodiorite interval with smalllocal zones of trace propylitic alteration. Trace 1-2 mm, quartz veinlets containing disseminated pyrite are sporadically observed on interval
266.54	267.74	1.20	VEN	VEIN	MG	trace potassic granodiorite with weakly to moderate propylitic alteration halos near quartz stringer veins. Trace phyllic alteration occurs proximal to grd, vein breccia contact (gouged, brecciated contact). Stringer veins are partially infilled by calcite, and contain blebby pyrite, galena and tracce arsenopyrite (mostly on veins proximalto vein brecia zone).
267.74	268.94	1.20	BXA	VEIN	MG	dark grey, polymictic,polymetallic, moderately silicified ven breccia zone. Clasts observed in breccia zone include, pyrite bearing, chloritized clasts, light grey, irregular, cilified clasts, propylitic altered grd host, ankerite, rhodocrosite, dark grey clasts and calcite. Trace, galena, arsenopyrite, sphalerite and pyrite are observed in vein breccia zone (more abundant in lower vein breccia zone where rhodocrosite and ankerite are more prominent). Ankerite appears to brecciate dark grey brecciated clasts (i.e. 269.63m). Rhodocrosite is observed as breccia clasts and partiallyinfilling polymetallic vein zones. Veins appear to be sheared and locally crosscut by calcite infilled fractures.
268.94	270.50	1.56	GRD	VEIN	MG	locally gouged, moderately propylitic, weakly argillic granodiorite interval containing trace 1 cm, pyrite bearing quartz vein. A greenish, brown, fine grained dyke(?) inclusion occurs in grd interval.
270.50	270.90	0.40	VEN	VEIN	MG	2-4mm, weakly sheared, polymetallic, stringer vein zone in moderate propylitic granodiorite, overprinted by trace phyllic alteration(?) (appears weaklysilicified, contains disseminated pyrite and basal cleavage crystals are observed (muscovite(?)). Stringer veins are 40 degrees TCA and contain blebby pyrite, trace galena, arseno pyrite and sub-mm sphalerite. Polymetallic veins appear to brecciate host grd and are infilled and brecciated by ankerite and light pink, rhodocrosite infill.
270.90	271.52	0.62	GRD	VEIN	MG	weakly argillic granodiorite overprinting a weak propylitic alteration.
271.52	274.96	3.44	GRD	GRD	MG	relatively unaltered granodiorite with intermitten zones of trace potassic alteration.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
274.96	277.90	2.94	GRD	GRD	MG	trace potassic granodiorite with intermittent zones of weak argillic, potassic and weak propylitic trace phyllic alteration (mostly as alteration halos near stringer veins). Stringer veins are ~ 40 degrees TCA and contain blebby pyrite and trace , sub-mm sphalerite.
277.90	280.50	2.60	GRD	GRD	MG	weakly potassic, weakly argillic granodiorite with intermittent zones of weak propylitic and trace argillic alteration (mostly as alteration halos in stringer vein zones) . Stringers veins are ` 60 degrees TCA and containt bleby pyrite, galena,honey brown sphalerite and trace arseno pyrite (i.e. 278.45m).
280.50	281.80	1.30	GRD	GRD	MG	weakly argillic, weakly propylitic granodiorite containting polymetallic stringer veins. Polymetallic veins contain trace blebby pyrite, trace galena, sphalerite. Light grey,gouged brecciated seam is observed @ 281m. Ankerite appears to locally brecciate and infill pyrite bearing veins. Poymetallic veins alsocontain 1 mm, black , fine grained dendritic magnetite bands.
281.80	282.02	0.22	VEN	GRD	MG	polymetallic vein containting semi massive galena, pyrite, sphalerite and trace arsenopyrite. Rhodocrosite interstitiallyinfills polymetallic vein and locally brecciates pyrite bearing quartz veins. (rhodocrosite is spatially associated with honey brown sphalerite and galena. Fracturing is observed in polymetallic vein zone.
282.02	283.40	1.38	GRD	GRD	MG	weakly argillic, weakly propylitic granodiorite interval containing thin 1-2mm, dark fine grained pyrite bearing veinlets. A fractured, brecciated granodiorite section proximal to polymetallic vein contact is observed. Calcite infill fractures surfaces which locally crosscut through quartz veinlets.
283.40	283.53	0.13	VEN	GRD	MG	polymetallic vein zone containing semi massive galena, pyrite, honey brown sphaerite and trace arsenopyrite blebs. Trace,light pink, rhodocrosite partially infills polymetallic quartz vein. From 283.46-286.53 vein locally brecciates host grd (less pyrite, galena and sphalerite observed,mostly occur as disseminations within vein breccia section. Calcite infilled fractures crosscut through vein breccia zone.
283.53	284.99	1.46	GRD	GRD	MG	weakly argillic, trace propylitic granodiorite with intermittent zones of weak propylitic alteration. 1-3mm, stringer quartz veins containting blebby pyrite, trace galena and sphaerite, partially replaced by carbonate (light pink rhodocrosite and calcite) are locally observed. Vein @ 284m,contains bright pink/orange, soft, interstitial infill in quartz vein.
284.99	292.80	7.81	GRD	GRD	MG	trace potassic, relatively unaltered granodiorite with weak argillic, propylitic alteration halos in pyrite bearing, stringer quartz vein zone.
292.80	297.00	4.20	GRD	GRD	MG	locally fractured, trace potassic granodiorite with intermittent zones of moderate to strong propylitic alteration. Pyrite blebs and sub-mm sphalerite are observed in 4mm stringer vein within propylitic altered granodiorite zone at 293m. Vein contains bright pink/orange inclusions at vein boundaries. Calcite infililng fractures iscommonly observed. Dark red hematite alteration is commonly observed in fracture and joint surfaces.
297.00	302.68	5.68	GRD	GRD	MG	similar to previous interval but less fractured. Trace potassic granodiorite with intermittent zones of moderate to strongly propylitic alteration. Pyrite, trace sphalerite are observed in carbonate infilled, quartz veins in propylitic granodiorite zones.

From (m)	To (m)	Interval (m)	Rock Type	Unit Type	Grain Size	Description
302.68	304.80	2.12	GRD	GRD	MG	moderately propylitic granodiorite with intermittent zones of weak potassic, argillic alteration. Blebby pyrite is observed in arbonate infilled, quartz veins in propylitic altered grd. Calcite infiled veins locally brecciate host grd
304.80	309.27	4.47	GRD	GRD	MG	trace potassic, trace propylitic granodiorite with intermittent zones of weak propylitic,argillic alteration. Trace, calcite and rhodocrosite infilled quartz vein containting trace pyrite are locally observed(i.e. 308.55m).1-3 mm, dark, pyrite bearing bands are commonly observed in least altered grd zones
309.27	310.10	0.83	GRD	GRD	MG	rubbly interval of weakly potassic, trace propylitic granodiorite. Dark red, hematite oxidation is commonly observed in rubbly interval.
310.10	311.96	1.86	GRD	GRD	MG	trace potassic, trace propylitic granodiorite interval containing trace 1-2mm,dark , pyrite bearing bands. Dark red hematite oxidation occurs along fractures, joint surfaces.
311.96	313.34	1.38	GRD	GRD	MG	weakly propylitic,trace phyllic granodiorite with intermittent zones of trace potassic, weakly argillic alteration. Blebby pyrite,trace galena and sphalerite are observed in calcite infilled, quartz veins. Veins are 40 degrees TCA.
313.34	313.80	0.46	GRD	GRD	MG	gouged, brecciated vein section in trace propylitic, argillic granodiorite. Blebby pyrite, sphalerite, galena and trace arsenopyrite are observed in vein zone @ 313.65m ankerite and rodhcrosite inclusions within polymetallic quartz veins are observed. Ankerite appears to locally brecciate host granodiorite. Trace phyllic alteration observed in polymetallic vein zone (disseminate pyrite in grd , increased quartz clasts and some basal cleavage (muscovite(?) are observed).
313.80	317.81	4.01	GRD	GRD	MG	trace potassic granodiorite interval containting 1-2 mm, black, fine grained, pyrite bearing veinlets. Weak propylitic, argillic alteration halo occur in pyrite bearing vein zones.
